CHAPTER 01

ENTERING PRESTIGE

Prestige marks a character's entry into the ranks of the greatest in their field. The experience accumulated during the voyage takes shape in abilities that make legendary feats possible. A blow can reshape the ground of a battlefield; in the hands of an exceptional swordsman, even an ordinary blade becomes a fearsome weapon. Aboard ship, the expertise of whoever holds the helm or tends the wounded can decide the fate of the entire crew.

This growth preserves the character's identity. Someone who built their style on physical power continues to express it through strength. Someone who relies on

movement, precision or specialist knowledge takes those qualities to ever greater heights. Prestige makes the path they have followed recognisable and lets them explore its possibilities to their peak.

Every Role can achieve this excellence through its own craft. A carpenter expresses it in the ship they build and keep afloat. An archaeologist demonstrates it by reading what others cannot interpret. For a captain, it can mean leading the crew at a moment when a well-given order changes the outcome of the battle. Prestige feats also belong to those who make the voyage possible.

1.1 GROWTH BEYOND D20

In die-based progressions, Prestige continues growth beyond d20. The die retains the d20 and gains an additional die, which increases through six stages: d20+d4, d20+d6, d20+d8, d20+d10, d20+d12 and d20+d20. The first five are called Prestige I, II, III, IV and V; the sixth is named Saikyō. The larger scales are reached gradually as you progress towards this peak.

This progression improves the relevant rolls and powers the effects that depend on the die reached. Where a rule uses the full roll, the additional die is also included. Where it specifies a distance, radius or another value linked to Prestige, use the scale of the ability concerned.

PASSIVE DEFENCE AND PRESTIGE

If the Racial Attribute enters Prestige, Passive Defence also continues to grow. PD uses the full Grade of the Racial Attribute: add together the maximum values of its component dice and add +1. No roll is made.

RACIAL ATTRIBUTE GRADE	PASSIVE DEFENCE
d20+d4 · Prestige I	25
d20+d6 · Prestige II	27
d20+d8 · Prestige III	29
d20+d10 · Prestige IV	31
d20+d12 · Prestige V	33
d20+d20 · Saikyō	41

Talents, Techniques, Haki, Unique Traits and other effects that explicitly modify Passive Defence apply after calculating the base value.

SAVES AND PRESTIGE

When a graded source that has reached Prestige imposes a Save, it does not roll its own pool. The Prestige Grade determines a fixed Threshold according to the following table. The target makes the Save with their full Attribute, including any Prestige die, and succeeds if the result meets or exceeds the Threshold.

SOURCE GRADE	PRESTIGE THRESHOLD
d20+d4 · Prestige I	13
d20+d6 · Prestige II	14
d20+d8 · Prestige III	15
d20+d10 · Prestige IV	16
d20+d12 · Prestige V	17
d20+d20 · Saikyō	21

The Status determines the Save Attribute; the source determines the Threshold. Specific rules with their own Threshold or a different procedure still take precedence.

When a Prestige Talent directly applies a Status and does not specify a different source, the Threshold comes from the current Grade of the Role Skill governing that Talent. This also applies to Statuses applied by evolutions, such as Unstoppable Maul and Seismic Wave. An effect included in a Technique instead uses the Technique's Grade, unless a specific rule says otherwise.

Each Attribute, Skill or Haki Colour retains its own progression. A character can excel in one area while still being a beginner in another. This combination defines their speciality.

1.2 ATTRIBUTES AND ROLE SKILLS

Attribute Prestige develops the qualities on which the character builds their feats. Strength can expand destruction and launches; Technique can support

superhuman movement and agility; Cunning can take control of shots to exceptional levels. Additional benefits follow Role compatibility and the conditions of the ability used.

This is why two characters with the same Attribute can express Prestige in different ways. A Striker's Strength manifests in impacts, while a Swordsman develops their ability to cleave through the Talents provided by their path. Technique mobility can belong to Striker and Swordsman; other Roles use the benefits compatible with their specialisation. The Attribute die nevertheless remains available for the normal rolls provided by the rules.

Role Skill Prestige instead grants access to the Talents that make the abilities of a profession extraordinary. You acquire one Talent at d20+d4, a second at d20+d8 and a third at d20+d12. The order is free, subject to prerequisites. At Saikyō, your acquired Talents improve.

The additional upgrades from Strength, Technique and Cunning do not consume these choices. Attribute and Skill can grow at different Grades: a high Attribute expands the possibilities that belong to it, while a high Skill opens choices from its catalogue. Sharing a Skill with another specialisation does not automatically grant its Talents.

SYNERGIES IN PRESTIGE

Synergies between Attributes and Skills continue to be checked beyond d20. A Synergy can use any Skill allowed by its requirement, even if it is not a Role Skill. Intermediate Prestige Grades do not grant new Unique Traits and do not consume Role Skill Prestige Talent choices.

The full Synergy rules and the ordinary Unique Trait catalogue are provided in §16.9 of the Game Manual.

1.3 SPIRIT AND HAKI

Spirit Prestige develops the character's determination and offers three upgrades shared by all Roles. Choices occur at d20+d4, d20+d8 and d20+d12. These abilities let you express your will through mental resistance, coordinated Colour activation and PIP recovery according to their respective rules.

Armament and Observation cannot exceed the Spirit die, including its Prestige. Spirit raises the attainable limit, while each Colour grows along its own path. Their Prestige upgrades existing active effects; ordinary passives retain their function. The pools retain their established maximums: 5 Armament PIP, 5 Observation PIP and 3 Conqueror's PIP.

The Sniper's Observation Role Skill and Observation Haki remain two separate progressions.

Conqueror's Haki follows a separate progression consisting of Prestige I, Prestige II and Saikyō. It has no die and requires no numerical Spirit thresholds. The GM assigns these stages in relation to the character's development in the campaign.

1.4 PRESTIGE FEATS AT THE TABLE

Prestige expands what a character can attempt and the effectiveness of acquired abilities. To use them, declare the intention and form of the intervention, then apply the relevant rules. Activations, reaches and use limits continue to guide choices during battle. Materials and preparation retain their importance in professional activities.

A large scale describes the possible scope of a feat. Actual destruction depends on the impact and the resilience of the environment; creatures are affected according to the attack or Talent used. Similarly, a legendary ship comes from work in a shipyard, and an extraordinary dish must actually be prepared. The ability to achieve exceptional results is expressed through specific actions.

Resources make these actions meaningful. Role Talents, Spirit upgrades and Haki effects share the normal availability of Bonus Actions. The player decides when to use their most powerful Talent, which abilities to accompany it with, and how many resources to keep for the next moment.

1.5 SAIKYŌ

Saikyō is the peak of a specific Prestige path. In die-based progressions it corresponds to d20+d20; for Conqueror's Haki it is the third stage assigned by the GM. A character

can reach it in their Role Skill while other areas continue to grow.

At this level, already acquired Talents and upgrades reach their final form. Saikyō does not grant a fourth Talent. Ultimates retain their own rules: the system introduces no dedicated Prestige evolutions.

PRESTIGE UNIQUE TRAITS

Synergies have no Trait progression at individual Prestige Grades. When both the Attribute and Skill of the same Synergy reach Saikyō, that pair can make a single Prestige Unique Trait available. This Trait is not a fourth Role Talent and follows its own catalogue. Until that catalogue is published, reaching Saikyō does not automatically grant a new effect.

The character continues to carry the choices that shaped them. Their abilities can now affect a battle, a crossing or the crew's survival with a force that once seemed unreachable. Prestige allows those feats to be played and to become part of the story of their own voyage.

CHAPTER 02

ATTRIBUTE PRESTIGE

Prestige develops the character through two separate progressions. Attribute Prestige upgrades the abilities of compatible Roles and determines scales for destruction, launching, mobility, cutting, range and trajectory control. Role Skill Prestige grants the choices used to acquire the Prestige Talents of your Role.

Attribute upgrades are gained on reaching the required threshold and do not consume Talent choices. Using them still requires a compatible ability, with its effects, slots, actions and costs. Skill Talents, however, are acquired individually: reaching a threshold does not grant the entire catalogue.

The two progressions can be at different Grades. A high Attribute expands physical possibilities without granting Skill Talents; a high Skill grants choices without automatically raising Attribute scales. In this text, the Technique Attribute means the character's characteristic; a Technique means a move built with its own effects and costs. ST means Stamina and SP means Structure Points.

2.1 ROLES AND ATTRIBUTE UPGRADES

ROLE	STRENGTH	TECHNIQUE	CUNNING
Striker	Environmental destruction and Colossal Launch	Lightning Displacement and Superhuman Agility	None in this module
Swordsman	Slash and cut scale using the blow's Attribute	Lightning Displacement, Superhuman Agility and slash and cut scale	None in this module
Crusher	Environmental destruction and Colossal Launch	No mobility upgrade in this module	None in this module
Sniper	None in this module	No mobility upgrade in this module	Superhuman Ballistic Calculation and Shot Geometry

For the Swordsman, slash and cut scales can only be used after acquiring the respective Talents Sovereign Slash and Colossal Cut. Technique mobility is instead an Attribute

upgrade available even without those Talents.

The exclusions in the matrix concern only the additional upgrades described here. All Roles continue to use the Prestige die for normal Attribute rolls: a Sniper with Strength d20+d8 rolls d20+d8 normally, even if they do not have the destruction wave or Colossal Launch.

The Crusher applies Strength benefits through attacks and Techniques compatible with their bludgeoning weapon. Striker Talents require the corresponding Role and their own prerequisites: using Athletics as a Role Skill does not grant them to the Crusher or Swordsman.

The Swordsman retains their own form of destruction through cleaving: Strength does not grant them the radial environmental wave or Colossal Launch of Striker and Crusher. Sniper, Crusher and the other Roles excluded from mobility retain their ordinary movement effects. Any independent abilities from Race, Fruit or Haki follow their own rules.

2.2 PART ONE: ATTRIBUTE PRESTIGE

2.3 STRENGTH PRESTIGE

For Striker and Crusher, Strength in Prestige makes the environmental destruction scale and Colossal Launch available. They are passive Attribute upgrades, with an additional cost of 0 ST and no Talent choice. Destruction concerns a Strength-based impact or an ability that expressly uses its scale, such as the Striker's Titanic Wave Talent and the Crusher's Seismic Wave. Colossal Launch requires an offensive melee Technique of your own Role containing the Builder's Launch effect. All costs of the Technique and effects used remain payable.

This only serves to distinguish it from the Striker's Launch Talent and other abilities that produce their own push.

STRENGTH PRESTIGE SCALES

STRENGTH PRESTIGE	STRENGTH DIE	MAXIMUM LAUNCH	MAXIMUM DESTRUCTION RADIUS
I	d20+d4	10 m	5 m
II	d20+d6	15 m	10 m
III	d20+d8	20 m	30 m
IV	d20+d10	30 m	100 m
V	d20+d12	50 m	300 m
Saikyō	d20+d20	100 m	1,000 m

These values are maximums. You may choose a shorter distance or a smaller radius. The destruction radius is measured from the impact point: a radius of 100 m corresponds to an area 200 m in diameter. At Saikyō, the radius of 1,000 m corresponds to a diameter of 2,000 m.

You do not roll Strength to determine how many metres you reach: use the row corresponding to its current die. The Strength roll is used when a rule requires a check or, in the case of Crash, to determine damage.

If Strength has not yet reached Prestige, the distances and sizes provided by ordinary effects remain in force. In particular, a Technique's Launch effect retains its 3 m.

ENVIRONMENTAL DESTRUCTION

The destruction scale expresses the maximum extent of the environmental consequences of a Strength blow: broken paving, gouged ground, torn-off doors, shattered cover and damaged parts of structures. The impact point is the centre of the area.

The radius indicates how far the devastation can extend. Actual destruction depends on the blow, material, resilience of the obstacle and damage dealt. A strong wall can remain standing even if it lies within the maximum area. The scale does not automatically destroy every object in the area.

For structures with Structure Points, abbreviated SP, subtract the damage actually suffered and apply the specified consequences when they give way. For elements without SP, the GM determines breakage and collapse consistent with the damage and material. When an impact propagates through the area, damage decreases with distance according to the following bands.

For Striker and Crusher the scale limits the consequences for the environment; the blow or effect used determines which targets receive numerical damage. Dealing the blow's damage to creatures in an area requires the Striker's Titanic Wave Talent, the Crusher's Seismic Wave or a Technique that provides for it. Prestige Strength alone does not assign damage to all creatures within the radius.

A Crash can also produce cracks, debris and breakage compatible with this scale. Its damage remains as established by Colossal Launch and is applied only to the recipients specified in the first collision rule.

