CHAPTER 1 ·

DEVIL FRUITS

A single bite can change a pirate's destiny.

Some become rubber, some transform into legendary creatures, and others gain the power of a natural element. No two Fruits are identical, but they all share one characteristic: they grant extraordinary abilities in exchange for a permanent vulnerability to the sea.

In Grand Line Chronicles, Devil Fruits are customisable powers. The player defines their concept together with the Game Master, while the Fruit Die, Talents and Technique Builder govern their growth.

The Fruit does not replace the character's Combat Style. It adds to their abilities, allowing them to develop a unique way of fighting.

1.1 · OBTAINING A DEVIL FRUIT

Possessing a Devil Fruit is optional and requires the Game Master's approval.

The character can start the campaign with a Fruit or obtain one during the adventure.

When they acquire the power, the player must define its fundamental characteristics.

CHARACTERISTIC	DESCRIPTION
Name	The Fruit's name.
Type	Paramecia, Logia or Zoan.
Description	The nature of the power and its possibilities.
Fruit Die	The Grade of mastery over the power.
Trait	The fundamental ability associated with the type.
Signature	An effect that activates under the specified conditions.
Talents	Abilities acquired through growth.

The Fruit does not have to focus on combat.

An apparently modest power can prove useful in exploration, navigation, crafting objects or social interactions.

Its effectiveness depends on the applications the character develops.

1.2 · THE THREE FRUIT TYPES

Devil Fruits belong to three categories.

PARAMECIA

THE UNIQUE POWER

Grants an extraordinary property to the body, allows a substance to be produced, or modifies matter and the environment.

LOGIA

THE ELEMENT

Allows the user to become and control a natural element, gaining its properties.

ZOAN

THE TRANSFORMATION

Allows the user to assume an animal form and a hybrid form, modifying the body and physical abilities.

Each type has its own Trait, Signature and Talent Tree.

Mythical and Ancient Fruits belong to the Zoan category, but can gain special characteristics through the abilities provided by their Tree.

1.3 · WEAKNESSES AND INTERACTIONS

Devil Fruit users share two fundamental weaknesses: the sea and Agalmatolite, known as Seastone.

THE SEA

When a user falls into water and remains submerged, they lose all their strength, cannot swim and become helpless. They cannot take main Actions, Bonus Actions or Reactions, or make voluntary Movement. They need to be rescued.

A Fish-Man or Merman can continue breathing underwater and does not drown, but still loses the ability to swim and remains helpless on the seabed until removed from the water.

AGALMATOLITE · SEASTONE

Contact with Seastone deprives the user of their actions, just like immersion. Contact during an opponent's turn causes them to lose the actions of their next turn, including their main Action, Bonus Action and Reactions. If contact continues, the character keeps losing all actions and cannot move voluntarily until freed.

A single contact does not impose permanent paralysis: once the loss of the next turn has elapsed, if the character is no longer touching Seastone they can act again. Continuous contact renews the condition.

HAKI AND INTERACTION WITH FRUITS

Haki is not a weakness equivalent to the sea or Seastone. Armament allows the body of a Logia to be struck despite ordinary intangibility, according to the Colour's rules, but does not automatically remove actions or indiscriminately cancel all the Fruit's properties or powers.

1.4 · THE FRUIT DIE

The Fruit Die represents the character's level of mastery.

It does not determine which power they possess, but how well they can control it.

An inexperienced user might produce their element without being able to shape it precisely. An expert could instead use it in completely different ways.

PROGRESSION FOLLOWS THIS SCALE:

DIE	MASTERY
d4	The power has manifested.
d6	The character is beginning to understand it.
d8	Reliable control.
d10	Advanced mastery.
d12	Expert mastery.
d20	The pinnacle of the power, required for Awakening.

The Fruit Die normally starts at d4.

1.4.1 · HOW IT GROWS

The Fruit Die is not increased by spending Ability Points.

The Game Master determines its advancement when the character's growth warrants it.

An improvement can be associated with training, discovering how the Fruit works, a significant defeat or the end of a story arc.

The die should not increase automatically after every combat.

1.4.2 · WHAT IT DETERMINES

The Fruit Die serves two functions.

It limits Fruit Techniques: no Technique using the Fruit as its Source can exceed its Grade.

It unlocks Fruit Talents: each band of the Tree requires a minimum level of mastery.

TALENT PROGRESSION

d4–d6 · The Gift
The character explores the power's initial possibilities.

d8–d10 · Control
The Fruit becomes more versatile and efficient.

d12 · Mastery
The character develops advanced applications.

d20 · Awakening
It becomes possible to achieve the highest manifestation of the power.

1.5 · BUILDING FRUIT TECHNIQUES

Fruit Techniques use the Builder in Chapter 7, but the Fruit is a special Source. Effects must be consistent with the Power's Core and the Identity Sheet. When the Fruit's nature allows it, the GM can authorise effects, Areas, Ranges or Persistent Zones outside a Style's ordinary catalogue. Authorisation does not remove Grade, slot or ST costs: a Fruit must actually be capable of producing the result.

To create one, the player selects Fruit as the Source and defines the Attribute, Form, Grade and effects.

The Technique must meet three fundamental conditions:

Its Grade cannot exceed the Die of the Attribute used.

Its Grade cannot exceed the Fruit Die.

The chosen effects must be consistent with the power's nature and the Builder's rules.

The Game Master checks the Technique's narrative compatibility.

A Fruit capable of producing wax can create barriers and structures. It cannot freely produce lightning just because the Catalogue contains an effect suitable for an electrical attack.

D4 AND D6 TECHNIQUES

d4 and d6 Techniques have 0 Effect slots and cannot select effects that occupy slots, unless an ability expressly grants an exception.

Effects that occupy slots normally become available from Grade d8, subject to their requirements. Templates authorised by the Source do not occupy slots, but retain their own minimum Grade and cost (§7.9).

This limit concerns constructed Techniques. It does not remove the Fruit's natural Trait or the abilities of Talents already possessed.

COSTS

Fruit Techniques pay the Stamina required by their effects.

Possessing a Fruit does not automatically make every Technique derived from it free.

Specific Talents can reduce or eliminate particular costs.

When an effect included in a Fruit Technique applies a Status that allows a Save, the Threshold is determined by the Technique's Grade, not directly by the Fruit Die (§1.4 of the Game Manual).

1.6 · FRUIT TALENTS

Each Fruit type has a dedicated Tree.

Talents are acquired through Upgrades, choosing those available based on the Fruit Die and meeting any prerequisites.

Reaching a Grade unlocks access to Talents, but does not automatically grant all those in the band.

Talents can represent passive abilities, voluntary activations, Reactions or specific exceptions.

In the V2 system, a Talent requiring voluntary activation normally uses the Bonus Action. When its description specifies a Reaction, free activation or another explicit procedure, that rule takes precedence.

Passive abilities apply automatically when their conditions are met.

CHAPTER 2 ·

DEFINING A DEVIL FRUIT

Choosing Paramecia, Logia or Zoan is not enough to determine how a Devil Fruit works.

Two Paramecia can have completely different possibilities. Two Logia can interact with the environment in different ways because of their elements' nature. Two Zoan can have radically different anatomies, forms of movement and natural abilities.

For this reason, when a Devil Fruit is acquired, the player and Game Master must complete its Identity Sheet together.

This sheet establishes what the Fruit can normally do, what it cannot do and which aspects can later be developed through Techniques and Talents.

The Identity Sheet does not automatically grant numerical bonuses.

It defines the power's natural possibilities.

Techniques and Talents determine advanced mechanical effects instead.

2.1 · FRUIT IDENTITY SHEET

Every Fruit must define at least the following elements.

FIELD	WHAT IT ESTABLISHES
Name	The Fruit's name.
Type	Paramecia, Logia or Zoan.
Power's Core	A sentence describing exactly what the Fruit allows the user to do.
Matter / Phenomenon / Creature	What the power actually represents.
Initial applications	Which families of use are available from acquisition.
Origin of the power	Where it can normally manifest from.
Valid targets	The user, creatures, objects, the environment, existing matter or other categories.
Ordinary reach	The distance over which the power can normally be controlled.
Ordinary quantity	How much matter, surface area or how many elements can be controlled without a specific Technique.
Ordinary duration	How long what is created or modified normally lasts.
Control precision	How finely the power can be manipulated.
Interaction with living beings	Whether and how the power can directly modify a living body.
Permanence	What happens to creations or modifications when control ends.
Structural limitations	What the Fruit cannot do or the conditions required to use it.
Natural Backlash	Any consequences the power causes in the user's body.

All these elements must be established when the Fruit is introduced or before they become relevant during play.

A definition should not be:

"I can control wax."