ACTIVATION CONDITIONS FOR ENVIRONMENTAL DESTRUCTION

Type: passive Strength Attribute upgrade. Roles: Striker and Crusher. Requirement: Strength of at least d20+d4 and a compatible impact on the environment. Additional cost: 0 ST. Additional action: none.

You may use the scale when you land a Strength-based attack and the impact is actually delivered to the ground, an object or a structure. It can be a basic attack or an offensive Technique of your Role: a Striker can punch the ground; a Crusher can bring their hammer down on the floor or against a wall. For the Crusher, the attack must use a compatible bludgeoning weapon.

A blow against a creature can also affect the environment if the impact is transmitted to a surface or structure. Identify the contact that produces the devastation: hitting an opponent backed against a wall, delivering the blow into the ground beneath them, or making them collide with a surface through the specified effects. Simply hitting a creature does not automatically damage the entire surrounding environment.

The scale expresses the ability to extend an actual impact. A missed or avoided blow does not automatically produce an area of damage. If a collision with the environment nevertheless occurs during resolution, that collision must be recognised and resolved with its own damage; it is not assumed to have occurred merely because Strength is in Prestige.

Environmental destruction alone does not require acquiring a Skill Prestige Talent, and does not require Launch or Crash in the Technique. These effects become necessary when you want to hurl a creature and deal the collision damage described in the following sections. A normal Strength check to lift, drag or push an object does not automatically deal the damage of an attack.

ENVIRONMENTAL PROCEDURE

Before rolling, declare the point you want to hit and, if you want to propagate devastation, the chosen extent within your Strength's maximum radius. Resolve the attack with its normal reach, required actions and any Technique costs. An undefended surface requires no additional check to activate the upgrade; any rolls needed to reach or hit it follow the ordinary rules.

When the impact occurs, use the blow's damage as D and apply to the structures reached the band for their distance from the impact point. For a Crash, instead use only its Strength roll, respecting the limit on recipients of the first collision. Do not make an additional Strength roll to determine the radius or add environmental damage that is not provided for.

For structures with SP, subtract the actual damage after the relevant reductions. The Crusher's Demolisher and the Striker's Breaking Fists, if acquired, retain their benefits against compatible objects; attenuation bands continue to apply. For elements without SP the GM determines consequences consistent with the damage and material.

The impact must be able to reach the elements involved: an obstacle that withstands it can stop its propagation. The maximum radius does not guarantee that every structure in the area breaks. You may choose a smaller extent, and a particular ability can define the zone differently, such as the cone of Seismic Wave.

DAMAGE TO CREATURES AND TALENT ACTIVATION

Environmental destruction alone applies propagated damage to the environment. Creatures receive the attack's direct damage only if they are targets of the ability used. Collapses, falls and other hazards produced by the breaking environment can still injure them under the normal environmental rules; they are not an automatic copy of the punch or hammer damage.

A Striker with the Titanic Wave Talent may, after a successful blow of their own on their turn, spend the Bonus Action and 2 ST to also strike the other creatures in the chosen radial area. A Crusher with Seismic Wave may, after a Strength bludgeoning blow with valid contact on the environment on their turn, spend the Bonus Action and 3 ST to attack the creatures resting on the surface in the chosen cone. Both use the same Strength scale, with the limits and defences described in their respective Talents.

A Talent or Technique granting an area attack also determines which creatures you hit. The Strength scale does not automatically enlarge the area of any Technique: a move must expressly reference this scale to use it against creatures. Its actions, effects, slots and costs remain necessary.

Structures reached by the same impact receive the damage for their band only once. The passive scale and the Talent propagating that blow do not generate two copies of damage on the same object or creature.

Striker example: with Strength d20+d10 you strike the ground and deal 40 damage. The maximum radius is 100 m. Paving at 40 m may receive 20 environmental damage, according to its resilience and SP; a guard at that distance does not automatically receive that 20 damage. If, after the blow, you activate Titanic Wave by paying the Bonus Action and 2 ST, the guard reached by the wave may defend: if hit, they also receive the 20 damage specified by their band. The paving does not receive another 20 damage from the second description of the same impact.

AREA FORM AND IMPACT PROPAGATION

A Technique with the Area Form and the propagation of an impact are different mechanics. Swordsman and Crusher have only Close Area (d8, 2 ST), centred on the character with a radius equal to the weapon's effective Reach. Striker and Sniper have no ordinary Style Area Form.

Different areas require a special Source that expressly grants them. An Area Technique retains its own shape, effects, slots and costs.

The environmental destruction of Strength Prestige originates from a single identifiable physical impact on the ground, an object or a structure. An Area does not generate an impact point for every creature and does not multiply the destruction scale; resolve a single valid point. The scale retains its own radius and rules.

DAMAGE BY DISTANCE

This rule applies to damage propagated by the Striker's Titanic Wave Talent, the Crusher's Seismic Wave and environmental destruction in the area. Let D be the total damage of the blow generating the impact, before the initial target's reductions. It includes the Striker's Titan's Power, the Crusher's additional Strength roll from Unstoppable Maul and other bonuses applicable to the blow; it excludes any subsequent Crash. Let R be the maximum radius established by Strength Prestige.

Measure the distance of each creature or structure from the impact point and apply the corresponding band.

DISTANCE FROM THE IMPACT POINT	PROPAGATED DAMAGE
Up to one quarter of R, inclusive	D
Beyond one quarter and up to half of R, inclusive	Half of D
Beyond half and up to three quarters of R, inclusive	One quarter of D
Beyond three quarters and up to R, inclusive	One eighth of D

Round each fraction down, then apply the recipient's own reductions. A result of zero deals no damage. The target of the initial blow receives that blow only once and does not also receive a second copy of the propagated damage.

The thresholds depend on your Strength's maximum radius. If you choose a smaller area, you limit which targets are reached and retain the same damage thresholds. The blow does not propagate beyond the chosen radius.

STRENGTH DIE	D UP TO	HALF OF D UP TO	ONE QUARTER OF D UP TO	ONE EIGHTH OF D UP TO
d20+d4	1.25 m	2.5 m	3.75 m	5 m
d20+d6	2.5 m	5 m	7.5 m	10 m
d20+d8	7.5 m	15 m	22.5 m	30 m
d20+d10	25 m	50 m	75 m	100 m
d20+d12	75 m	150 m	225 m	300 m
d20+d20	250 m	500 m	750 m	1,000 m

The columns indicate the upper limit of each band; each subsequent band begins beyond the limit of the previous one. The damage scale does not by itself authorise an area attack against creatures: an ability that strikes them is always required.

Saikyō example: an impact dealing 40 damage propagates 40 damage within 250 m, 20 beyond 250 and up to 500 m, 10 beyond 500 and up to 750 m, and 5 beyond 750 and up to 1,000 m. With the destruction scale alone, these values concern the structures reached. Creatures receive them only if an ability directly strikes them, such as Titanic Wave or Seismic Wave, and they can apply their own defences. Each recipient then applies the relevant reductions. The most intense destruction remains concentrated near the impact point.

COLOSSAL LAUNCH

Type: passive Strength Prestige upgrade. Roles: Striker and Crusher. Additional cost: 0 ST. Use requirement: an offensive melee Technique of your Role with the Launch effect. For collision damage: the same Technique must also contain Crash.

When a compatible Technique hits and applies Launch, you may replace the 3 m specified by the ordinary effect with the maximum distance for your Strength Prestige. Declare the launch direction and chosen distance, up to the maximum allowed by the scale.

With Strength d20+d8 you can hurl the target up to 20 m; with Strength d20+d12, up to 50 m. You may choose a shorter launch. The target's mass and size must be compatible with what your Strength allows you to hurl: the scale in metres does not by itself grant the ability to lift any weight.

Launch distance is measured from the position of the target hit. It is the movement caused after the blow, not the attack's reach: you must first reach and hit the target with the Technique's normal reach.

This use modifies the Launch effect contained in the Technique and does not require the target to already be Restrained. The ordinary Talent called Launch, which throws an already restrained enemy up to 5 m, retains its conditions when used separately. Having it does not replace the effect that must be present in the Technique.

Colossal Launch does not grant a launch on any basic attack and does not add the required effects to the Technique for free. Launch occupies its own Effect slot and retains its ordinary cost of 1 ST. Crash, if present, occupies another slot and retains its ordinary cost of 2 ST. The Prestige upgrade has an additional cost of 0 ST, but does not make the Technique free, increase slots or remove other requirements.

Obstacles can interrupt the launch before the declared distance. If the first obstacle gives way, the trajectory can continue within the remaining distance; if it withstands the impact, the target stops against it. Any further collisions do not repeat this ability's additional damage.

CRASH WITH COLOSSAL LAUNCH

When the Technique contains both Launch and Crash, the hurled target's first collision with a creature or surface triggers Crash damage. Landing on the ground can

constitute this first collision.

Crash damage = one full Strength roll.

Roll the Strength die once, including the Prestige die, and add the results. With Strength d20+d8, Crash damage is therefore the result of d20+d8. This roll replaces the normal +1d8 from Crash: the two are not added together.

Apply the same result once to each of the following recipients:

- The hurled target, as additional damage on top of the Technique's initial damage.
- The first creature or structure actually struck, as impact damage.

The hurled target has already suffered the attack that launches them; at the first collision, apply the relevant reductions to Crash damage. A second creature involved can defend normally against the original Technique's attack roll result: if they avoid the collision, they receive no damage and do not count as the first actual collision. If hit, they receive only the Strength roll, with their own normal reductions.

An obstacle with SP loses Structure Points equal to the Crash damage actually received. The Technique's initial damage is not copied onto the obstacle or a second creature.

The Crash roll does not receive Titan's Power, the Technique's Damage Die or Haki damage bonuses again. Its formula remains a single full Strength roll. The launch length and number of objects along the trajectory do not add multipliers.

You may apply this Crash damage only once per use of the Technique, at the first actual collision. Passing through or meeting other obstacles does not generate new copies of the roll. Any other distinct environmental hazards remain governed by their own rules.

LAUNCH WITHOUT CRASH

A Technique with Launch but without Crash deals its own normal damage and can hurl the target to the distance allowed by Strength. Colossal Launch does not grant it additional collision damage, either against the target or against what they encounter.

COMPLETE COLLISION EXAMPLE

A Striker has Strength d20+d8 and uses a Technique with Launch and Crash. Their maximum launch is 20 m. The Technique hits and deals 30 initial damage, already including any bonuses to the blow.

The Striker chooses to hurl the enemy towards a wall 12 m from the target's starting position. The enemy strikes the wall. For Crash, the Striker rolls d20+d8 and gets a total of 18.

- The enemy receives 30 damage from the Technique and 18 from Crash, for a total of 48 before any reductions.
- The wall receives 18 structural damage. If it has 40 SP and no relevant reduction, it drops to 22 SP.

The wall withstands the impact, so the launch ends at 12 m. It does not receive the 30 initial damage, and the normal +1d8 from Crash is not added. If it instead gave way and the trajectory continued, Crash damage would still already have been applied once.

The same resolution applies to a Crusher using a compatible Technique with Launch and Crash. The upgraded launch depends on Strength, regardless of the Skill that unlocked any Role Talents.

2.4 TECHNIQUE PRESTIGE

For Striker and Swordsman, the Technique Attribute in Prestige automatically grants Lightning Displacement and the Superhuman Agility possibilities provided by its threshold. These upgrades do not occupy Talent choices and do not require the Role Skill to have already reached Prestige. Sniper and Crusher do not receive this mobility package.

For Striker and Swordsman, this module allows Dash and Leap in compatible Techniques of their Style, respecting Grade, Form, slots and costs. Sniper and Crusher do not receive this mobility package. The mobility value is always read from the character's Technique Attribute, even when

the blow uses a different permitted Attribute. Pursue is removed from the Builder and is not part of the Prestige scale.

TECHNIQUE PRESTIGE SCALE

TECHNIQUE ATTRIBUTE	MAXIMUM SPECIAL DISPLACEMENT PER TURN	MAXIMUM HEIGHT OF A LEAP
d20+d4	10 m	5 m
d20+d6	15 m	10 m
d20+d8	20 m	15 m
d20+d10	30 m	20 m
d20+d12	100 m	50 m
d20+d20 Saikyō	1,000 m	200 m

These values are maximums, and you may choose shorter distances. Read the row for the current Grade of the Technique Attribute, without rolling to determine metres. Attribute upgrades apply when you use the compatible effects in the Technique.

Lightning Displacement uses the scale exclusively with Dash. Superhuman Agility uses the scale with Leap. Both uses share a single special displacement budget: combining them or having several compatible Styles does not double the metres available.

The budget refreshes at the start of your turn and remains available until the start of the next. Uses outside your turn, when allowed by the rules of the ability used, consume the budget still available. Each movement subtracts the metres actually travelled; ascent and changes of direction are part of the path.