It should be something like:

“I can produce wax from my body and shape what I have produced. I can control it within my normal reach, create simple objects and let it solidify. I cannot control any wax that exists in the world, and I cannot directly modify the body of a living creature.”

This way, the player and Game Master already know what naturally belongs to the Fruit and what requires further development.

2.2 · NARRATIVE POSSIBILITIES AND MECHANICAL EFFECTS

The Identity Sheet grants narrative permissions, not free bonuses.

A power can allow something without automatically turning that possibility into a numerical advantage.

A character capable of creating wax can make a candle without building a Technique.

They can plug a small hole or leave a wax trail on the ground if there is no real uncertainty.

But creating a barrier capable of blocking an attack, immobilising an enemy or covering an entire zone produces a significant mechanical effect and must be represented by a Technique, a Talent or another appropriate rule.

The fundamental question is:

does this application simply describe what the power can do, or is it producing a mechanical advantage?

If it produces damage, Statuses, forced Displacement, protection, modifiers, Zones, additional attacks or other mechanical benefits, a rule normally comes into play.

2.3 · INITIAL APPLICATIONS

A Fruit does not automatically grant every theoretically imaginable application of its concept.

Its initial Applications must be defined at creation.

A Paramecia could, for example, begin by allowing the user to:

- produce a substance;
- or modify their own body;
- or manipulate an existing material.

Possessing one of these abilities does not automatically grant the others.

If a Fruit initially modifies the user's body, that does not necessarily mean it can also modify other people's bodies.

If it produces a substance, that does not necessarily mean it can control all substances of the same type already present in the environment.

If it alters objects, that does not automatically mean it can alter living creatures.

New families of applications can be obtained through Talents such as Versatile Power and Second Nature.

2.4 · ORDINARY REACH

Every Fruit must have an agreed Ordinary reach.

It can be:

Personal
The power acts only on the user.

Touch
The user must touch whatever is affected.

Defined distance
The Fruit can act within a specified number of metres.

Visible source
The power can be exerted on a valid source the character can see.

Ordinary reach defines the Fruit's normal control.

It does not replace a Technique's Range when the Fruit Sheet authorises a ranged construction.

An offensive Technique, special Area or Range granted by the Fruit continues to follow the Builder and the Source's specific conditions.

2.5 · QUANTITY AND SCALE

The Game Master should not use vague terms such as:

“a lot”, “a large quantity”, “as much as they want”.

The Sheet must provide at least an understandable reference.

For example:

“They can normally manipulate enough to fill a bucket.”

“They can alter a single human-sized object.”

“They can simultaneously control the matter present in an area the size of a room.”

The ordinary quantity is not necessarily an absolute limit.

Techniques, Talents, the Fruit Die and Awakening can allow much greater applications.

It simply establishes how the power normally works.

2.6 · DURATION AND PERMANENCE

The Sheet must specify what happens when the user stops controlling the power.

A generated substance might:

- disappear;
- remain until the end of the scene;
- remain until destroyed;
- or become real, permanent matter.

These possibilities are not equivalent.

Permanently creating tonnes of material has very different consequences for the world from creating a substance that disappears after a few minutes.

If the Fruit can create permanent matter, this property must be explicitly recorded in the Identity Sheet.

Narrative permanence does not replace the rules for Persistent Zones when what remains produces mechanical effects during a battle. Zones are special Source options: the power must actually leave matter, an element or a persistent condition in the environment, and the Sheet must authorise this use.

2.7 · LIVING CREATURES

Directly affecting a living creature is an important property and must be declared.

A power that modifies objects cannot automatically be applied to an enemy's body.

The Sheet must state whether the Fruit can act:

- only on the user;
- on willing creatures;
- on any creature;
- or cannot directly alter living beings.

When the application produces a mechanical effect on a hostile target, normal resolution through Techniques, Saves or other appropriate rules remains necessary.

The mere fact that the power could theoretically affect the body does not allow Defence, HP or combat conditions to be ignored.

2.8 · STRUCTURAL LIMITATIONS AND BACKLASH

These two elements must be distinguished.

STRUCTURAL LIMITATION

A Structural limitation defines how the power works.

Examples:

- must touch the target;
- must see the source;
- can only control matter personally produced;
- does not work on living beings;
- can maintain only one complex creation;
- requires the element to be present;
- cannot exceed a specified quantity.

A Structural limitation is not a side effect.

It is part of the Fruit's identity.

NATURAL BACKLASH

A Backlash is instead a consequence that using the power causes in its owner's body.

Examples:

- dehydration;
- cooling of the body;
- pain caused by extreme transformations;
- temporary loss of sensation;
- overheating.

The Backlash must be defined in the Sheet if it is truly a characteristic of the Fruit.

The GM must not invent it during a scene solely to restrict an unexpected use.

CHAPTER 3 ·

GUIDE TO DEVIL FRUIT TALENTS

Fruit Talents represent specific developments in mastery of the power.

The Identity Sheet establishes what the Fruit can naturally do. Talents expand those possibilities, specialise them, turn them into mechanical advantages or overcome some initial limitations.

Each Talent includes:

Manual Text
The description currently found in the rules.

Purpose
The function the Talent serves within the Fruit's progression.

Definitive clarification
How it should be interpreted and applied during play.

CHAPTER 4 ·

PARAMECIA

THE UNIQUE POWER

Paramecia encompass powers that differ enormously. They can alter the body, produce matter or affect the environment.

Their fundamental principle is creative freedom: the player and Game Master define a recognisable power and develop its applications without turning it into an unlimited collection of unrelated abilities.

4.1 · TRAIT · THE UNIQUE POWER

ALWAYS ACTIVE

The character alters the body, matter or the environment through a power agreed with the Game Master.

The Fruit's nature determines what the character can do.

There is no universal table assigning every Paramecia the same set of effects.

The Trait represents the Fruit's fundamental properties, not an unlock to purchase.

4.2 · SIGNATURE · THE POWER'S MARK

CLEAN HIT · MARGIN +4

When the character scores a Clean Hit with a Fruit Technique, the power leaves an additional consequence consistent with its nature.

This might be a change to the terrain, a status or a zone remaining after impact.

The specific application is defined with the Game Master according to the power possessed.

The Signature does not grant the player permanent access to every effect in the Catalogue: it represents the Clean Hit's special consequence.

If the Signature's consequence is a Status that allows a Save, the Threshold is determined by the Fruit Die (§1.4 of the Game Manual), because the Status is produced by the Signature rather than selected as a Technique effect. A Clean Hit with the Technique is still required.

4.3 · D4–D6 · THE GIFT

VERSATILE POWER

MANUAL TEXT

> **Versatile Power**
> Passive
> You unlock a new application of the Fruit.
> You might learn to use the power at a distance, apply it to your body or use it to defend yourself.
> The new application lets you develop an entire family of Techniques you could not previously build.
> The choice must be consistent with the Fruit's original concept.

PURPOSE

Versatile Power expands the Paramecia's initial possibilities.

It does not directly increase the Fruit's damage, reach or power. Instead, it lets you develop a new way of using an existing power.

DEFINITIVE CLARIFICATION

When the Talent is acquired, the player chooses a new Fruit Application with the GM and adds it to the Identity Sheet.

The Application must logically derive from the Power's Core.

Example:

A Fruit initially allows wax to be produced from the user's body.

Versatile Power could allow the user to:

- remotely control wax already produced;
- use wax as protection;
- coat their own body in wax.

The Talent grants one of these new directions, not all of them at once.

It does not allow new properties to be freely invented every time it is used.

FINE CONTROL

MANUAL TEXT

> **Fine Control**
> Passive · Outside combat
> Add +1 die to appropriate manipulation, traversal, protection and stealth checks when using the Fruit.
> The bonus applies only to activities in which the power actually provides an advantage.

PURPOSE

Represents the precision achieved in everyday use of the Fruit.

It is mainly intended for exploration, infiltration, manipulating the environment and creative uses that are not directly offensive.

DEFINITIVE CLARIFICATION

Fine Control does not grant new Applications.

The character must already be able to perform the action according to their Fruit Sheet.

When a check is required and the power actually provides an advantage, the character adds:

+1 die

to the appropriate check.

Example:

A character capable of manipulating threads could use Fine Control to operate a small mechanism with extreme precision.

However, if their Fruit cannot directly control people's bodies, Fine Control does not allow them to do so.

PASSIVE GIFT

MANUAL TEXT

Passive Gift
Passive · Permanent
The Fruit grants you a permanent property consistent with its nature.
This property does not require Stamina or the use of a Technique.
For example, a rubber body does not conduct electricity.
The player and GM agree exactly which property is gained and what consequences it produces.
Once defined, it remains a permanent characteristic of the character.

PURPOSE

Allows a natural consequence of the power to become a permanent property of the character.

DEFINITIVE CLARIFICATION

The property is chosen when the Talent is acquired and recorded in the Fruit Sheet.

It must derive directly from the power's nature.

For example:

Rubber body → does not normally conduct electricity.

Body made from a buoyant substance → may naturally have particular buoyancy, subject to the normal weaknesses of Fruits.

The property cannot freely equate to:

- general immunity to damage;
- permanent Attribute bonuses;
- existing Talents;
- abilities that do not truly derive from the Fruit's nature.

Once chosen, it does not change from one scene to another.

POWER REFLEX

MANUAL TEXT

Power Reflex
Reaction
1 time per combat
0 ST
When you or an ally within 5 metres are about to be attacked, the Fruit reacts instinctively.
The damage is reduced by one die.
No Technique is required: the power manifests directly through the Reaction.

PURPOSE

Represents an instinctive defensive manifestation of the Paramecia.

The power intervenes immediately to lessen an attack directed at the user or a nearby companion.

DEFINITIVE CLARIFICATION

The phrase:

“The damage is reduced by one die”

means:

all the attack's Damage Dice decrease by 1 Grade.

Progression:

d20	→	**d12**
d12	→	**d10**
d10	→	**d8**
d8	→	**d6**
d6	→	**d4**

d4 is the minimum and does not decrease any further.

Example:

An attack deals:

3d10

Power Reflex turns it into:

3d8

An attack that deals:

d12 + 2d8

becomes:

d10 + 2d6

The Talent modifies the attack's Damage Dice, not the attack roll.

It does not cancel any Statuses, Displacement or other attack effects unless they expressly depend on the damage.

It uses the character's Reaction and can be activated only once per combat.

4.4 · D8-D10 · CONTROL

DUAL USE

MANUAL TEXT

Dual Use
2 ST
Active Talent · Bonus Action
You can apply the power twice during the same Action.
You can choose two targets, two different points on the field, or apply it twice to the same target.
The use must remain compatible with the power you possess and the Technique performed.

PURPOSE

Allows the Paramecia to use both the combat and creative aspects of its power at the same time.

DEFINITIVE CLARIFICATION

The text is clarified as follows:

during the same Action you can make two applications of the Fruit.

Only one of the two can be:

- an attack;
- an offensive Technique;
- an application that deals damage;
- an application that directly produces an offensive Status.

The second application must be narrative or utility-based.

It can, for example:

- move an object;
- generate a small quantity of its substance;
- modify an element of the scenery;
- manipulate something already controlled;
- use a non-offensive property of the Fruit.

Dual Use does not grant:

- two attacks;
- two Techniques;

- two offensive applications on the same target;
- two instances of damage.

The Talent costs:

2 ST

once only.

Any offensive Technique pays all its costs normally.

The second application pays a separate cost only if the ability used already has one.

WHAT REMAINS

MANUAL TEXT

What Remains
Passive
The durations of Fruit Techniques improve without additional costs.

One turn → becomes three turns, without paying the additional 2 ST.

Maintain → the first turn of upkeep is free.

The Talent modifies only the durations to which it applies.

PURPOSE

Specialises the Paramecia in effects that remain on the field or continue acting after their initial use.

DEFINITIVE CLARIFICATION

What Remains modifies only a mechanical duration provided by the Technique.

It does not automatically make anything created by the Fruit permanent.

If a Technique lasts:

1 turn

it instead lasts:

3 turns.

If a Technique requires:

Maintain

the first upkeep cost is not paid.

If the Technique has no duration or upkeep, the Talent provides no benefit.

The matter's natural permanence specified in the Fruit Sheet remains a separate property.

NONE OF MY OWN

MANUAL TEXT

None of My Own
Passive
The Eye of the Storm effect becomes more accessible to your Fruit Techniques.
When you use it:
· It occupies no slots.
· It costs no Stamina.
· It can be selected even before the normal d12 requirement.
The Fruit recognises the character's companions and allows them to be excluded from the effects of their Area Techniques.
Eye of the Storm does not itself grant access to the Area Form: it applies only to a Fruit Technique that already has a valid Area according to the power's nature and the Source's rules.

PURPOSE

Allows the development of a Paramecia particularly precise in using Area Techniques.

DEFINITIVE CLARIFICATION

When using their own Fruit Technique with an Area already authorised by the Source, the character can select Eye of the Storm:

- without occupying Slots;
- without spending ST;
- regardless of the normal d12 requirement.

The player chooses which targets within the Area are excluded from the Technique.

The Talent protects against the Technique's direct consequences.

It does not automatically make allies immune to independent environmental consequences that might later arise from the scene.

For example, being excluded from a fire explosion does not automatically grant immunity to an ordinary building that catches fire after the attack.

4.5 · D12 · MASTERY

NATURAL REACH

MANUAL TEXT

Natural Reach
Passive
Your Fruit has reached a level of control that makes projecting the power more efficient.
You gain three benefits:
· Range effects in Fruit Techniques are free and occupy no slots.
· Area Techniques increase their radius by one step.
· The Chain effect costs 1 ST less.
The Talent does not automatically grant Range to a Technique without it. It removes the cost of the Range actually selected.
Natural Reach does not create a Range or Area the Fruit could not normally produce. The benefits apply only to Fruit Techniques that already have Range, Area or Chain validly authorised by the Source.

PURPOSE

Makes a Paramecia specialising in projecting its power at a distance or onto multiple targets much more efficient.

DEFINITIVE CLARIFICATION

Natural Reach modifies Techniques, not the Ordinary reach on the Fruit Sheet.

A Technique must still have Range, an Area or Chain validly authorised by the Source to benefit from the corresponding improvement.

If it does:

- Range costs 0 ST;
- it occupies no Slots.

Area Techniques increase by one step of the normal template progression, not by an arbitrary amount chosen by the GM.

Chain costs:

1 ST less, down to the normal applicable minimum.

The Talent does not allow free narrative uses at distances beyond the Ordinary reach established in the Fruit Sheet.

COMBAT FORM

MANUAL TEXT

Combat Form
Active Talent · Bonus Action
The character channels the Fruit into a particular mode for the entire scene.
The Form grants a constant benefit consistent with the power and requires Stamina to maintain.
The benefit's value and upkeep cost are defined with the GM according to the Guidelines · Combat Form in Chapter 5.
The Combat Form is not a Technique. It represents the character's state while maintaining the power.

PURPOSE

Allows the Paramecia to turn an application of its power into a maintained combat state.

NO BACKLASH

MANUAL TEXT

No Backlash
Passive
Your Fruit Techniques cost 1 ST less, to a minimum of 1 ST.
In addition, you no longer suffer the side effects your power caused in your own body.
The benefit concerns the Fruit's side effects, not damage received from enemies or external sources.

PURPOSE

Represents the body's complete acclimatisation to its Fruit.

DEFINITIVE CLARIFICATION

Fruit Techniques cost:

–1 ST

to a minimum of:

1 ST.

In addition, only the natural Backlash recorded in the Fruit Identity Sheet is ignored.

The following are not removed:

- Structural limitations;
- touch requirements;
- visibility requirements;
- Reach;
- maximum quantity;
- upkeep;
- Talent costs;
- Technique conditions;
- the sea;
- Seastone;
- Haki;
- consequences caused by enemies or the environment.

No Backlash removes what the Fruit involuntarily does to its user.

It does not remove costs deliberately specified by the rules.

INSTINCTIVE POWER

MANUAL TEXT

Instinctive Power
1 time per scene
Exception to Actions
You can use a Fruit move without spending your main Action, even outside your turn.
The ability modifies the move's Action cost, but does not automatically remove its Stamina cost.

PURPOSE

Allows a sudden, instinctive manifestation of the Fruit outside the normal Action economy.

DEFINITIVE CLARIFICATION

Once per scene you can use a Fruit ability that would normally require:

1 main Action

without spending that Action.

You can do so even outside your turn.

The ability still pays normally for:

- Stamina;
- any PIP or other resources;
- upkeep;
- requirements;
- conditions.

Instinctive Power does not grant:

- an additional turn;
- Movement;
- a second Bonus Action;
- a second Reaction;
- a second complete combat sequence.

It is solely an exception to the Action cost of the single move used.

SECOND NATURE

MANUAL TEXT

Second Nature
Prerequisite: Versatile Power
Passive
The Fruit reveals a second family of applications, completely different from the first.
The new possibility is agreed with the Game Master.
It does not necessarily increase the Fruit's numerical power: it expands its possibilities.
Example: a power initially used to modify the user's body could develop a consistent mode that also affects external materials, if the Fruit's concept allows it.