Leap height limits how far you can rise from the starting point of that individual jump. It grants no additional metres: a Leap rising 20 m consumes at least 20 m of the available budget.

Ordinary Movement remains separate and follows its own rules; it does not automatically multiply this scale's budget. If the Technique Attribute is not yet in Prestige, Dash and Leap retain their ordinary distances.

Growth at the first four thresholds remains modest. The jump in scale comes at d20+d12 and especially at Saikyō: the maximum movement of 1,000 m represents a manoeuvre by the greatest masters in their field.

LIGHTNING DISPLACEMENT

Type: passive Technique Prestige upgrade. Roles: Striker and Swordsman. Additional cost: 0 ST. Use requirement: a Technique of your Style compatible with Dash. Limit: the shared special displacement budget.

When you use Dash, you may replace the effect's ordinary distance with a distance within the scale's available budget. You may distribute the metres across several Techniques on the same turn, paying the costs of the move used each time.

Dash retains the option to move before or after the blow. Attacks require the normal rolls and normal reach after you have reached a suitable position.

During these movements you do not provoke Reactions caused by leaving an enemy's reach. Other Reactions follow their triggering events normally. The path must be physically traversable; Superhuman Agility expands the footholds you can use.

Dash occupies its own Effect slot and retains its ordinary cost of 1 ST. Leap occupies its own slot and retains its ordinary cost of 1 ST. Techniques respect Grade requirements and Form compatibility; the upgrade grants no free effects or slots.

Example: with Technique Attribute d20+d12 you have 100 m of special displacement available. You use Dash to travel 40 of them and reach an enemy, paying the Technique's cost. A later use can consume at most the remaining 60 m. Five Flurry attacks do not turn the budget into five movements of 100 m.

SUPERHUMAN AGILITY

Type: passive Technique Prestige upgrade. Roles: Striker and Swordsman. Additional cost: 0 ST. Requirement for upgraded leaps: a Technique of your Role compatible with Leap. Ordinary Leap cost: 1 ST and the corresponding Effect slot.

When you use Leap, you may replace the ordinary distance with a distance within the available budget, also respecting the maximum height of the individual jump. The Technique Attribute Grade also determines the following possibilities.

IMPOSSIBLE FOOTHOLDS

With Technique Attribute d20+d4 or higher you can travel along walls, ships' masts, ropes and fragile surfaces without interrupting movement because of the precarious foothold. The path must offer genuinely usable contact points, and you must end it on a support capable of holding you.

This ability applies to ordinary Movement and permitted special displacements. Each consumes metres from its own resource. Traversable walls and precarious supports do not impose a check merely because they are vertical or unstable; any additional threats and obstacles are resolved normally.

LEAPS IN THE AIR

From Technique Attribute d20+d8 you can push off the air with Leap. You can change direction while airborne or during a fall, reach a target above you or move towards a new foothold without first having to touch the ground.

Each use pays the Technique's cost and consumes the metres actually travelled. The height limit applies to each Leap; a sequence of leaps remains limited by the total budget.

If you end the manoeuvre without a foothold or an ability supporting you, you resume falling. Using the Technique follows the normal action economy: Leap can be used outside your turn only when an ability expressly permits it. This passive grants no additional Reactions.

AERIAL SUSPENSION

From Technique Attribute d20+d12, after an aerial Leap you can remain suspended until the start of your next turn. Upkeep until that point is included in the use of Leap; it requires no other Bonus Action or separate cost.

At the start of the next turn you can perform a new Technique with Leap before resolving the fall. The Technique requires its own normal action and cost; a new aerial Leap renews suspension. If you make no new manoeuvre and reach no foothold, you resume falling.

Example: you are already in the air and have Technique Attribute d20+d12. You push off with an aerial Leap and rise up to 50 m, using part of the 100 m of special displacement available. After the manoeuvre you remain suspended until the next turn. On the next turn the budget refreshes, and you can use a new Technique with Leap to continue combat in the air.

SAIKYŌ APPROACH EXAMPLE

A Swordsman has Technique Attribute d20+d20. They have 1,000 m of special displacement available and can use a Technique with Dash or Leap to reach a distant ship, provided the entire path fits within the budget and the trajectory is permitted. For an aerial crossing they use Leap and the possibilities of Superhuman Agility; Dash alone requires a physically traversable path.

If they travel 800 m, 200 m of special displacement remain until the budget refreshes. The blow is resolved only when the target is within the blade's normal reach. The Swordsman pays for the Technique, including 1 ST for Dash or 1 ST for Leap. If the move contains both effects, they pay for both, respecting normal construction limits. The movement does not grant an additional attack or an automatic hit.

2.5

STRENGTH AND TECHNIQUE SCALES FOR THE SWORDSMAN

Sovereign Slash and Colossal Cut use the scale of the Attribute specified by the blow, Strength or Technique. Their acquisition belongs to Athletics Role Skill Prestige, and their use requires the Talents described in part two. The scale does not by itself grant these abilities.

SLASH AND CUT SCALE

BLOW'S ATTRIBUTE	SOVEREIGN SLASH REACH	MAXIMUM COLOSSAL CUT SIZE
d20+d4	20 m	5 m
d20+d6	30 m	10 m
d20+d8	50 m	30 m
d20+d10	100 m	100 m
d20+d12	300 m	300 m
d20+d20 Saikyō	1,000 m	1,000 m

These values are maximums: you may choose shorter distances and smaller sizes. The metres depend on the Attribute's current die, without rolling to determine them. To use a column you must have the corresponding Talent.

Reach measures the distance between you and the point to be hit. Cut size measures the length of the section you want to sever in the chosen element. It is not a destruction radius and does not assign damage to every surrounding element. Colossal Cut requires reaching the chosen point with the blow's reach; Sovereign Slash allows you to hit it from a distance.

If the Attribute is not yet in Prestige, Sovereign Slash retains Air Slash's 10 m and still applies full damage. Colossal Cut retains its structural bonus, while the size of the cut follows the blow's ordinary limits.

2.6 CUNNING PRESTIGE

For the Sniper, the Cunning Attribute in Prestige automatically grants Superhuman Ballistic Calculation and the Shot Geometry scale. These upgrades do not occupy Talent choices and do not require Observation to have already reached Prestige. They apply through ranged or thrown weapons compatible with the Sniper Style. Striker, Swordsman, Crusher and other Roles do not receive this package in this module.

Cunning determines guaranteed range and the number of deviations available; the attack roll retains the Attribute specified by the weapon or Technique. The blow's Attribute remains the one recorded on its sheet and cannot be freely changed to use a higher die.

CUNNING PRESTIGE SCALE

CUNNING ATTRIBUTE	MINIMUM EFFECTIVE RANGE	DEVIATIONS WITH IMPOSSIBLE SHOT
d20+d4	100 m	1
d20+d6	150 m	1
d20+d8	200 m	2
d20+d10	300 m	2
d20+d12	1,000 m	3
d20+d20 Saikyō	5,000 m	5

Read the row for the current Grade of the Cunning Attribute, without rolling to determine metres or deviations. Growth remains modest at the first four thresholds; the larger increase comes at d20+d12 and especially at Saikyō. If Cunning is not yet in Prestige, the weapon's distances, ordinary Talents and the normal possibilities of Impossible Shot remain in force.

Minimum effective range is a range guaranteed by the upgrade, not a limit that reduces previous capabilities. If the weapon or Long Shot already allows you to hit further away, you retain that option. Deviations, however, are the maximum usable for the path of a single attack with Impossible Shot, and you may use fewer.

SUPERHUMAN BALLISTIC CALCULATION

Type: passive Cunning Prestige upgrade. Role: Sniper. Additional cost: 0 ST. Application: ranged or thrown weapons compatible with the Style.

You know how to compensate for distance, wind and target movement to take an accurate shot. Your weapon's effective range becomes at least the value on the Cunning

scale, retaining any greater ranges already possessed. Within this distance you deal normal damage, without penalties caused solely by distance.

The target must be located, or you must know their position accurately enough for the shot. The range scale does not automatically locate hidden creatures: to find them, use Observation, tools or other appropriate abilities normally. Obstacles, concealment, defences and conditions that physically prevent the attack continue to be resolved under their respective rules.

The upgrade concerns the weapon's effective range. A Technique retains the requirements and specific limits of its own Form and Effects. Ammunition, reloading, ordinary actions and costs remain necessary.

Example: with Cunning d20+d12, your compatible rifle can hit at least as far as 1,000 m. If you can locate a sentry at 800 m and the shot has a valid path, you make the normal attack and deal ordinary damage. If another ability already lets you shoot beyond 1,000 m, you retain that option.

SHOT GEOMETRY

Type: passive Cunning Prestige upgrade. Role: Sniper. Additional cost: 0 ST. Use requirement: having and using Impossible Shot, which retains its cost of 2 ST.

When you use Impossible Shot, you can construct a path containing up to the number of deviations indicated by your Cunning. Deviations can be ricochets off surfaces or changes of direction allowed by the path. The shot can also pass through openings and arrow slits: a straight passage without a change of direction does not add a deviation.

Each segment must offer a usable path for the projectile and a suitable surface when a ricochet is required. A deviation does not allow passage through a solid wall. The trajectory must be defined before rolling, and the total path must fit within the attack's permitted range.

Impossible Shot retains its own actions and cost of 2 ST, in addition to any Technique costs. Shot Geometry modifies the path of an attack and does not grant new targets. Hitting several enemies requires Ricochet, Chain or another appropriate ability, with its slots, costs and limits.

Saikyō example: you know the position of an opponent on a ship 4,000 m away. Using Impossible Shot, you can plan a shot that passes through an opening and uses up to five deviations off genuinely available surfaces, respecting your minimum effective range of 5,000 m in total. You pay 2 ST and resolve a normal attack against that target.

CHAPTER 03

FIGHTER TALENTS

3.1 PART TWO: ROLE SKILL PRESTIGE

3.2 ACQUIRING TALENTS

The Role Skill unlocks Prestige Talent choices. Each choice allows you to acquire an option from the catalogue compatible with your Role and path, respecting any prerequisites. Evolutions incorporate the previous version without adding copies of the same benefit.

ROLE SKILL DIE	ORDINARY ACQUISITION
d20+d4	First Prestige Talent choice
d20+d6	Die increase without a new choice
d20+d8	Second Prestige Talent choice
d20+d10	Die increase without a new choice
d20+d12	Third Prestige Talent choice
d20+d20 Saikyō	Skill rolls at Saikyō and application of the specific rules of acquired abilities

The number of choices available does not automatically grant all the Talents listed. Repeated copies of an already acquired Talent cannot be acquired. Automatic Attribute possibilities, including Colossal Launch, Lightning Displacement, Superhuman Agility, Superhuman Ballistic Calculation and Shot Geometry, do not occupy these choices.

ROLE AND PATH	ROLE SKILL	CATALOGUE TALENTS
Strength Striker	Athletics	Titan's Power, Titanic Wave, Endless Flurry
Technique Striker	Acrobatics	Absolute Precision, Endless Flurry
Swordsman	Athletics	Sovereign Slash, Colossal Cut, Impassable Guard, Absolute Blade Mastery
Crusher	Athletics	Unstoppable Maul, Seismic Wave, Shattered Guard, Colossus Stop
Sniper	Observation	Decisive Shot, Surgical Precision, Sovereign Interdiction, Bullet Dance

The Striker uses the Role Skill of their path. Athletics and Acrobatics are not added together to double their choices. Endless Flurry is shared by both paths and is acquired only once.

The Swordsman uses Athletics even when built on the Technique Attribute. Automatic mobility depends on Technique and does not require replacing Athletics with Acrobatics. Sovereign Slash requires Air Slash; Impassable Guard requires Perfect Parry.

The Sniper uses Observation as a Role Skill and acquires the Talents in their catalogue. Observation here means the Skill, separate from the Observation Haki Die. The Crusher uses Athletics and acquires the Talents in their own catalogue: sharing Athletics does not transfer the Talents of Striker or Swordsman to them.

3.3 STRIKER · SHARED PRESTIGE TALENTS

Athletics choices upgrade the damage of unarmed blows and allow their impact to propagate. Endless Flurry is described in the section shared by both paths.

TITAN'S POWER

Type: passive. Additional cost: 0 ST. Application: unarmed basic attacks and Striker offensive Techniques performed unarmed.

When a compatible attack of yours hits, roll your entire Strength die once and add the result to the blow's normal damage. If Strength has a Prestige die, roll both dice and add the results.

With Strength d20+d12, for example, the additional damage is d20+d12. This benefit applies to every successful blow, including additional attacks granted by Endless Flurry and compatible Reaction attacks.

The additional damage roll is separate from the attack roll. Titan's Power does not add the attack check result a second time and does not by itself change the blow's reach, number of targets or area. Normal damage reductions apply.

When another ability uses this blow's total damage, it also includes the contribution from Titan's Power. When an ability requires only a Strength roll, such as the Crash from Colossal Launch, do not add this Talent again.

Example: a Technique deals 12 damage before this Talent. With Strength d20+d8 you get 14 on the d20 and 5 on the d8: add 19, and total damage is 31 before any reductions.

TITANIC WAVE

Evolution of: Breaking Fists. Prerequisite: having Breaking Fists. Type: active. Activation: 1 Bonus Action after a successful blow. Additional cost: 2 ST. Limit: once on your turn. To enlarge the area: Strength must have reached Prestige.

When, on your turn, an unarmed attack or a Striker offensive melee Technique hits a creature, object or surface, you may spend the Bonus Action and 2 ST to

propagate the impact through the surrounding area. The maximum radius is that of your Strength Prestige; you may choose a smaller radius.

The Talent is the activation required to propagate the blow's damage against creatures as well. The environmental scale alone remains available without the Talent and does not consume the Bonus Action or the 2 ST. To use Titanic Wave you must have the Talent, have the Bonus Action and at least 2 ST available, and have landed the blow on your turn. An attack that misses or is negated by a defence does not satisfy the condition. This wave requires neither Launch nor Crash.

The area originates at the point hit. The shock wave strikes the other creatures reached by the impact, excluding whoever generated it. Any allies in the area must defend normally. The Talent does not allow you to freely exclude individual creatures from the chosen area.

Titanic Wave is an exception granted by the Prestige Talent, not an Area Form in the Striker Builder. The Striker has no ordinary Style Area Techniques. The wave always comes from the propagation of a single successful blow and follows only its own radius, conditions and costs.

Any Area granted by a special Source remains separate and does not multiply origin points or increase Titanic Wave's radius. Likewise, the wave does not enlarge or replace the Technique's shape.

Use the original attack roll result to resolve the impact against each additional creature, applying Passive Defence, Active Defences, Reactions and cover according to ordinary rules. If the blow against a surface required no roll, make a single normal attack roll valid for the area. Each creature can therefore suffer a different outcome.

Roll the initial blow's damage once, including Titan's Power and other applicable bonuses. Use that result as D and, for each additional target hit, apply the fraction specified by their distance from the impact point. The original target has already received the blow: they do not suffer a second copy of the same damage merely because they are in the area.

Propagated damage does not include any subsequent Crash, and secondary effects aimed only at the initial target do not automatically extend to everyone. Techniques and Haki retain their own requirements, costs and limits.

Breaking Fists is incorporated into the evolution: unarmed blows continue to deal full damage to compatible objects. Full damage removes the penalties provided for hitting those objects unarmed; attenuation by distance from the impact continues to apply. Structures reached by the wave receive damage for their own band and give way according to their resilience and SP. This benefit does not automatically ignore creatures' damage reductions.

Example: with Strength d20+d10 you can propagate a blow up to a 100 m radius. The initial blow deals 40 damage. A creature hit at 20 m receives 40 damage; at 40 m, 20; at 60 m, 10; at 90 m, 5, before their respective reductions. The initial target receives only one application of 40 damage.

3.4 STRIKER · PRECISION

The Striker has the same catalogue of four Prestige Talents whether choosing Athletics or Acrobatics: Titan's Power, Titanic Wave, Absolute Precision and Endless Flurry. Choices unlock through the chosen Role Skill at Prestige I, III and V. The Skill does not divide the Talents into separate paths and grants no additional choices; each Talent's requirements remain valid. Strength and Technique upgrades remain linked to their respective Attributes.

ABSOLUTE PRECISION

Type: passive. Talent's additional cost: 0 ST. Benefit: allows you to include Breaking Point in your own Striker offensive melee Techniques based on the Technique Attribute.

The Talent makes a precision effect available to choose when building the move. To apply it, the Technique must actually contain Breaking Point, have the necessary slot and pay its cost. Absolute Precision does not automatically apply to every basic attack.

BREAKING POINT

Family: Control. Cost: 2 ST. Slots: 1 Effect. Requirement: Absolute Precision and a Striker offensive melee Technique based on the Technique Attribute. Condition: a Clean Hit, with a margin of at least +4 according to ordinary rules.

Before the attack, declare the part or function you want to disable. The point must be accessible within the Technique's reach and consistent with the target's anatomy or the object's operation. Defences, cover and the conditions needed to hit that target continue to apply.

Pay the effect's cost together with the Technique's other costs, even if the attack misses or does not achieve a Clean Hit. If you obtain only a hit, deal normal damage without applying Breaking Point.

On a Clean Hit you deal the Technique's normal damage and may replace the Signature's Stun or Off-Balance effect with one of the following results.

- Hand: the struck hand cannot hold or use what it is carrying. The other hand and abilities that do not depend on the disabled hand remain available.
- Leg: the target cannot perform voluntary Movement until they recover the function. They can still attack or use abilities compatible with their position.
- Hold: you break a hold maintained with the struck part and free whoever or whatever that hold was restraining. The target can attempt a new hold under the ordinary rules.
- Component: you damage an accessible element, such as a weapon's trigger, the rudder, a joint or a cannon mechanism. Apply the Technique's damage to that component, assessing its own resilience and Structure Points where present; the result depends on sufficient damage being dealt to compromise its function.

The limitation on a hand or leg ends when the target spends a main Action to recover the function, or at the end of combat. It represents temporary disabling, not permanent mutilation. A broken hold is an immediate result; damage to a component instead follows the rules for objects and repairs.

You can keep only one physical function disabled per target with this effect. A new application to a different part replaces the previous one; repeating the blow to the same part does not add further limitations.

Breaking Point replaces only the Signature's Status for that blow and shares its limit of one activation per turn. Applying Breaking Point consumes the Signature's sole activation; if Breakthrough Strike has already activated that turn, you cannot apply the Signature again through Breaking Point. Any other Technique effects follow their own rules, respecting the ordinary limit on effects per family. The Talent does not allow you to automatically ignore a defence or hit a physically unreachable part.

Example: you declare that you want to disable the hand an enemy is using to hold a pistol. The Technique with Breaking Point costs 2 ST for this effect, in addition to its other costs. You get a Clean Hit: the enemy suffers the damage, and the hand cannot use the pistol. They can recover the function by spending their main Action, or continue the battle using their remaining available abilities.

3.5 STRIKER · FLURRY

ENDLESS FLURRY

Endless Flurry belongs to the Striker's shared catalogue. Acquiring it uses Athletics or Acrobatics, according to the chosen Role Skill, and one of the normal Prestige choices available.

Evolution of: Flurry · Mastery. Type: active. Activation: 1 Bonus Action after an unarmed attack. Limit: 1 activation on your turn. Progressive cost: 1 ST for the first extra attack, 2 ST for the second, 3 ST for the third, 4 ST for the fourth and so on, in addition to all the normal costs of any Technique.

After making an unarmed attack, you may activate Endless Flurry to perform a sequence of additional attacks on the same turn. The initial attack can be a basic attack or a Striker offensive melee Technique performed unarmed, and need not have hit.

Flurry's cost increases for each additional attack made during that activation: the first costs 1 ST, the second 2 ST, the third 3 ST, the fourth 4 ST, the fifth 5 ST and so on. There is no predetermined maximum number of extra attacks: the limit is the Stamina the character can and chooses to spend. Each additional attack can be an unarmed basic attack or a Striker offensive melee Technique. If you choose a Technique, you always pay both Flurry's progressive cost for that attack and all the normal costs of the Technique and its effects. Both costs are added in full.

Decide whether to continue after resolving each attack, and pay the next attack's cost before attempting it. A missed attack consumes the paid Stamina normally, but does not interrupt Endless Flurry.

You may focus the attacks on the same opponent or distribute them among reachable targets. Each attack retains its own reach, attack roll, damage and the target's normal defensive options. Endless Flurry grants no free Movement or special displacements. Any movements come from remaining available Movement or effects contained in the Technique used, and consume their costs and any budgets normally.

Additional attacks are not new main Actions and grant no further Bonus Actions. They cannot be used to activate other active Talents, activate Haki, perform Support or Enhancement Techniques or freely use a Special Move. Compatible passive Talents and upgrades can apply to individual blows according to their own rules, including Titan's Power and the Attribute upgrades Colossal Launch, Lightning Displacement and Superhuman Agility. Every Technique must contain the necessary effects and respect their requirements.

This evolution fully incorporates the Flurry chain. On the same turn you cannot add or reactivate Flurry · Basic, Improved or Mastery to gain further additional attacks. Breakthrough Strike remains subject to the general limit of only one activation per turn.

COST EXAMPLES

- 1st extra basic attack: Flurry 1 ST + Technique 0 ST = 1 ST.
- 2nd extra basic attack: Flurry 2 ST + Technique 0 ST = 2 ST.
- 3rd extra basic attack: Flurry 3 ST + Technique 0 ST = 3 ST.
- 4th extra basic attack: Flurry 4 ST + Technique 0 ST = 4 ST.
- 1st extra with a 2 ST Technique: Flurry 1 ST + Technique 2 ST = 3 ST.
- 2nd extra with a 2 ST Technique: Flurry 2 ST + Technique 2 ST = 4 ST.
- 3rd extra with a 2 ST Technique: Flurry 3 ST + Technique 2 ST = 5 ST.
- 1st extra with Dash: Flurry 1 ST + Dash 1 ST = 2 ST, in addition to any other Technique costs.
- 1st extra with Breaking Point: Flurry 1 ST + Breaking Point 2 ST = 3 ST, in addition to any other Technique costs.

Example with 8 ST available after the initial attack: you can make three extra basic attacks by paying 1 + 2 + 3 = 6 ST. The fourth would cost 4 ST and cannot be purchased with the remaining 2 ST. If you instead use a 2 ST Technique for the extra attacks, the first costs 3 ST in total and the second 4 ST, for a total of 7 ST. You have 1 ST left and cannot pay for the third, which would cost 5 ST in total.

Example with mobility and precision: the first extra attack with a Technique containing Dash costs at least 2 ST, comprising 1 for Flurry and 1 for Dash, and consumes only the metres actually travelled from the Technique budget. The first extra attack with Breaking Point costs at least 3 ST, comprising 1 for Flurry and 2 for the effect, and requires Absolute Precision. Other effects are paid for normally.

3.6

SWORDSMAN WITH ATHLETICS AS A ROLE SKILL

The four Talents are options to acquire through Athletics choices. Their physical scale depends on the Attribute specified by the blow; the roll added by Impassable Guard

instead depends on the Athletics Skill.

SOVEREIGN SLASH

Evolution of: Air Slash. Type: passive. Additional cost per use: 1 ST. Use requirement: a compatible Swordsman offensive melee Technique performed with a blade.

When you use the Technique, you may unleash a slash that reaches the target within the scale's reach. The cost of 1 ST is added to that of the Technique. It requires no separate Bonus Action.

Final damage remains full: Air Slash's halving is removed. The Talent replaces its ordinary version and does not require paying for it a second time.

Make the Technique's normal attack roll. The target uses their own defences and cover under the general rules. The slash travels through the space between you and the point hit; obstacles can intercept it and must be overcome or damaged under their own rules.

The Technique retains its own effects, slots and costs. A Single Technique continues to hit only one target. The Swordsman's Close Area retains minimum Grade d8 and cost 2 ST: it cannot be projected at a distance through Sovereign Slash, remains centred on the character, and its radius equals the blade's effective Reach. Ranged Area slashes require an ability that expressly grants them. Effects requiring physical contact retain that condition.

Example: you use a Technique based on the Technique Attribute d20+d10. You can reach an enemy up to 100 m away. The Technique costs 3 ST and its final damage is 28: with Sovereign Slash you pay 4 ST and, if you hit, deal 28 damage before the target's reductions.

COLOSSAL CUT

Type: active. Activation: 1 Bonus Action before the blow. Additional cost: 2 ST. Duration: the next attack with a blade on your turn. Benefit's target: a single element of the environment.

Choose what you want to sever: a hull, a pillar, a wall, a mass of rock or a section of a larger structure. The chosen section must fit within the maximum size granted by the blow's Attribute. The GM defines the element's SP and any resistances before the roll.

You must be able to hit a useful point on that element with the attack's normal reach. For a ranged cut you can use a Technique with Sovereign Slash, also paying its cost.

If the blow succeeds, damage against the chosen element is:

Structural damage = normal attack damage + one full roll of the Attribute used.

The additional roll is a damage roll separate from the attack roll. Roll it once, including the Prestige die, and add the results. With Strength d20+d8 you add d20+d8; with Technique Attribute d20+d12 you add d20+d12.

Apply the relevant resistances and subtract the damage received from the element's SP. If the damage reduces its SP to zero, you sever it with that single slash. If SP remain, the element is damaged. For elements without SP, the GM determines the result using the normal rules for objects and materials.