PURPOSE

Represents one of a Paramecia's most important developments.

Unlike Versatile Power, it does not simply add a new use: it opens a second fundamental family of the power.

DEFINITIVE CLARIFICATION

The distinction is:

Versatile Power → new Application.

Second Nature → new family of Applications.

Example:

Initial Fruit:

modifies the user's body.

Versatile Power:

uses that transformation for protection as well.

Second Nature:

the Fruit's principle can now also be applied to external matter.

The new family is recorded in the Identity Sheet.

From then on it can be used as a narrative basis for creating new Techniques.

Second Nature does not automatically grant Catalogue effects, damage, Statuses or bonuses.

4.6 · D20 · AWAKENING

AWAKENING · PARAMECIA

MANUAL TEXT

Awakening · Paramecia
Ultimate
Requirements: Fruit Die d20, Ambition and the Game Master's permission.
The power reaches its highest manifestation.
For the entire scene, the Paramecia develops an extraordinary effect agreed with the GM, normally linked to the ability to shape the surrounding environment.
Awakening has no universal numerical bonus: its manifestation depends on the Fruit's nature.

Paramecia Awakening is built using the normal Awakening Guidelines.

PURPOSE

Represents the maximum extension of the Paramecia's Core.

Normally, the power stops affecting only the user or immediate target and begins to influence the environment on a much greater scale.

DEFINITIVE CLARIFICATION

Awakening is not improvised when used.

Before the character can acquire it, the following must be defined and recorded:

Awakening Manifestation
What actually happens.

Valid targets
What it can influence.

Area or Reach
How much space it can affect.

Duration
How long the effect lasts.

Mechanical effects
What concrete consequences it produces.

Limitations
What it still cannot do.

Once approved, this becomes that Fruit's specific Awakening.

The GM's permission therefore concerns creating the Awakening, not inventing a different one every time.

CHAPTER 5 ·

GUIDELINES · COMBAT FORM

The Combat Form represents a particular state in which the character continuously uses their Fruit on themselves to modify their way of fighting.

It is not a Technique.

It is not a new Fruit Application.

It is not a reduced form of Awakening.

The Combat Form takes a possibility already present in the Fruit Identity Sheet and focuses it on the character's body, movements or way of fighting.

The Talent must therefore produce a primarily personal benefit.

5.1 · CREATING A COMBAT FORM

When the Talent is acquired, the player and Game Master define the Form together.

The following must be established:

Name

The Form's name.

Manifestation

How the character changes while using the Fruit this way.

Benefit

The concrete advantage gained while the Form is active.

Cost

How much Stamina activation or upkeep requires.

Limitations

Any conditions required to retain its benefits.

Once defined, the Form stays the same.

The character does not choose a different benefit each time they activate it.

5.2 · THE FUNDAMENTAL PRINCIPLE

The Combat Form primarily concerns:

the character themselves.

It can modify:

- their own body;
- their mobility;
- their offensive ability;
- their defensive ability;
- the way they personally use the Fruit;
- or another characteristic directly linked to their combat style.

It is not intended to modify the Fruit's general functioning on a large scale.

5.3 · WHAT A COMBAT FORM IS NOT

A Combat Form does not normally allow the user to:

- extend the power across the entire environment;
- gain new categories of targets;
- transform large quantities of surrounding matter;
- freely change the origin point of Techniques;
- control vast areas;
- permanently alter the battlefield;

- overcome important Structural limitations of the Fruit;
- gain a manifestation equivalent to Awakening.

These developments belong to different abilities and, at the highest levels, to Awakening.

5.4 · DEFINING THE BENEFIT

There is no universal table of Combat Form benefits.

Two completely different Paramecia should not be forced to choose the same bonuses.

The benefit is agreed between the player and Game Master and must derive directly from the chosen Manifestation.

The question to use during creation is:

"How does constantly using this power on my character concretely modify their way of fighting?"

The answer determines the benefit.

ASSESSING THE BENEFIT

The benefit must be significant, because Combat Form is a d12 Talent, but must remain less important than an Awakening.

The GM should consider:

- how often it comes into play;
- how much it modifies attack, defence or movement;
- how many of the character's abilities it influences simultaneously;
- how easily it can be maintained;
- how significant the required Stamina cost is.

A very specific benefit can have a modest cost.

A benefit influencing much of combat should require a greater commitment.

5.5 · ACTIVATION

The Combat Form is activated using:

Bonus Action

Its duration and any upkeep are established when it is created.

It can normally remain active for the entire scene as long as the character can sustain its cost.

If the character can no longer pay the specified upkeep, the Form ends.

5.6 · COMBAT FORM AND TECHNIQUES

The Form modifies the character.

Techniques still determine the specific actions they perform.

Being in Combat Form does not mean being able to apply the following for free:

- damage;
- Statuses;
- Zones;
- Displacement;
- additional attacks;
- or other Builder effects.

If the character wants to produce one of these effects, they still use an appropriate Technique.

The Form can improve how that Technique is performed only if the agreed benefit provides for it.

5.7 · COMBAT FORM AND THE FRUIT SHEET

The Form must respect the Power's Core and Applications already possessed.

It cannot be used as a shortcut to obtain Versatile Power or Second Nature.

If the Fruit cannot normally do something, the Form does not automatically grant that ability.

It can instead raise an already possible personal use to a higher level.

5.8 · EXAMPLE · SPRING BODY

The character possesses a Paramecia that allows parts of their body to be transformed into springs.

They develop:

Compressed Spring

Manifestation

The character continuously keeps their body under tension, compressing limbs and muscles through the Fruit.

Benefit

The player and GM agree on an advantage linked to more explosive movements and attacks.

Cost

A cost consistent with the benefit's effectiveness is defined.

The Form does not allow the character to transform the environment into springs.

It does not modify other characters.

It does not expand the Fruit's general radius.

It enhances only the way the user fights through their own body.

5.9 · EXAMPLE · WAX ARMOUR

The character can produce and shape wax.

They develop a Form in which their body is constantly covered in a reinforced layer.

Manifestation

The wax forms armour shaped to the body.

Benefit

An appropriate defensive advantage is agreed.

Cost

Maintaining the armour requires an agreed amount of Stamina.

The Talent does not automatically allow the entire crew to be protected or the whole battlefield to be covered.

That would be an application on a different scale.

5.10 · COMBAT FORM AND AWAKENING

The fundamental difference is:

Combat Form

The character brings their Fruit into their combat style.

The effect is centred on themselves.

Awakening

The Fruit exceeds some of its normal boundaries and changes the power's relationship with the environment, targets or normal Limitations.

The effect becomes centred on the power itself.

CHAPTER 6 ·

GUIDELINES · PARAMECIA AWAKENING

Awakening represents the maximum evolution of the Fruit's Core.

It is not simply a numerically superior version of normal Techniques.

The power's fundamental principle achieves a scale, freedom or depth that is normally impossible.

Awakening is designed with the Game Master when the character meets the necessary requirements.

It must be fully defined before its first activation.

It is not invented during the battle.

Once approved, it becomes that Fruit's specific Awakening.

6.1 · BUILDING THE AWAKENING

Every Awakening must define:

Name

Identifies the awakened manifestation.

Awakened Principle

States which fundamental characteristic of the Fruit is taken beyond its normal limits.

Manifestation

Describes what happens when Awakening is activated.

Development Families

State which aspects of the Fruit are transformed.

Benefits

Define the agreed mechanical effects.

Area or Reach

Establishes the space within which Awakening can operate, when relevant.

Valid targets

Establishes what can be influenced.

Permanence

Defines what happens to the changes produced when Awakening ends.

Limitations

States what remains impossible.

6.2 · AWAKENING FAMILIES

Families do not grant bonuses.

They identify which boundary of the Fruit is overcome by Awakening.

ORIGIN

Modifies the way or point from which the power can manifest.

COSTS / DISCOUNTS

Modifies the efficiency with which certain Fruit abilities are used.

EXPANSION

Increases the scale on which the power can operate.

This can concern reach, quantity, area, number of targets or other similar characteristics.

DOMAIN

Expands the relationship between the Fruit and compatible matter, environments or phenomena.

DEFENCE

Takes the power's defensive properties beyond normal mastery.

ATTACK

Brings the Fruit's offensive application to a higher manifestation.

CONTROL

Increases the precision, duration, complexity or quantity of controllable manifestations.

6.3 · FAMILIES ARE NOT BENEFITS

If an Awakening belongs to the family:

Domain

this does not mean it automatically gains a particular bonus.

It means the Awakening primarily overcomes a limitation relating to control of the environment.

The specific benefit must be written separately.

The same Family can therefore produce completely different Awakenings.