Each use concerns one element and applies the damage only once. The maximum size indicates how large the cut can be; it does not multiply damage. Against a creature, this Talent does not add the structural bonus. Consequences of failure, such as a collapsing wall or an opening hull, are resolved separately.

The Bonus Action and 2 ST are spent before the attack and remain consumed if you miss. The upgrade ends after that blow or at the end of your turn.

Example: you choose a pillar with 40 SP, with a section within your scale. The blow deals 25 damage and the full Attribute roll adds 18. Structural damage is 43: if the pillar has no relevant reductions, you sever it. A pillar with 60 SP would instead be left at 17 SP.

IMPASSABLE GUARD

Evolution of: Perfect Parry. Type: reactive. Additional cost: 2 ST and your Reaction. Use requirement: a Parry with a blade against an interceptable attack.

When you attempt the Parry, you may spend 2 ST to add a full Athletics roll to the normal defensive roll. With Athletics in Prestige, roll both dice and add the results.

Impassable Guard roll = Parry Attribute + Weapon Die + full Athletics roll.

Compare the roll with the attack's result according to the general Parry rules. You can intercept a single attack that can physically be opposed with the blade, including large or area attacks. Defence compatibility and conditions required by the powers involved continue to apply.

A successful Parry protects you and allies within 5 m behind your position relative to the direction the blow comes from, provided your interception actually covers its trajectory towards them. A single roll resolves the defence against that attack.

You can therefore intercept a cannon shot before it reaches the crew or stop the front of a large slash. Separate attacks require separate defences and available Reactions. If the Parry fails, the blow is resolved normally against its targets.

You retain Perfect Parry's retry: once per combat, after a failed Parry you may repeat the roll and must accept the second result. The retry repeats the full Impassable Guard roll, without spending its 2 ST again or using another Reaction.

The 2 ST are added to any costs of the defensive ability used. Impassable Guard uses the ordinary Reaction and does not require the Bonus Action. The Talent upgrades Parry and does not grant an attack in response.

Example: a cannon shot is resolved with an attack roll result of 38. Your normal Parry produces 24; the full Athletics roll produces 19. The total is 43: the Parry succeeds and also protects companions in the covered position behind you.

ABSOLUTE BLADE MASTERY

Type: passive. Additional cost: 0 ST. Application: any compatible blade you wield.

Any blade you wield uses d20 as its Weapon Die, regardless of its original Grade.

- Basic attack: Attribute specified by the blade + d20.
- Basic attack damage: 1d20, plus compatible benefits.
- Parry: Attribute specified by the defence + d20.

A d4 knife, a d8 sabre and a d12 katana therefore use d20 for these rolls in your hands. The Talent always uses d20: Athletics Prestige unlocks its acquisition and does not add another die to the Weapon Die.

The blade retains its reach, properties and any special effects. The requirements for wielding it depend on its original Grade. The mastery belongs to the Swordsman: when another character wields that weapon, they use its normal Grade.

Swordsman Techniques continue to use their own Technique Die to hit and their own Damage Die. A d8 Technique remains d8 even when performed with a blade you use as d20. The Double Slash Signature follows the blow's Damage Die: on a basic attack with Mastery it adds d20; on a Technique it adds the Damage Die specified by that move.

Absolute Blade Mastery can accompany Impassable Guard: use d20 as the Weapon Die in its formula and add the full Athletics roll only once.

Example: you wield a d4 knife associated with the Technique Attribute. With Technique Attribute d20+d8, the basic attack uses d20+d8+d20. If you hit, basic damage is 1d20. On a Clean Hit, the Signature adds another d20, for a total of 2d20 before other applicable benefits.

3.7

CRUSHER WITH ATHLETICS AS A ROLE SKILL

A Crusher built on Strength uses Attribute Prestige for environmental destruction and Colossal Launch. Athletics instead grants the choices to acquire the following four Talents. The three ordinary acquisitions at d20+d4, d20+d8 and d20+d12 allow you to choose three options from the catalogue, respecting their prerequisites; they do not grant all four Talents.

The Talents require bludgeoning weapons compatible with the Role and the Arsenal rules. The attack roll retains the Attribute specified by the weapon or Technique, without freely changing it. Strength determines the scale when referenced and its own roll when an ability requires it; Athletics unlocks choices and provides the additional roll specified by Colossus Stop. Growth in one progression does not automatically increase the other.

The Crusher's ordinary Signature is called Devastating Impact: on a Clean Hit it pushes the target 3 m, with no additional ST. It is separate from the Striker's Titanic Wave Prestige Talent. The Crusher's Signature does not grant an offensive area wave and does not replace the Launch effect required for Colossal Launch. The Crusher does not receive the Technique Prestige mobility package.

UNSTOPPABLE MAUL

Evolution of: Heavy Strike Mastery. Prerequisite: having Heavy Strike Mastery. Type: active, blow modifier. Activation: declaration before the attack, without an additional Bonus Action. Cost: 3 ST in total instead of Mastery's 2 ST. Limit: once on your turn.

You may accompany a Crusher basic attack or offensive melee Technique performed with a compatible bludgeoning weapon. Pay the 3 ST on declaration, in addition to any Technique costs. This version replaces Heavy Strike Mastery and retains Advantage on the attack roll, +2 Damage Dice and the target becoming Off-Balance if the blow hits.

Your PD decreases by 5 from declaration until the start of your next turn. The penalty and cost remain even if the blow misses, is dodged or is parried. The Basic, Improved, Mastery and Unstoppable Maul versions do not stack to repeat bonuses or penalties.

In addition, separately roll Strength once, including any Prestige die, and add the result to the blow's damage. The additional roll concerns only this attack and does not modify the attack roll.

Unstoppable Maul damage = Heavy Strike Mastery damage + one full Strength roll.

If the attack exceeds the defence required to hit but the target stops it with a successful Parry, they still suffer half of the total damage, rounded down, then apply their own reductions. The Parry holds back the weapon but transmits part of the impact.

Residual damage from a parried blow does not apply Off-Balance, the Signature, Launch, Crash or other blow effects. It does not count as a successful blow to activate Seismic Wave, Shattered Guard or Guard Breaker. Other defences retain their own rules: a successful Dodge avoids the attack, and a roll that does not exceed the defence required to hit deals no damage, even halved.

If the blow instead hits normally, full damage and compatible effects apply. For a subsequent valid propagation with Seismic Wave, D also includes this additional Strength roll. Any Crash uses its own separate Strength roll and does not receive Unstoppable Maul's bonus again.

Example: Mastery damage is 30 and the additional Strength roll gives 18. Damage becomes 48 before reductions. If the blow hits, the target receives 48 damage and becomes Off-Balance; if they parry it successfully after the attack has exceeded the required defence, they receive 24 damage before reductions, and other effects are stopped. In both cases the Crusher has spent 3 ST and retains PD –5 for the specified duration.

SEISMIC WAVE

Evolution of: Chain Impact. Prerequisite: having Chain Impact. Type: active. Activation: 1 Bonus Action after a successful blow on your turn. Cost: 3 ST in total instead of Shock Wave's 2 ST. Limit: once on your turn. For this wave: Strength of at least d20+d4 and a valid impact on a surface.

When a Strength-based bludgeoning attack of yours hits the ground, an object, a structure or a creature and the impact is transmitted to a surface, you may spend the Bonus Action and 3 ST to also attack creatures resting on that surface. It can be a basic attack or a compatible offensive Technique. A blow that misses, is dodged or is parried does not allow activation.

The destruction scale alone already allows you to damage the environment without these costs. Seismic Wave adds direct damage, push and Off-Balance against creatures: it uses Strength's existing radius and does not create a second destruction scale.

The wave starts at the impact point and travels in a 90° cone. When you activate it, declare the direction and chosen length, up to your Strength's maximum radius. For example, with Strength d20+d10 the cone can extend up to 100 m; at Saikyō, up to 1,000 m. Damage bands remain calculated on Strength's maximum radius, even if you choose a shorter cone.

Seismic Wave always originates from a single valid impact and follows its own Prestige shape. The Crusher's Close Area, if present in the Technique, retains minimum Grade d8 and cost 2 ST, remains centred on the character and has a radius equal to the weapon's effective Reach: it does not generate several cones, create new centres for Seismic Wave or increase its radius.

The single point where the bludgeoning impact is delivered to the surface must be identifiable: the entire wave is resolved from that point. A larger Area granted by a special Source remains separate; Area and Prestige cone do not increase one another's dimensions.

Only creatures resting on the ground or the physically connected surface reached by the wave are involved. Being above the cone while flying or suspended without contact is not enough. An obstacle that withstands the impact can stop propagation, and a separate surface is not automatically reached. The Crusher generating the wave is excluded; allies in the zone can be hit and cannot be freely excluded.

Use the original attack roll result against each additional creature, resolving PD, Active Defences, Reactions and cover according to normal rules. If the blow against a surface required no roll, make a single normal attack roll valid for the wave. Each creature can suffer a different outcome.

Roll the initial damage once and use it as D, including Unstoppable Maul and other bonuses applicable to the blow, but excluding any subsequent Crash. Each additional creature hit receives the fraction specified by distance, then applies their own reductions; they are also pushed 3 m away from the impact and made Off-Balance, unless relevant protections apply. An existing Status does not stack with a second copy of the same Status.

The initial target has already received the blow and does not receive a second copy of damage, push or Off-Balance from this wave. Other Technique effects and the Signature do not extend to additional targets. Structures reached receive only one application of their band's damage: the passive scale and the Talent describe the same impact.

The cone replaces Chain Impact's limit of three additional enemies within 3 m. You do not also pay the previous version's 2 ST and do not add a second wave through Shock Wave. Seismic Wave makes Chain Impact unavailable as a separate choice; its benefits are incorporated into the evolution.

The wave's push remains 3 m: it does not become a 100 m launch and does not automatically generate Crash. Colossal Launch and its collision damage concern the target of the Technique actually containing Launch and, for damage, Crash.

Example: with Strength d20+d10 you hit the ground and initial damage is 40. Without the Talent you can damage the environment within the chosen radius, up to 100 m. If you activate Seismic Wave by paying the Bonus Action and 3 ST, a creature hit at 20 m in the cone receives 40 damage; at 40 m, 20; at 60 m, 10; at 90 m, 5, before reductions. Hit creatures are also pushed 3 m and made Off-Balance if they lack relevant protections.

SHATTERED GUARD

Evolution of: Guard Breaker. Prerequisite: having Guard Breaker. Type: passive. Additional cost: 0 ST. Additional action: none. Limit: 1 application on your turn.

When a direct attack of yours with a compatible bludgeoning weapon achieves a Clean Hit against a creature, with the normal margin of at least +4, you can open their guard completely. The target suffers the blow's normal damage.

Until the end of their next turn, they cannot Parry or use Active Defences based on physically blocking the blow. They can still dodge, move away and use defences that avoid the attack; they retain their PD and damage reductions. A defensive Technique can be used only if the way it avoids the attack is compatible with this limitation.

The effect represents the weapon being knocked aside and the defensive stance being compromised. It does not automatically destroy the weapon or shield and does not deactivate Haki, a Fruit or the target's reductions. Any damage to an object must be produced and resolved under the appropriate rules.

If the chosen blow hits without being Clean, instead apply normal Guard Breaker: the target's next Parry or Active Defence, before the end of their next turn, is made with Disadvantage. Both versions share this use and do not produce two penalties through the same blow. A new application does not stack further prohibitions or simultaneous durations.

An attack that misses, is avoided or is parried does not activate the Talent. Residual damage from Unstoppable Maul after a successful Parry does not open the guard. Seismic Wave does not distribute Shattered Guard to all creatures reached: the effect concerns the direct target of the chosen blow.

Example: on your turn you hit an enemy fighting with a shield with a Clean margin. Until the end of their next turn, they cannot stop blows with the shield or a Parry, but can dodge and retain their other compatible defences. The shield remains intact until it suffers sufficient structural damage to break it.

COLOSSUS STOP

Evolution of: Interception Blow. Prerequisites: having Interception Blow and Absolute Centre of Gravity. Type: reactive. Activation: 1 Reaction when an enemy enters your weapon's reach during movement. Cost: 3 ST. Limit: once per turn, using the available Reaction.

You may use the Talent only while satisfying all the conditions of Absolute Centre of Gravity: you are conscious, in contact with the ground, and not moving voluntarily. You must wield a compatible bludgeoning weapon and be able to reach the enemy as they enter its normal reach. The destruction scale does not extend interception reach.

Before the enemy continues moving beyond that point, spend the Reaction and 3 ST and make a bludgeoning basic attack. Add a full Athletics roll, including any Prestige die, to the normal attack roll. Athletics is added to the attack roll, not to damage.