6.4 · MULTIPLE FAMILIES

An Awakening can involve multiple Families simultaneously when its Manifestation requires it.

The number of Families does not automatically establish its power.

A single major breakthrough can be more influential than several minor improvements.

The GM must assess the Awakening as a whole.

6.5 · MANIFESTATION AND BENEFIT

The Manifestation describes:

what becomes possible.

The Benefit establishes:

what changes mechanically.

The two must be defined separately.

For example:

Manifestation

The character can transfer their Fruit's property to the environment.

This does not automatically establish damage, Statuses, bonuses or penalties.

These must be defined through agreed Benefits or the Techniques used.

6.6 · AWAKENING DOES NOT REPLACE TECHNIQUES

Awakening enormously expands the Fruit's possibilities.

It does not turn every narrative use into a free combat effect.

If the character wants to obtain:

- damage;
- Statuses;
- immobilisation;
- Zones;
- Displacement;
- or other effects governed by the system;
- they must use an appropriate Technique or possess an Awakening Benefit explicitly establishing that consequence.

6.7 · LIVING CREATURES

Awakening does not automatically grant the ability to directly modify living beings.

This ability must derive from the Fruit or be explicitly provided by Awakening.

When used against a hostile target, Defence, Saves, opposed checks or other appropriate rules normally continue to apply.

Awakening does not allow the target's defences to be automatically ignored.

6.8 · PERMANENCE

Every Awakening must establish what happens to its manifestations when the effect ends.

The changes can:

- disappear;
- gradually return to normal;
- remain physically present;
- or produce permanent environmental consequences.

The choice depends on the Fruit and must be defined during design.

Narrative permanence does not automatically extend Statuses, Zones or other mechanical effects.

6.9 · LIMITATIONS

Awakening can overcome some of the Fruit's Structural limitations.

It must specify which ones, however.

All Limitations not expressly modified continue to apply.

The fundamental weaknesses of Fruits always remain in effect.

6.10 · THE PRICE OF AWAKENING

Awakening normally lasts:

1 scene.

At the end:

- the character's Stamina drops to 0;
- the character cannot use the Fruit until their next Long Rest.

Voluntarily ending Awakening before the scene ends does not avoid the specified price.

6.11 · AWAKENING DESIGN SHEET

FIELD	DEFINITION
Name	The Awakening's name.
Awakened Principle	The Fruit's fundamental aspect taken beyond its limit.
Manifestation	What becomes possible during Awakening.
Families involved	Origin, Costs/Discounts, Expansion, Domain, Defence, Attack, Control.
Agreed Benefits	Mechanical consequences defined with the GM.
Area / Reach	Extent when relevant.
Valid targets	What can be influenced.
Living creatures	Whether and how they can be influenced.
Permanence	What remains at the end.
Limits overcome	Limitations modified by Awakening.
Limits retained	Restrictions still in effect.
Price	Consequences at the end of Awakening.

CHAPTER 7 ·

LOGIA

THE ELEMENT

Logia allow the user to become and control a natural element.

The element's nature permanently influences the character's body and their movement, attack and defence possibilities.

Logia Talents primarily develop:

- the elemental body;
- control of the element;
- the relationship with sources of the same element present in the environment.

Not all elements interact with the world in the same way.

When a Talent requires a specific property, this must be consistent with the element's nature.

The Talent does not arbitrarily create new properties simply to make its use possible.

7.1 · TRAIT · THE ELEMENT

ALWAYS ACTIVE

The character becomes and controls their element.

They can use it to strike, including at a distance, and their attacks naturally have its characteristics.

THE FRUIT'S ELEMENTAL NATURE:

Costs no Stamina.

Occupies no Effect slots.

Does not have to be purchased through the Builder.

If the character is made of fire, their attacks naturally have the characteristics of fire. There is no need to purchase narrative permission to produce it separately.

INTANGIBILITY

Attacks without Haki or Seastone can pass through the elemental body.

Depending on the attack's nature and the situation, they can miss entirely or deal half damage.

The GM determines which of the two consequences is appropriate.

Intangibility belongs to the Logia's initial Trait. Reaching an advanced Grade is not necessary to gain it.

7.2 · SIGNATURE · THE ELEMENT SPREADS

CLEAN HIT · MARGIN +4

When you score a Clean Hit using the Fruit, the element spreads across an entire zone.

The effect's manifestation must respect the element's nature and the situation.

The Signature does not automatically assign numerical dimensions or costs not provided by the ability.

7.3 · D4–D6 · THE GIFT

SENSE THE ELEMENT

MANUAL TEXT

Passive

You perceive everything that comes into contact with your element.

You can identify the presence, position and movement of anyone within it, even without seeing them directly.

For example, a character made of mist can perceive someone passing through their cloud.

The ability is not equivalent to seeing through any obstacle: it works through contact with the element.

PURPOSE

Turns the element controlled by the Logia into an extension of their senses.

DEFINITIVE CLARIFICATION

The user perceives through:

- their own elemental body;
- the element they are producing;
- the element they are directly controlling.

An external source does not automatically become part of the Logia's perception merely because it belongs to the same element.

To establish a link with an external source, the character must at least:

be able to see it.

Once that source is under their control, Sense the Element allows them to perceive anything touching it for as long as the link remains valid.

The Talent does not create a sensory network through every manifestation of the same element in the scene, on the island or in the world.

ELEMENTAL BODY

MANUAL TEXT

> **Passive**
>
> Add +1 die to escape, mobility and release-from-capture checks when taking advantage of the nature of your elemental body.

PURPOSE

Allows the element's physical properties to be exploited.

DEFINITIVE CLARIFICATION

The bonus applies only when the element's nature truly offers an advantage.

It does not represent a universal +1 die to every movement check.

Elemental Body also does not automatically grant immunity to Grapples or immobilisation.

That ability belongs to Dispersed Body.

ALWAYS IN FORM

MANUAL TEXT

> **Passive**
>
> Your intangibility becomes instinctive.
>
> It continues to work even when you are caught by surprise, asleep or unconscious.
>
> The Fruit's weaknesses still apply.

PURPOSE

Allows the elemental body to react without the user's conscious will.

DEFINITIVE CLARIFICATION

Intangibility continues to work when the character:

- is surprised;
- has not perceived the attack;
- is asleep;
- is unconscious.

Always in Form modifies when intangibility works.

It does not increase its power or modify normal interactions with Haki, Seastone, the sea or other applicable weaknesses.

FEED ON THE ELEMENT

MANUAL TEXT

> **Passive**
>
> When near a living source of your element, you recover 1d6 Stamina at the start of each scene.
>
> The source must be sufficiently significant and consistent with the Fruit.
>
> A fire user could feed on a blaze or furnace. An ice user could make use of a glacier.
>
> A mere trace of their element is not necessarily equivalent to a living source.

PURPOSE

Rewards the Logia for being in an environment naturally favourable to their element.

DEFINITIVE CLARIFICATION

Recovery occurs:

only once, at the start of the scene.

The source must be a significant presence.

A small quantity of the element is not enough.

A source produced specifically by the user is not automatically considered valid.

The Talent's purpose is to exploit a real environmental condition, not allow the character to generate a recovery source independently.

7.4 · D8–D10 · CONTROL

DISPERSED BODY

MANUAL TEXT

> **Passive**
>
> Your elemental body cannot be grabbed, held, tied or immobilised using ordinary hands, ropes and chains.
>
> You can also pass through any opening your element could pass through.
>
> A smoke Logia, for example, could pass through the cracks in a door.
>
> Haki and Seastone remain effective.

PURPOSE

Takes elemental transformation beyond mere intangibility.

The body truly gains the element's physical characteristics when passing through or escaping ordinary obstacles.

DEFINITIVE CLARIFICATION

The character can pass only through spaces their element could actually pass through.

A smoke Logia can pass through a crack.

This does not mean they can pass through a completely airtight wall.

The possibility is determined by the element's properties.

Haki and Seastone continue to work normally.

ABSORB

MANUAL TEXT

> **Passive**
>
> When you suffer an attack made of your own element, you take no damage.
>
> Instead, you recover 1d6 Stamina.
>
> The Talent requires the attack to actually use the element corresponding to your Fruit.

PURPOSE

Represents the Logia's complete compatibility with their own substance or phenomenon.

DEFINITIVE CLARIFICATION

The attack must actually consist of the same element.

Mere affinity is not enough.

A fire Logia can absorb fire.

This does not automatically mean they can absorb magma, explosions, lightning or other energy sources.

The Fruit Sheet establishes what truly belongs to the element.

Absorb cannot be deliberately exploited through attacks by the character themselves or an ally made solely to generate Stamina.