Colossus Stop roll = normal basic attack roll + one full Athletics roll.

The enemy has their normal defences available. If the blow hits and deals actual damage, their movement ends immediately and cannot resume for the rest of that turn. A larger size does not negate this consequence: even an enormous creature can be stopped if the attack hits and damages them.

In this way you can interrupt a charge, dash or leap when the enemy actually passes through the weapon's reach. If you interrupt a leap, falls and the need for a foothold are resolved normally. Movement that does not pass through a position reachable by the weapon does not trigger interception.

The target retains their remaining actions and can use them from the position where they were stopped. The effect stops movement and does not automatically apply Stun or cancel all their actions. A subsequent push or other forced displacement follows its own rules.

If you miss, the enemy avoids the blow or their reductions bring actual damage to zero, movement is not stopped. The 3 ST and Reaction remain spent. The Talent uses the same interception as the previous version, without adding a second attack or a second Reaction. Colossus Stop makes Interception Blow unavailable as a separate choice.

The attack retains normal basic damage and effects compatible with the Role's basic attack. It does not become a Technique or acquire Launch or Crash for free. Unstoppable Maul requires use on your turn; Seismic Wave

also requires your Bonus Action and its own conditions. These Talents are not automatically added to an interception on other turns.

Example: you remain planted on the ground and a giant enters your club's reach during a charge. You spend 3 ST and the Reaction, add Athletics to the normal basic attack, and hit. If the giant suffers damage after reductions, they stop at that point and cannot continue moving that turn, but can still perform actions possible from that position.

3.8

SNIPER WITH OBSERVATION AS A ROLE SKILL

The four Talents are options to acquire through the three choices available at Observation d20+d4, d20+d8 and d20+d12. They are not all granted automatically. Sniper Talents require ranged attacks performed with weapons compatible with the Style and do not transfer to melee blows.

Cunning and Observation remain independent: Cunning determines range and deviation scales and its own rolls when required; Observation unlocks choices. Having a Talent does not automatically bring Cunning into Prestige, and reaching Cunning Prestige does not grant Talents.

DECISIVE SHOT

Evolution of: Held Breath. Prerequisite: having Held Breath. Type: active. Activation: 1 Bonus Action before the shot. Additional cost: 2 ST. Limit: once on your turn.

You prepare the next ranged attack against a single target, to be made by the end of your turn. It can be a basic attack or a compatible offensive Technique. If the blow hits, add a full Cunning roll, including the Prestige die, to damage, and the blow is considered Clean for the Signature and other compatible effects requiring that result.

Decisive Shot damage = ordinary blow damage + one full Cunning roll.

The target retains their defences. Clean Hit qualification applies only after a successful attack: it does not change the attack roll or turn a missed attack into a success. Total damage undergoes the target's normal reductions.

The benefit is consumed by the next valid attack, even if it misses; if you do not make it by the end of the turn, the benefit ends. The 2 ST are spent on activation and are added to any Technique costs. The Talent concerns a single blow against a single target and is not distributed through area attacks, Ricochet or Chain.

The evolution uses this activation and replaces Held Breath's limit with one use on your turn. Both versions do not stack to multiply the benefit. The additional Cunning roll applies only once.

Example: with Cunning d20+d8, a blow normally deals 12 damage. You roll Cunning separately and get 19: damage becomes 31 before reductions. Since the blow succeeded, it is also considered Clean and can activate Exposed Point or Hawk's Eye, if acquired.

SURGICAL PRECISION

Evolution of: Targeted Shot. Prerequisite: having Targeted Shot. Type: modifier to a ranged attack against a single target. Activation: declaration before the shot, without a Bonus Action. Additional cost: 2 ST.

You choose a precise point and declare the consequence you want to produce. Make the normal attack against the target's defences. If you get a Clean Hit, deal ordinary damage and also apply the targeted consequence, instead of giving up damage as with Targeted Shot.

- Hand: the target cannot use that hand until the end of their next turn.
- Leg: the target cannot perform voluntary Movement until the end of their next turn.
- Object or component: focus the damage on the chosen element; if it reaches 0 SP, you break it or interrupt its operation.

The chosen point must be reachable by the trajectory. A hand or leg is temporarily disabled: this effect does not automatically cause mutilation. Only one limb disabling can be active on the same target; a new application replaces the previous one.

If you hit without getting a Clean Hit, deal only ordinary damage. If you miss, deal no damage and apply no consequence. The 2 ST are paid even if the shot misses or fails to meet the requirement. The costs of the attack or Technique used remain.

When you hit an object, damage applies to the component actually chosen, with its own SP and resilience. You do not also deal the same damage to the creature holding it or to the entire structure. The evolution's effect does not stack with a second free consequence from Targeted Shot on the same roll.

Example: an officer is about to use a cannon. You strike their hand with a Clean Hit: deal normal damage to the officer and prevent them from using that hand until the end of their next turn. If you instead choose the cannon's mechanism, damage applies to that component and stops it only if it brings it to 0 SP.

SOVEREIGN INTERDICTION

Evolution of: Anticipated Shot. Prerequisite: having Anticipated Shot. Type: reactive. Activation: 1 Reaction when an observed enemy declares an Action, before they complete it. Additional cost: 2 ST.

You attack the enemy before they complete the declared Action, with a valid ranged attack and respecting range, path and weapon availability. If the shot hits, deal normal damage, and the opponent's Action occurs with Disadvantage, as with Anticipated Shot.

If you get a Clean Hit, you may instead prevent that Action, provided the shot concretely interrupts what is needed to perform it. You can hit the hand before a shot, break the control before activation or interrupt the gesture needed for a Technique. The point and how the blow obstructs the manoeuvre must be declared before the shot. If interruption requires breaking a component, its SP and resilience apply.

The opponent consumes the declared Action and retains the turn's other resources and possibilities. Resources already spent on that Action remain spent. A Clean Hit that cannot physically interrupt the manoeuvre applies normal Disadvantage without cancelling it.

The Talent concerns a manoeuvre not yet completed: a projectile already fired follows its own resolution normally. A missed attack neither penalises nor interrupts the enemy's Action. The Reaction and 2 ST are spent anyway; any Technique also pays its own costs.

The evolution uses the same Reaction as the anticipated shot and grants no second Reaction or other attack through Anticipated Shot. You may apply it only if the required Reaction is available.

Example: you observe an enemy shooter declaring a shot at an ally. You spend the Reaction and 2 ST and attack the hand holding the weapon. If you hit without a Clean Hit, their shot is made with Disadvantage; if you get a Clean Hit and the manoeuvre can be interrupted in this way, the enemy consumes the Action without completing the shot.

BULLET DANCE

Type: passive modifier of Sniper Techniques with Ricochet or Chain. Additional cost: 1 ST per use, in addition to Technique costs. Activation: no additional Bonus Action. Use requirement: a compatible Technique containing one of these two effects, with the corresponding slot.

When you use a Sniper Technique with Ricochet or Chain, every target reached receives the move's full damage, replacing the progressive reduction specified by the effect.

- Ricochet: up to two targets, respecting the ordinary limit of 5 m between the first and second.
- Chain: up to three targets arranged in a line, respecting the effect's other requirements.

Make a separate attack roll against each target and roll damage once. Each target applies defences and reductions normally. A missed target receives no damage, and no target can be hit twice by the same sequence.

The Talent modifies the damage of effects already present in the Technique; it grants no new slots or larger number of targets. Ricochet and Chain remain alternatives from the same family and are not added together to increase the number of blows.

If the path requires unusual trajectories, also use Impossible Shot, paying its 2 ST and respecting the number of deviations allowed by Cunning. Shot Geometry can modify the path, but does not remove the distances and arrangement required by Ricochet or Chain.

Example: a Technique with Chain hits three enemies in a line and the rolled damage is 18. With Bullet Dance, every enemy hit receives 18 damage before their own reductions, instead of 18, 9 and 4. If the Technique's only ordinary cost is Chain at 2 ST, use costs 3 ST in total: 2 for Chain and 1 for the Talent.

CHAPTER 04

COMBINATIONS AND RESOLUTION AT THE TABLE

4.1 COMBINED USE AND TABLE REFERENCE

4.2 ATTRIBUTES AND SKILLS AT DIFFERENT GRADES

A Swordsman has Athletics d20+d8, Strength d20+d10 and Technique Attribute d20+d4. Athletics grants them two Talent choices. For a Strength-based blow, if they have Sovereign Slash they can reach 100 m, and if they have Colossal Cut they can attempt a cut up to 100 m. Their Technique mobility remains 10 m of special displacement and a maximum height of 5 m per Leap.

If Technique reaches d20+d12, mobility rises to 100 m of special displacement and 50 m height per Leap without consuming a new Athletics choice. For a blow still based on Strength d20+d10, slash and cut scales instead remain at 100 m. The blow's Attribute remains the one established by the weapon or Technique sheet; it cannot be freely changed to use a higher scale.

A Sniper has Cunning d20+d12 and Observation d20+d8: Cunning grants them a minimum effective range of 1,000 m and up to three deviations with Impossible Shot; Observation grants them two Talent choices. If Cunning reaches Saikyō, range and deviations rise to 5,000 m and five without a new Observation choice. If only Observation grows, the available choices increase at the specified thresholds, as do its rolls, while Cunning scales stay the same.

4.3 STRIKER COMBINATIONS

Titan's Power can apply to a Technique with Colossal Launch if both sets of requirements are met. Initial damage includes Titan's Power's additional roll. At the first collision, when Crash is present, make a different Strength roll for the collision, without adding the Talent or Technique damage again.

Titanic Wave and Endless Flurry both require the turn's sole Bonus Action and cannot be activated together on the same turn. Haki must already be active to accompany them when its activation requires the Bonus Action.

Endless Flurry can grant several Striker offensive Techniques on the same turn. For each additional Technique, pay both Flurry's progressive cost for that attack and all normal costs of the Technique and its effects. Every Technique retains its own requirements, collision limit and any shared movement budgets. The limit of one collision applies to each use of the Technique; the mobility budget applies to the entire interval between the start of the turn and the start of the next turn.

STRIKER AREA TECHNIQUES

The Striker has no ordinary Area Form in their Style catalogue. Titanic Wave is an independent Prestige ability propagating a single blow and does not require an Area Technique. If a special Source grants the Striker an Area, it follows its own profile and remains separate from Titanic Wave.

4.4 SWORDSMAN COMBINATIONS

Sovereign Slash and Colossal Cut can accompany the same Technique. Before the blow, spend the Bonus Action and 2 ST for Colossal Cut; when performing the Technique, add 1 ST for Sovereign Slash. Retain the move's ordinary costs. Reach and cut size are read from the same row of the Attribute used.

Example: with Technique Attribute d20+d12, you can hit a section of a ship's hull up to 300 m away and attempt a cut up to 300 m. If the Technique costs 2 ST, combined use costs 5 ST: 2 for the Technique, 1 for Sovereign Slash and 2 for Colossal Cut. Resolve the blow and apply a single structural damage result to the chosen element.

Impassable Guard uses the Reaction, so it can also be used after spending the Bonus Action on your turn, if the Reaction is available and you have the necessary Stamina. Absolute Blade Mastery applies to the rolls specified in its description without a separate activation.

Haki and other abilities retain their own conditions, resources and costs. Colossal Cut requires the Bonus Action: on the same turn you cannot also use it to activate Haki. An already active Colour can accompany compatible blows under its own rules.

A Technique with Dash or Leap can accompany compatible Swordsman Talents and uses the Technique Attribute budget. For example, a move including Leap at 1 ST and used with Sovereign Slash costs at least 2 ST before other effects; adding Colossal Cut also requires the Bonus Action and another 2 ST. Displacement and slash reach remain two separate measurements.

4.5 CRUSHER COMBINATIONS

Unstoppable Maul and Seismic Wave can accompany the same valid blow. Before the attack, declare Maul and pay 3 ST; after a successful blow with valid contact on the environment, you may spend the Bonus Action and another 3 ST for Seismic Wave. The total is 6 ST, in addition to any Technique costs. The wave's damage D includes Mastery's +2 Damage Dice and Maul's additional Strength roll.

If the opponent successfully parries Maul, they receive only the residual damage specified by the Talent. That result does not allow Seismic Wave activation and does not apply Shattered Guard. If the blow instead hits and is Clean, you may apply Shattered Guard to the direct target and then propagate the wave; the guard limitation remains only on that target.

A compatible Crusher Technique with Launch and Crash can accompany Maul. Initial damage includes Maul's bonus; Crash is a separate full Strength roll, applied only to the recipients of the first collision. You do not copy all initial damage onto the obstacle or add a second Maul bonus to the collision.

For Seismic Wave, the centre and positions involved are those at the moment of the initial impact. If the blow also produces a launch, the wave retains that centre; any subsequent Crash does not become a second centre of the same wave and does not increase D. Contact with a surface allowing propagation is still required.