OMNIPRESENT ELEMENT

MANUAL TEXT

Passive

Your Fruit Techniques no longer have to originate from your body.

They can manifest through any source of your element present in the scene.

The new origin must be compatible with the Fruit's nature and the element's availability in the environment.

The Talent does not automatically remove Technique costs or the requirements of their effects.

PURPOSE

Allows environmental sources of the element to be used as new origin points for Techniques.

DEFINITIVE CLARIFICATION

The source must:

- actually consist of the Fruit's element;
- be present in the scene;
- be visible to the character at the moment of use.

A hidden source cannot be used merely because the character knows it exists.

When used, that source becomes the Technique's origin point.

When relevant, the following are therefore calculated from that point:

- line of fire;
- cover;
- direction;
- Area;
- distances.

Omnipresent Element does not automatically grant permanent control of every source in the scene.

REFORM ELSEWHERE

MANUAL TEXT

Reaction
1 time per combat
15 metres
Grade d10

When an immediate, perceptible event occurs to which the character can reasonably react, they can use their Reaction to dissolve their body and reform at a point they can see within 15 metres.
Reform Elsewhere has no single universal trigger. It can be used in response, for example, to a declared attack, sudden danger, a collapse, an explosion, hostile movement or another event that genuinely leaves room for a Reaction. The Game Master determines case by case whether the event is sufficiently immediate and perceptible to allow its use.

This Displacement does not require the main Action and does not provoke Reactions triggered by Displacement. The arrival point must be visible and genuinely reachable by the Logia's manifestation; Reform Elsewhere does not automatically allow conditions or obstacles to be crossed that the element's nature would not permit.

PURPOSE

It is the Logia's primary reactive mobility ability.

7.5 · D12 · MASTERY

ELEMENTAL DOMAIN

MANUAL TEXT

Passive

The character gains advanced control over the element already present in the environment.

They can affect its properties and distribution to modify the scene's conditions.

Applications include manipulating terrain, creating or modifying cover, feeding or extinguishing elemental sources and using environmental resources.

The Talent expands control over the element, but does not automatically assign numerical damage, dimensions or durations.

PURPOSE

Allows the Logia to stop depending solely on the element generated by their body and exercise much more advanced control over existing natural sources.

DEFINITIVE CLARIFICATION

Elemental Domain expands what can be controlled.

It does not automatically make the mechanical effects resulting from that control free.

Purely narrative changes can be made through the Talent.

However, when the use is intended to generate:

- damage;
- Statuses;
- Zones;
- immobilisation;
- cover with mechanical effects;
- or other regulated consequences;
- normal Techniques or other appropriate rules are used.

Elemental Domain does not automatically allow other matter to be transformed into the user's element.

WHOEVER TOUCHES YOU

MANUAL TEXT

Passive · Defence

The nature of your element is dangerous even to those who can hit you.

When an enemy hits you in melee with bare hands or another part of their body, they suffer:

1d6 Damage of your element.

PURPOSE

Turns the elemental body itself into a hazard for anyone making direct physical contact with the Logia.

DEFINITIVE CLARIFICATION

The damage applies:

once for each attack that makes direct physical contact.

The number of blows described narratively does not increase the number of activations.

A weapon normally prevents direct contact with the attacker's body.

COMPATIBILITY

The Talent must make sense for the element.

For some elements, the consequence of contact is immediate.

For others, it might not be.

The GM must not invent a harmful property the element does not possess simply to make the Talent usable.

If contact with that element cannot reasonably cause damage, the Talent may not be appropriate for that particular Logia.

INEXHAUSTIBLE SOURCE

MANUAL TEXT

Prerequisite: Feed on the Element
Passive

When inside or immediately beside a large source of your element, your Fruit Techniques cost no Stamina.

The benefit concerns Fruit Techniques and requires the source to actually be available.

A small or purely decorative source does not automatically meet the condition.

PURPOSE

Turns the Logia's ideal environment into a condition of energy dominance.

DEFINITIVE CLARIFICATION

The source must be:

- large;
- significant;
- actually present in the environment.

The character must be inside or immediately beside the source.

A source deliberately created by the character does not automatically become valid.

The benefit concerns only:

Fruit Techniques.

It does not automatically remove Talent costs, Haki costs or other resource costs.

LOST FORM

MANUAL TEXT

Active Talent · Bonus Action

The character completely disperses their body into the element.

They can assume the form of a cloud, current, dispersed flame or another consistent manifestation.

The transformation lasts an entire scene.

During this state:

- they cannot hold or use objects;
- they cannot make attacks;
- they can move wherever their element can reach;
- they can pass through barriers that are not airtight;
- they cannot be recognised by their normal appearance.

Returning to the ordinary form requires a main Action.

PURPOSE

It is an ability for dispersal, infiltration and mobility.

It is not an offensive form.

DEFINITIVE CLARIFICATION

The phrase:

“they can move wherever their element can reach”

describes the possible routes.

It does not grant unlimited movement.

The character normally continues to follow their Movement unless an ability states otherwise.

During Lost Form they cannot:

- attack;
- use offensive Techniques;
- hold or use objects.

The element's nature determines which barriers can be crossed.

7.6 · D20 · LOGIA AWAKENING

AWAKENING · LOGIA

Ultimate

Requirements: Fruit Die d20, Ambition and the Game Master's permission.

The character reaches the highest manifestation of their element.

During Awakening, the element no longer represents only the character's body or what they directly control.

Its presence invades and modifies the surrounding environment.

Logia Awakening is built using the normal Awakening Guidelines.

The following must therefore be defined before acquisition:

- Name;
- Awakened Principle;
- Manifestation;
- Families involved;
- Agreed Benefits;
- Area or Reach;
- Valid targets;
- Permanence;
- Limits overcome;
- Limits retained;
- Price.

Awakening is not improvised during activation.

THE DISTINCTIVE CHARACTERISTIC OF LOGIA AWAKENING

Every Logia Awakening has one fundamental characteristic:

ELEMENTAL SATURATION

During Awakening, the character's element invades the environment within the Area established in their Awakening Sheet.

The specific manifestation depends on the element.

A fire Logia could fill the zone with heat, flames and combustion.

An ice Logia could gradually transform the environment into a frozen expanse.

A smoke Logia could saturate the space with a dense, persistent mass.

There is no universal Area size.

Its extent is defined through the normal Awakening Sheet.

HOSTILE ENVIRONMENT

Elemental Saturation changes the scene's conditions.

Every Logia Awakening must therefore define one or more environmental effects consistent with the element's nature.

These effects are not universal.

They vary from Fruit to Fruit.

They can be represented through Conditions suited to the element's nature or other mechanical consequences agreed with the Game Master.

For example:

- an element that obstructs sight could produce a Condition relating to perception;
- an extremely cold element could produce consequences consistent with freezing or restricted movement;
- a suffocating element could produce a consequence appropriate to breathing;
- an element causing fear, pain, corrosion or other reactions must use a consequence consistent with those properties.

The chosen Condition must be defined when Awakening is created.

It cannot freely change every turn.

APPLYING CONDITIONS

When Hostile Environment applies a Condition to a hostile creature, the normal rules for that Condition are used.

If Hostile Environment applies a Condition using the normal Status Save, the Threshold is determined by the Fruit Die. An Awakening Sheet can state its own Threshold only when the specific Condition or the power's nature requires a different rule. Since Awakening normally requires the pinnacle of the Fruit Die, a d20 Logia Awakening normally uses Threshold 11 for Conditions allowing Saves that have no specific rule.

Awakening does not automatically allow the normal defences provided by the system to be ignored.

The player and Game Master must establish in the Awakening Sheet:

- which Condition can be applied;
- under which circumstances;
- when it is checked;
- how it can be removed or overcome.

AWAKENING FAMILIES

In addition to Elemental Saturation and Hostile Environment, Logia Awakening follows the normal Families in the Awakening Guidelines:

Origin

Costs / Discounts

Expansion

Domain

Defence

Attack

Control

Families do not automatically grant any bonuses.

They identify only which aspects of the element are taken beyond normal mastery.

The specific Benefits are agreed between the player and Game Master.

EXAMPLE · FIRE AWAKENING

Awakened Principle

The presence of fire no longer depends only on the user's body or the individual sources controlled.

Manifestation

Flames gradually invade the environment.

Elemental Saturation

Fire occupies and modifies the Area defined in the Awakening Sheet.

Hostile Environment

The player and GM establish a consequence appropriate to heat and flames and define any applicable Conditions.

Families

For example, Expansion, Domain, Origin or other appropriate Families can be chosen.

The specific Benefits are defined separately.

Awakening does not automatically grant all these advantages merely because it belongs to the Logia category.

EXAMPLE · SMOKE AWAKENING

Awakened Principle

Smoke becomes a dominant presence across the entire zone.

Manifestation

An increasingly dense mass invades the environment and remains for as long as Awakening is active.

Elemental Saturation

Smoke occupies the space according to the Area and Reach defined in the Sheet.

Hostile Environment

Awakening can use Conditions consistent with visibility, breathing or other properties the element actually possesses.

The exact conditions must be established beforehand.

THE PRICE OF AWAKENING

Awakening normally lasts:

1 scene.

At the end:

- the character's Stamina drops to 0;
- the character cannot use the Fruit until their next Long Rest.

Voluntarily ending Awakening early does not avoid the specified price.

FINAL STRUCTURE OF LOGIA AWAKENING

Logia Awakening therefore consists of two levels.

Logia Identity

Elemental Saturation.

Hostile Environment consistent with the element.

Custom construction

Everything else follows the normal Awakening Guidelines and is built through agreed Manifestation, Families, Benefits and Limitations.

This way, all Logia Awakenings share the same philosophy without becoming mechanical copies of the same power.

CHAPTER 8 ·

ZOAN

Zoan allow the owner to transform into an animal creature and combine its characteristics with their own body.

Their development is primarily linked to:

- physical strength;
- resilience;
- mobility;
- senses;
- natural weapons;
- instincts;
- the creature's biological characteristics.

Every Zoan has three fundamental forms:

Human Form
The character's ordinary appearance.

Hybrid Form
Combines human anatomy with the creature's characteristics.

Beast Form
Fully assumes the creature's form.

8.1 · CREATURE SHEET

When defining a Zoan, the player and Game Master complete a brief Creature Sheet.

The following must be specified:

Species

The creature represented by the Fruit.

Category

Ordinary, Ancient or Mythical.

Beast Size

The size reached by the Beast Form.

Anatomy

Claws, fangs, horns, wings, a tail, shell, quills or other characteristic structures.

Movement modes

Running, flying, climbing, burrowing or other forms of locomotion.

Characteristic senses

Smell, sight, hearing, echolocation, vibration perception or other senses belonging to the species.

Natural abilities

Biological characteristics the creature naturally possesses.

Heritage

For Ancient and Mythical Zoan, the exceptional characteristics that can be developed as the Fruit grows are also recorded.

8.2 ·

ANATOMY AND MECHANICAL ADVANTAGES

The creature's physical characteristics actually exist when the character assumes an appropriate form.

A bird Zoan has wings.

A feline Zoan has claws.

A horned Zoan truly has those horns.

A Zoan with a shell truly has that structure.

This grants the normal narrative possibilities arising from the anatomy.

It does not automatically grant numerical bonuses.

For example:

- having wings allows flight, but does not automatically increase Movement;
- having claws allows their physical use, but does not automatically make them Natural Weapons of a Grade equal to the Fruit;
- having a shell does not automatically grant Damage Reduction;
- having a developed sense of smell does not automatically allow hidden creatures to be located within a fixed distance.

Talents turn these natural characteristics into specific mechanical advantages.

8.3 · TRAIT · THE THREE FORMS

Free

The character can transform into their Hybrid or Beast Form and return to Human Form.

The transformation:

- costs no Stamina;
- occupies no Effect Slots;
- requires no Technique.

A normal transformation uses the main Action.

In Hybrid or Beast Form, the body assumes the creature's appropriate anatomical characteristics.

8.4 · SIGNATURE · THE OVERWHELMING BLOW

Clean Hit · Margin +4

When the character scores a Clean Hit while in Hybrid Form, they choose one of the following effects:

Stun

The target becomes Stunned.

Additional damage

Add 1 Damage Die to the attack.

The character chooses only one effect.

The Signature requires Hybrid Form.

8.5 · D4-D6 · THE GIFT

HYBRID FORM

Active Talent · Bonus Action

Assume Hybrid Form and fully exploit the combination of human and animal anatomy.

For the entire scene you gain:

+1 die to physical rolls based on Strength and Athletics.

+1 Damage Die to melee attacks.

The damage benefit applies to attacks compatible with Hybrid Form.

The Talent does not automatically modify all Attributes.

Hybrid Form can be assumed even without this Talent.

The Talent represents the ability to use it as a true combat configuration.

ANIMAL INSTINCT

Passive

The creature's instincts become a natural part of the character's behaviour.

During exploration, add:

+1 die

to appropriate checks for:

- Observation;
- Survival;
- pursuit.

The bonus applies only when the creature's instincts truly provide an advantage.

You can also deal with normally difficult environments and terrain when the creature's nature warrants it.

For example:

- an arboreal creature can move easily among trees and branches;
- a mountain creature can tackle steep surfaces;
- a predator can track prey more effectively.

Animal Instinct does not replace Animal Senses.

THREE FORMS

Free
1 time per turn

You can freely switch between Human, Hybrid and Beast Form once per turn, without consuming the main Action.

The change can occur even during a sequence of blows.

The Talent does not grant new Actions or allow unlimited transformations in the same turn.

Changing form uses the Bonus Action and costs no Stamina.

CLAWS AND FANGS

Passive

The Zoan's natural offensive characteristics become true Natural Weapons.

They can include:

- claws;
- fangs;
- horns;
- a beak;
- a tail;
- spikes;
- quills;
- pincers;
- stingers;
- other structures appropriate to the creature.

When you acquire the Talent, record the Natural Weapons available in the appropriate forms.

NATURAL WEAPON SHEET

For each Natural Weapon specify:

Name

Anatomical part

Available form

Weapon type

Grade

Attribute

Reach

GRADE

The Natural Weapon's Grade equals the:

Fruit Die.

A d8 Zoan therefore has d8 Natural Weapons.

A d12 Zoan has d12 Natural Weapons.

WEAPON TYPE

Each Natural Weapon is associated with one of the system's normal weapon types.

ANATOMY	APPROPRIATE TYPE
Claws, fangs, natural blades, sharp beak	Blade
Hooves, headbutts, heavy tail, animal fists	Blunt
Long horns, stingers, piercing fangs	Polearm
Quills or projectiles produced directly by the body	Ranged
Anatomical parts detached and thrown	Thrown
Tongues, prehensile tails, tentacles and unusual anatomies	Special

The classification is chosen when the Natural Weapon is recorded and does not change from one attack to the next.

REACH

Melee Natural Weapons normally use the reach appropriate to the Zoan's Form and Size.

If the Natural Weapon can be used at a distance, its Reach is recorded when the Talent is acquired.

For example, a creature capable of shooting quills can have a Ranged Natural Weapon.

CHARACTERS WITHOUT THE FIGHTER ROLE

Natural Weapons represent an exception to normal Arsenal limitations.

A character can make basic attacks with their Natural Weapons even without the Fighter Role.

Natural Weapons:

- do not occupy Arsenal places;
- do not require a Combat Style to be used in a basic attack;
- cannot normally be disarmed.

Claws and Fangs does not, however, automatically grant:

- Swordsman Techniques;
- Crusher Techniques;
- Sniper Techniques;
- Talents belonging to Combat Styles.

The character can fight effectively through their Zoan body without automatically becoming a specialised Fighter.

8.6 · D8–D10 · CONTROL

ANIMAL SENSES

Passive

The creature's characteristic senses reach an exceptional level.

When you acquire the Talent, the senses appropriate to the Zoan are identified.

They can include:

- smell;

- hearing;
- sight;
- echolocation;
- vibration perception;
- thermal perception;
- other sensory abilities belonging to the creature.

Through these senses you can locate hidden creatures within:

20 metres

even when you cannot see them directly, provided the chosen sense can actually detect them.

You can also follow days-old tracks when the sense used allows it.

The Talent does not automatically grant every sense on the list.

Only those consistent with the creature are used.

BEAST RUN

Passive · Beast Form

The Beast Form fully exploits its natural mode of locomotion.

When you acquire the Talent, associate the Zoan with a Movement Family.

FAMILY	EXAMPLES	INCREASE
Land sprinter	Felines, fast canids, equines, antelopes, ostriches, bipedal predators	+4 m on the ground
Heavy land creature	Bears, bovids, boars, rhinoceroses, elephants, large heavy dinosaurs	+2 m on the ground
Climber	Primates, caprines, geckos, arboreal animals	+2 m normally; +4 m while climbing or moving on appropriate surfaces
Flier	Birds, bats, winged insects, pterosaurs	+2 m on the ground; +4 m during flight
Burrower	Moles, badgers, burrowing insects and creatures	+2 m on the ground; +4 m while burrowing through appropriate terrain
Serpentine	Snakes and large crawling creatures	+3 m for movement compatible with this locomotion

The Family is recorded when the Talent is acquired.