A Crusher Technique with Close Area retains minimum Grade d8 and cost 2 ST, keeps the Area centred on the Crusher and uses the weapon's effective Reach as its radius. It does not increase the destruction scale or modify Seismic Wave's cone; likewise, the wave does not enlarge Close Area. Larger areas require a special Source and remain separate from the Prestige wave.

The Crusher's ordinary Signature pushes 3 m on a Clean Hit. When the same Technique applies Colossal Launch to the same target, resolve the chosen launch according to that effect without adding a second launch for free through the Signature. The 3 m push on Seismic Wave's additional targets remains separate from the initial target's launch.

Seismic Wave requires the sole Bonus Action on your turn. If activating Haki requires that action, you cannot also use it for the wave on the same turn; an already active Colour can accompany compatible blows according to its own rules. The passive environmental scale does not consume this action.

Colossus Stop uses the Reaction. You can use it even after spending the Bonus Action if you have the Reaction, 3 ST and all the conditions of Absolute Centre of Gravity.

Rebound Blow, Counterweight and other reactive abilities continue to require the available Reaction: Prestige grants no further Reactions.

4.6 SNIPER COMBINATIONS

Decisive Shot and Surgical Precision can accompany the same attack against a single target. Before the shot, spend the Bonus Action and 2 ST for Decisive Shot and declare the targeted point, paying another 2 ST for Surgical Precision. The attack retains its own defences and any Technique costs. If it hits, add the Cunning roll to damage, and the blow is considered Clean, also satisfying the requirement for the targeted consequence.

Example: the shot deals 12 ordinary damage, and the additional Cunning roll gives 19. A successful blow against the hand deals 31 damage before reductions and prevents use of that hand until the end of the target's next turn. The two Talents cost 4 ST; if Impossible Shot is also needed, the total rises to 6 ST, in addition to any Technique costs.

Decisive Shot requires the turn's sole Bonus Action. On the same turn, you cannot also use it for Rapid Reload or activate Haki requiring that action. An already active Colour can accompany compatible attacks according to its own rules.

Sovereign Interdiction uses the Reaction and can be used after spending the Bonus Action on your turn if you have the required Reaction and Stamina. Surgical Precision can modify that shot by paying another 2 ST and declaring the chosen point beforehand; Decisive Shot instead prepares the next shot by the end of your turn and does not wait for a Reaction on other turns.

Bullet Dance concerns Techniques with several targets and does not accompany Decisive Shot or Surgical Precision, which require a single target. Impossible Shot and Shot Geometry can accompany the sequence when the path is valid and all costs are paid. The spatial requirements of Ricochet or Chain remain necessary.

4.7 ULTIMATE

Ultimates retain their base version and specific rules. Reaching Saikyō in Attributes expands the scales provided by this module; reaching Saikyō in the Skill modifies its rolls when required. Neither introduces a Prestige evolution of the Ultimate.

The Striker's Smash Hit retains its own rules. This module's abilities do not grant it further actions, effects or attacks when its resolution excludes them.

The Swordsman's Asura retains its exclusions of additional Talents and abilities. For its rolls, use the blade's original Grade, without Absolute Blade Mastery's replacement. Classifying mobility and launches differently as Attribute upgrades does not authorise adding effects to the Ultimate: the compatibilities specified by its description remain necessary.

The Sniper's Lead Storm retains its current version costing 5 ST, once per combat, and follows its specific rules. It gains no Prestige evolution and does not apply Decisive Shot, Surgical Precision, Sovereign Interdiction, Bullet Dance or other Talents and effects excluded by its description. Compatible ammunition effects remain the expressly provided exception. The distinction between Attributes and Skills does not authorise ignoring the Ultimate's exclusions.

The Crusher's Cataclysm retains its version costing 5 ST, once per combat, with the GM's permission provided by the manual. It retains the direct impact of 4 Weapon Dice and its own second resolution within 5 m of 2 Weapon Dice, with a 5 m push and Off-Balance. It does not apply Unstoppable Maul, Seismic Wave, Shattered Guard, Colossus Stop or other Talents, Techniques, Signature and weapon effects excluded by its description. The offensive radius of 5 m does not become Strength's destruction scale radius. Consequences for the environment follow the situation, materials and SP.

4.8 ATTRIBUTE UPGRADE COSTS

UPGRADE	OWN COST	REQUIRED ABILITY
Environmental destruction	0 ST	Striker or Crusher basic attack or Technique with a Strength impact on the environment; no additional action
Colossal Launch	0 ST	Launch in the Technique; Crash for collision damage
Lightning Displacement	0 ST	Dash in the Technique
Superhuman Agility	0 ST	Leap in the Technique for upgraded jumps; footholds according to the Technique threshold
Superhuman Ballistic Calculation	0 ST	Ranged or thrown weapon compatible with the Sniper; target position located
Shot Geometry	0 ST	Impossible Shot, which retains its own cost of 2 ST

Effects occupy their own slots and retain ordinary costs: Launch 1 ST, Crash 2 ST, Dash 1 ST and Leap 1 ST. An additional cost of 0 ST for the upgrade does not make the Technique using it free. Pursue is removed from the Builder.

4.9 PRESTIGE TALENT COSTS

TALENT	TYPE	BONUS	COST	MAIN LIMIT
Titan's Power	Passive	No	0 ST	One Strength roll added per compatible successful blow
Striker's Titanic Wave	Active	Yes	2 additional ST	One successful blow expanded on your turn
Absolute Precision	Passive	No	0 ST	Enables Breaking Point, which costs 2 ST and requires a slot
Endless Flurry	Active	Yes	1 ST for the first extra attack, 2 ST for the second, 3 ST for the third, then a progressive +1 ST for each subsequent extra attack; in addition to all normal costs of any Technique used.	Available Stamina and normal costs of every Technique
Sovereign Slash	Passive	No	1 ST per use	Compatible Swordsman Technique
Colossal Cut	Active	Yes	2 ST	Next blow on the turn against

TALENT	TYPE	BONUS	COST	MAIN LIMIT
				one element
Impassable Guard	Reactive	No	2 ST and Reaction	One interceptable attack
Absolute Blade Mastery	Passive	No	0 ST	d20 Weapon Die for basic attacks and Parries
Unstoppable Maul	Active	No	3 ST in total	One use on your turn; replaces Mastery
Seismic Wave	Active	Yes	3 ST in total	Successful Strength blow on your turn and contact with a surface
Shattered Guard	Passive	No	0 ST	One direct blow on your turn; guard opened on a Clean Hit
Colossus Stop	Reactive	No	3 ST and Reaction	Absolute Centre of Gravity and an enemy entering reach
Decisive Shot	Active	Yes	2 ST	Next shot against a single target by the end of your turn
Surgical Precision	Modifier	No	2 ST	Single target; targeted consequence only on a Clean Hit
Sovereign Interdiction	Reactive	No	2 ST and Reaction	Enemy Action not yet completed and concretely interruptible
Bullet Dance	Passive	No	1 ST per use	Sniper Technique with Ricochet or Chain

The Bonus column indicates whether the Talent requires the Bonus Action. Costs are added to the ordinary costs of the ability used, except for expressly stated replacements: Unstoppable Maul's 3 ST replace Mastery's 2 ST, and Seismic Wave's 3 ST replace Shock Wave's 2 ST. Any Technique costs remain payable. Breaking Point requires a Clean Hit and pays its own 2 ST even if the blow misses or does not achieve the required margin.

4.10 RESOLUTION SEQUENCE

1. Identify the Role, Role Skill and Attribute specified by the blow.

2. Check automatic Attribute upgrades and Talents actually acquired through the Skill.
3. Check effects, slots, reach, mobility budget, any SP, contact with the environment, Talent prerequisites and Technique compatibility.
4. Declare and pay for modifiers before rolling, then resolve attack and defences. After a successful blow you may activate compatible propagations, paying the Bonus Action and their cost.
5. Apply damage, environmental attenuation, launch, any first Crash and targeted consequences or interruptions according to their respective rules.
6. Update ST, remaining special metres, and available Reaction and Bonus Action.

CHAPTER 05

ROLE SKILL PRESTIGE

This document collects 30 Prestige Talents in 10 catalogues: Captain, Musician, the Doctor's three specialisations, the Engineer's two specialisations, Navigator, Archaeologist and Cook. Each path develops its own Role Skill and makes the abilities of the chosen specialisation more powerful.

You acquire one Talent at d20+d4, a second at d20+d8 and a third at d20+d12. At Saikyō, already acquired Talents improve. Descriptions specify prerequisites, activation, costs, use limits and final-form effects.

ROLE OR STYLE	ROLE SKILL
Captain	Communication
Musician	Art
Toxicologist Doctor	Medicine
Infirmary Doctor	Medicine
Chemist Doctor	Medicine
Mechanic Engineer	Mechanics
Carpenter Engineer	Carpentry
Navigator	Navigation
Archaeologist	Archaeology
Cook	Cooking

5.1 SHARED RULES

5.2 ACQUISITION AND PROGRESSION

Each catalogue contains three Prestige Talents. At thresholds granting a choice, acquire a single Talent from your own path, respecting the specified prerequisites. The order is free: the three Talents are not automatically assigned to the three thresholds.

PRESTIGE	FULL SKILL DIE	ACQUISITION
I	d20+d4	First Talent choice
II	d20+d6	Growth of the Skill and effects depending on it
III	d20+d8	Second Talent choice
IV	d20+d10	Growth of the Skill and effects depending on it
V	d20+d12	Third Talent choice
Saikyō	d20+d20	Upgrade of acquired Talents

Saikyō does not grant a fourth Talent. Its improvements concern the Role Skill of the catalogue used. Increasing an Attribute, Spirit or a Haki Colour does not automatically unlock these Talents.

Toxicologist, Nurse and Chemist use Medicine but remain separate specialisations.

Knowing a Skill allows you to make the normal Checks provided by the rules; access to Prestige Talents instead depends on your acquired Role or Style.

A Talent evolving an ability requires that ability. If it evolves a Mastery, its normal Basic and Improved prerequisites are also required. Ordinary Talents continue to apply in the parts the Prestige description does not replace.

5.3 ACTIONS, COSTS AND SHARED LIMITS

Each ability uses the specified Action, Bonus Action or Reaction. The normal availability of a single Bonus Action per turn is shared between Role Talents, active Haki effects and Spirit upgrades. Preparing an attack or preparation with a Bonus Action does not also include the Action needed to use it, unless the Talent expressly says so.

The listed cost is the cost of the upgraded form and replaces that of the same ordinary ability. Ammunition, ingredients, machinery energy, portions and Techniques' own costs remain necessary where relevant. Acquiring the evolution makes the previous version unavailable as a separate choice. Its benefits that are not replaced remain incorporated into the evolution.

When Prestige increases an ability's uses, the new limit replaces the previous one. Uses of the ordinary and upgraded form draw on the same limit: three uses do not become three plus the base form's one. Per-combat and per-naval-battle limits are counted in their respective encounter.

5.4 SKILL ROLLS, DAMAGE AND RECOVERY

A full Skill roll includes the d20 and the additional Prestige die. With Medicine d20+d8, two full Medicine rolls are two separate d20+d8 rolls, whose results are added.

When the Skill quantifies a bonus or recovery, an Attribute is added only if the rule expressly requires it.

The additional die's maximum value is 4, 6, 8, 10, 12 or 20, according to the Skill's Prestige. This value is a fixed bonus: it requires no roll. Normal preparation, repair, attack and defence checks instead retain the formula specified by the ability used.

Multipliers apply to the component described by the Talent. Tripling at Saikyō replaces doubling and is not multiplied by two again. Recovered HP, ST and SP cannot exceed their respective maximums, unless a maximum increase is expressly provided, as with Legendary Ship.

Active Defence succeeds when it equals or exceeds the attack roll. Normal attack rolls, Saves and defences remain necessary unless a Talent expressly modifies them. Recovering ST through food or music does not automatically recover Haki PIP.

5.5 PREPARATION AND ULTIMATES

Dishes, preparations, antidotes, nautical charts and shipyard work must actually be prepared. A service or activation Talent uses what the character already has. Complete construction and renovation require materials, tools and the project's time.

No Prestige evolution of Ultimates is introduced. All Hands, Board!, Song of the Soul, Black Tide, No One Dies Under My Care, Chain Reaction, Everything at Full Capacity, She Will Not Sink, The Course No One Knows, The Voice of Stones and The Legendary Banquet retain their ordinary rules, costs and requirements.

This document's upgrades apply to ordinary abilities and do not automatically upgrade these Ultimates.

CHAPTER 06

CAPTAIN

Role Skill: Communication. Talents upgrade orders, encouragement and tactical preparation. Shared Spirit upgrades follow their own path.