It cannot be freely changed.

DIFFICULT TERRAIN

In Beast Form you ignore natural Difficult Terrain when your mode of locomotion suits that environment.

A climber can ignore many difficulties associated with walls and slopes.

A land sprinter can more easily cross rough open ground.

A flier can ignore many ground obstacles while in the air.

AQUATIC CREATURES

There is no aquatic Movement Family.

A Devil Fruit user always retains their weakness to the sea.

A Zoan based on an aquatic creature can possess its anatomy and characteristics, but immersion still causes the normal consequences of Devil Fruits.

SIZE

Passive · Beast Form

The Beast Form's mass and dimensions become a concrete advantage in combat.

Size is recorded in the Creature Sheet.

SIZE	APPROXIMATE DIMENSIONS	MELEE REACH
Small / Medium	up to about 2.5 m	1 m
Large	about 2.5–5 m	2 m
Huge	about 5–8 m	3 m
Gigantic	about 8–12 m	4 m
Colossal	over 12 m	5 m

Dimensions are game references.

The actual Beast Form determines the appropriate category.

REACH

Melee attacks made through the body or Natural Weapons use the Reach provided by Size when it exceeds the weapon's normal reach.

TRAMPLE

When you move through the space occupied by a creature smaller than you, you can trample it.

The target becomes:

Off-Balance.

The Talent does not normally allow creatures of the same or larger Size to be trampled.

TRANSPORT

A Zoan of Large Size or above can carry at least one normally sized character without reducing their Movement.

Even larger creatures can carry greater quantities according to the normal logic of their anatomy.

LIMIT

The Size Talent does not make a Zoan larger.

It turns the large dimensions the Beast Form already possesses into a mechanical advantage.

A naturally Small or Medium Zoan does not gain additional Reach merely by choosing this Talent.

GROWING FEROCITY

Passive

When your HP fall below half their maximum value, the creature's instincts become more aggressive.

You gain:

+1 Damage Die to melee attacks.

Once activated, Growing Ferocity remains active until the battle ends.

Subsequently being healed above half HP does not remove the benefit.

The Talent does not require a Bonus Action.

8.7 · D12 · MASTERY

BEAST RESILIENCE

Passive · Hybrid or Beast Form

The transformed body develops exceptional resilience to wounds.

1 time per round, when you take damage from an attack, you can reduce by:

1 Grade

all that attack's Damage Dice.

Progression:

d20	→	**d12**
d12	→	**d10**
d10	→	**d8**
d8	→	**d6**
d6	→	**d4**

d4 is the minimum.

Beast Resilience does not use the Reaction.

The Talent modifies only Damage Dice.

It does not automatically remove:

- Statuses;
- Displacement;
- secondary effects;
- conditions;
- fixed damage not expressed through Damage Dice.

ANCIENT HERITAGE

Passive

Requirement: Ancient Zoan

The character reaches sufficient mastery to exploit an exceptional characteristic of their ancient creature.

The Zoan was already Ancient from the Fruit's creation.

The Talent does not modify the Fruit's category.

Instead, it unlocks an advanced ability linked to the creature's ancient nature.

This might be:

- an exceptional bodily structure;
- a particular Natural Weapon;
- a unique physical form;
- an extraordinary biological ability;
- an exceptional size;
- another characteristic of the species.

The potential characteristic is recorded in the Creature Sheet from the Fruit's creation.

The Talent represents the moment when the character learns to exploit it fully.

MYTHICAL HERITAGE

Passive

Requirement: Mythical Zoan

The character reaches sufficient mastery to manifest one of their mythical creature's supernatural abilities.

The Zoan was already Mythical from the Fruit's creation.

The Talent does not modify the category.

It unlocks a supernatural ability not previously mastered.

This might be:

- an element;
- a supernatural phenomenon;
- a regenerative ability;
- a mystical manifestation;
- a property exclusive to the creature.

The ability must be consistent with the Heritage specified in the Creature Sheet.

HERITAGE TECHNIQUES

When Mythical or Ancient Heritage unlocks a new ability, it can become a valid narrative Source for creating new Fruit Techniques.

The Talent does not automatically grant the Builder's effects.

It grants the ability that allows them to be represented.

EXAMPLE · MYTHICAL DRAGON

The character possesses a Mythical Dragon Zoan from the start.

The Fruit's mythical nature is already recorded.

At d12 they acquire Mythical Heritage and unlock:

fire generation.

From then on, they can use fire as an ability of their Zoan and build Fruit Techniques consistent with that manifestation.

The character did not become a mythical dragon at d12.

They have finally learnt to master one of its superior characteristics.

SURVIVAL INSTINCT

1 time per combat
When you would drop to 0 HP

When an attack or another effect would bring you to 0 HP, animal instinct lets you keep fighting.

You remain conscious with:

1 HP

until the end of your next turn.

The HP gained is temporary and does not represent healing.

At the end of your next turn you drop to:

0 HP

unless, in the meantime, you have received enough actual healing to keep you above 0.

INSTINCTIVE TRANSFORMATION

Reaction
1 time per scene
0 ST

The body automatically reacts to imminent danger.

When you are about to be directly affected by:

- an attack;
- a hostile Technique;
- a dangerous effect;
- you can use your Reaction to transform immediately.

The transformation occurs before the effect is resolved.

You can use Instinctive Transformation even when you are:

- asleep;
- Stunned;
- unconscious.

TRANSFORMATION ECONOMY

Normal transformation

Main Action.
0 ST.

Three Forms

Bonus Action.
0 ST.
1 time per turn.

Instinctive Transformation

Reaction.
0 ST.
1 time per scene.

Instinctive Transformation only changes form.

It does not automatically activate other active Talents.

CALL OF THE BLOOD

Passive · Narrative

Animals of the same species as your Beast Form, or species sufficiently related to recognise you, perceive a familiar and dominant presence in the character.

Normally:

- they do not attack you first;
- they allow passage through their territory;
- they may tolerate your presence;
- with time and appropriate interaction they may come to follow you.

The Talent does not grant mind control.

Animals do not automatically become:

- servants;
- combatants;
- permanent companions;
- creatures willing to sacrifice themselves.

Risky requests or those contrary to their natural behaviour may require time, narrative conditions or appropriate checks.

8.8 · D20 · AWAKENING

AWAKENING · ZOAN

Ultimate

Requirements:

- Fruit Die d20;
- Ambition;
- the Game Master's permission.

The character reaches the:

ULTIMATE FORM

The Ultimate Form represents the creature's extreme manifestation.

The Zoan's body, instincts and fundamental characteristics reach a level impossible through normal transformation.

Awakening lasts:

1 scene.

AWAKENED REGENERATION

At the start of each of your turns you recover:

1d10 HP.

You cannot exceed your maximum HP.

AWAKENED NATURAL WEAPONS

Attacks made directly through the transformed body or Natural Weapons gain:

+2 Damage Dice.

The benefit can apply to:

- claws;
- fangs;
- horns;
- a tail;
- a beak;
- transformed fists or limbs;
- other Natural Weapons consistent with the Ultimate Form.

The bonus does not grant additional attacks.

ABSOLUTE INSTINCT

During the Ultimate Form you cannot be:

Stunned

0

Off-Balance.

DOMINANT CHARACTERISTIC

Every Zoan Awakening also takes one fundamental characteristic of the creature to its extreme.

This is defined using the normal Awakening Guidelines.

When appropriate, it can concern:

Movement

A creature built for speed or flight can attain exceptional movement abilities.

Defence

An armoured, resilient or particularly hard-to-defeat creature can develop superior defence.

Size

A naturally enormous creature can take its mass, reach and physical presence to an even greater extreme.

Senses

A creature specialising in perception can develop exceptional sensory abilities.

Body control

An extremely agile, flexible or adaptable creature can gain superior mastery of its own body.

Heritage

An Ancient or Mythical Zoan that has already unlocked its Heritage can take that ability to a higher manifestation.

The specific benefit is defined when Awakening is designed and remains fixed.

ZOAN AWAKENING IDENTITY

Zoan Awakening does not grant a universal increase to Strength or Movement.

Each creature instead develops what makes it truly exceptional.

A feline can achieve extreme speed.

An armoured creature can develop extraordinary defence.

A large herbivore can enormously increase its mass and trampling ability.

A bird can take its aerial mobility beyond normal limits.

A Mythical Zoan can take its supernatural Heritage to a new manifestation.

This way, two different Zoan produce truly different Awakenings.

THE PRICE OF AWAKENING

At the end of the scene:

the character's Stamina drops to 0.

The character cannot use Zoan transformations again until the next:

Long Rest.

Voluntarily ending Awakening before the scene ends does not avoid these consequences.