6.1 SOVEREIGN ORDER

Evolves: Captain's Order — Mastery. Activation: Bonus Action. Cost: 3 ST. Limit: 3 orders per combat.

Choose an ally who can see or hear you. The companion immediately performs a Movement and an Action outside their own turn, retaining the Advantage provided by Mastery. The intervention does not consume their normal turn.

The ally pays the costs of Techniques and other abilities they use. The Talent grants no additional Bonus Action. The limit of three orders replaces Mastery's two and is shared with ordinary orders.

Saikyō: by spending 4 ST, you give the same order to two allies. Each gains their own Movement and Action with Mastery's benefits. The order counts as one use of the three available.

6.2 LEGENDARY SHOUT

Evolves: War Cry. Activation: Bonus Action. Cost: 3 ST. Limit: once per combat, shared with War Cry.

Allies who hear you remove one removable negative Status, as in the ordinary ability. On their next roll they add the result of a full Communication roll of yours, replacing War Cry's normal bonus die.

Roll Communication once, without adding Spirit. All affected companions receive the same result. The bonus applies to the check roll, including a relevant attack roll, and is not added directly to damage.

Saikyō: by spending 5 ST, the same result applies to each ally's next two rolls instead of one. The limit remains once per combat.

6.3 THE PERFECT PLAN

Evolves: The Plan. Activation: combat preparation. Pool: 6 shared rerolls.

When you prepare a battle under The Plan's conditions, the crew has six shared rerolls instead of four. Each point retains the normal use specified for a reroll.

You may use the same pool for a Countermove. When you perceive the declaration of an enemy attack, before the attack roll, spend your Reaction and two rerolls. Choose two allies reached by your commands, possibly including yourself: each immediately moves up to their own Speed without provoking Reaction attacks caused by disengagement.

Anyone who actually leaves the attack's reach or area avoids being involved. Anyone remaining within its reach resolves defences normally. The Countermove uses the shared pool and creates no additional points.

Saikyō: the pool becomes eight rerolls, and a Countermove can move three characters. The cost remains one Reaction and two points from the same pool.

CHAPTER 07

MUSICIAN

Role Skill: Art. Each Song remains a Technique with only one Melody. Performance retains the normal rules: benefits to allies and enemy Saves where provided.

7.1 LIVING ORCHESTRA

Evolves: Counterpoint — Mastery. Type: passive. Additional cost: none.

You may keep three Songs active simultaneously, retaining Mastery's free ST upkeep.

With a single Action you may begin two separate Songs. Pay both activation costs; Long Breath applies separately to each. Songs retain their own targets, reaches, durations and effects.

Copies of the same Melody do not stack the same benefit on the same target. They can be dedicated to different targets. Living Orchestra does not combine two Melodies into one Technique.

Sustained Songs still require the Musician to be physically able to play and the targets to hear them. Living Orchestra modifies the number of Songs and their activation, but does not allow them to be maintained during Unconsciousness, loss of the instrument or other conditions making performance physically impossible.

Saikyō: you may keep four Songs active simultaneously. Activating two Songs with a single Action retains the operation described.

7.2 LEGENDARY RESONANCE

Type: passive on ordinary Songs. Additional cost: none.

Your Songs double the number of ST recovery dice and bonus dice on allies' checks. They also double the amount of ST discounts on Techniques, respecting the minimum of 1 ST where specified.

Saikyō: these values become triple those of the ordinary Melody, replacing doubling.

MELODY	WITH LEGENDARY RESONANCE	AT SAIKYŌ
Tune of Vigour	Recovery of 2d6 ST	Recovery of 3d6 ST
War March	+2d4 to the specified attack roll	+3d4 to the specified attack roll
Crescendo	Discount of 4 ST on the specified Technique	Discount of 6 ST on the specified Technique

Advantage, rerolls, reach, number of targets, activation costs and PIP discounts retain their ordinary values. The Talent modifies only the numerical benefits described; it does not modify the effect of the Song of the Soul Ultimate.

Legendary Resonance increases Tune of Vigour's recovery to 2d6, or 3d6 at Saikyō, but does not modify the limit of once per scene for each beneficiary.

7.3 SOVEREIGN REQUIEM

Evolves: Requiem. Activation: Action. Cost: 4 ST. Reach: 50 m radius.

You perform a superior version of Requiem. All enemies within the radius who can hear you make a Spirit Save. The Threshold is determined by Art's current Prestige Grade according to the universal Saves and Prestige table (§1.1). The instrument's Threshold is not added to the Prestige value.

Anyone who fails suffers Disadvantage on all rolls until the start of your next turn. Sovereign Requiem deals no direct damage and requires no attack roll. It does not use Mocking Requiem separately: this form replaces its performance when used.

Saikyō: cost 5 ST and radius 500 metres. If you have Crew Chorus and at least two companions actually participate in singing, reach doubles normally up to 1,000 metres.

Even at these distances targets must actually be able to hear the music: the radius does not allow the Song to automatically pass through obstacles that completely block sound.

CHAPTER 08

TOXICOLOGIST

Role: Doctor. Role Skill: Medicine. The catalogue upgrades toxins, poison dispersal and interventions with prepared antidotes.

8.1 SOVEREIGN TOXINS

Evolves: Refined Toxins — Mastery. Type: passive on your poisons.

When a dose of yours classified as Poison requires a Save, compare the Threshold recorded on the poison's sheet with the Prestige Threshold corresponding to your current Medicine Grade. Use the higher of the two. This benefit replaces the normal +2 from Refined Toxins — Basic and does not stack with it.

MEDICINE	MINIMUM THRESHOLD WITH SOVEREIGN TOXINS
d20+d4 · Prestige I	13
d20+d6 · Prestige II	14
d20+d8 · Prestige III	15
d20+d10 · Prestige IV	16
d20+d12 · Prestige V	17
d20+d20 · Saikyō	21

When a target fails the Save, reduce an Attribute of your choice by two steps until an effective antidote is administered. The reduction follows the dice progression, including Prestige steps, and cannot bring the Attribute below d4.

Repeated applications to the same Attribute do not stack reductions.

Saikyō: the reduction becomes three steps. For the Save, compare the poison's own Threshold with Medicine's minimum Threshold of 21 at Saikyō and use the higher.

8.2 PESTILENT MIST

Evolves: Toxic Cloud. Activation: Action. Cost: 4 ST. Duration: 3 turns. Centre placement: within 20 m.

Pestilent Mist uses and consumes a prepared dose of Poison compatible with Inhalation, like Toxic Cloud. The Action includes dispersing the substance and requires no attack roll.

The origin point must be visible and physically reachable by the substance; solid obstacles prevent placing it beyond them.

When the cloud appears, creatures already present immediately make the normal Save. Subsequently they make the Save when entering the cloud or starting their turn inside it. If they fail, they become Poisoned and Blinded under Toxic Cloud's normal rules.

Maximum radius depends on Medicine:

MEDICINE	MAXIMUM CLOUD RADIUS
d20+d4 or d20+d6	10 m
d20+d8 or d20+d10	20 m
d20+d12	50 m
Saikyō	100 m

If you have Sovereign Toxins, use the poison's effective Threshold after any replacement by Medicine's minimum Prestige Threshold. On a failed Save, also apply the Attribute reduction. Exposed allies make the Save normally. Prophylaxis protects only those previously treated against that toxin.

The rules for walls, ventilation, water, masks and respiratory protection apply normally.

Saikyō: cost 5 ST, centre within 100 m, duration 5 turns and maximum radius 100 m.

8.3 PERFECT ANTIDOTE

Prerequisites: Antidote Master and Instant Antidote. Activation: Reaction. Cost: 3 ST. Limit: 3 uses per combat. Reach: one ally within 5 m.

You administer a dose of antidote prepared by you. The intervention neutralises all active poisons on the target, removes the Statuses caused by those substances and restores Attributes reduced by toxins.

You must have and consume the dose. The three uses replace Instant Antidote's one and are shared with its ordinary form. HP already lost remain lost.

The distance represents how far you can reach the target with the Reaction. The path must be traversable and you must be able to physically administer the dose.

Saikyō: reach becomes 10 m. The target is also immune, for the rest of combat, to the toxins just neutralised.

CHAPTER 09

NURSE

Role: Doctor, Infirmary Style. Role Skill: Medicine. The catalogue upgrades field healing, resuscitation and diagnosis of the body.

9.1 LEGENDARY SURGERY

Evolves: Surgeon's Hands — Mastery. Type: passive on successful Field Treatment.

Your Field Treatment restores twice the HP normally recovered. First calculate ordinary recovery, including all applicable bonuses, then double the total.

The removal of one removable negative Status granted by Surgeon's Hands — Mastery becomes the removal of two removable negative Statuses.

The following remain necessary:

- The normal Field Treatment Check.
- Materials.
- Physical access to the patient.
- The normal Field Treatment limit on the same patient.

Surgeon's Hands — Improved continues to determine the number of patients treatable with a single Action.

Saikyō: recovery becomes triple that of ordinary Field Treatment, and you may remove up to three removable negative Statuses. The amount of ST recovered from other benefits is not multiplied.

9.2 PRODIGIOUS INTERVENTION

Evolves: Immediate Intervention. Also requires: Resuscitation Specialist. Activation: Reaction. Cost: 3 ST. Limit: 3 uses per combat. Reach: one ally within 10 m.

When an ally who is still alive reaches 0 HP, you may use the Reaction to reach them and intervene immediately. The necessary displacement is part of the Reaction, but the path must be traversable and you must be able to physically reach the patient.

You Stabilise them and restore HP equal to the result of one full Medicine roll, up to their Maximum HP. This recovery replaces Resuscitation Specialist's 1d4 and does not stack with it. The roll quantifies recovery and is not a second success Check. The ally regains consciousness thanks to the recovered HP.

This is resuscitation separate from Field Treatment:

- It does not consume the Field Treatment limit on the patient.
- It does not receive Legendary Surgery's multiplier.

The three uses replace Immediate Intervention's one and are shared with its ordinary form.

Saikyō: you may intervene within 20 m, retaining the cost, limit and recovery formula.

9.3 ABSOLUTE DIAGNOSIS

Evolves: Diagnosis. Activation: Bonus Action. Cost: 3 ST. Target: one living enemy you can see.

Make the normal Medicine check against the target's Passive Defence. If you succeed, you identify a weakness in their body and may communicate it to your companions.

Until the start of your second subsequent turn, attacks that concretely exploit that weakness consider only half the target's fixed Damage Reduction, rounded down. Passive Defence, Active Defence and other defensive effects continue to apply.

You may have only one Absolute Diagnosis active. Diagnosis's ordinary Advantage remains for the first ally who exploits the weakness in combat.

Saikyō: attacks exploiting the weakness ignore all fixed Damage Reduction within the same duration window. Other defences retain their operation.

CHAPTER 10

CHEMIST

Role: Doctor. Role Skill: Medicine. The catalogue upgrades initial damage, composition and dispersion of preparations.

10.1 CATASTROPHIC REACTIONS

Evolves: Violent Reactions — Mastery. Type: passive on offensive preparations.

The initial damage produced by one of your preparations becomes twice its ordinary value, including the additional die already granted by Violent Reactions — Basic.

Calculate damage once, apply the multiplier, then resolve normal defences and reductions. Statuses retain their operation. Burns and other damage subsequent to the initial impact are not multiplied.

Initial damage means the Damage Die recorded on the preparation's sheet, including the additional die from Violent Reactions — Basic. Burn and other subsequent damage are not part of initial damage and are not multiplied.

Saikyō: initial damage becomes triple its ordinary value, replacing doubling.

10.2 PERFECT SYNTHESIS

Prerequisites: Reactive Reagents and Violent Reactions — Mastery. Type: passive during preparation.

Both preparations must have a complete sheet and must actually be preparable by the Chemist.

You may combine two different reagent families in one dose, using the ingredients required by both. The compound receives the distinct effects of both components.

- Explosive and incendiary: explosion, Off-Balance and burn, according to the effects of the preparations used.
- Acid and smoke: corrosion and Blinded, according to the effects of the preparations used.

For initial damage, use that of the more powerful component only once: the full damage of both components is not added together. Copies of the same Status do not stack. Each component retains its own duration.

The compound's ordinary area uses the smaller radius of its components. Use requires a single ordinary Action and consumes the combined dose. Catastrophic Reactions applies to the resulting initial damage if you have that Talent.

Saikyō: you may combine three different families in the same dose, retaining the same damage, area and duration rules.

10.3 SOVEREIGN DISPERSION

Prerequisites: Precise Throw and Violent Reactions — Improved. Activation: Bonus Action, before use. Cost: 3 ST.

You prepare the dispersion of a preparation capable of affecting an area. For that use, you may choose a radius up to the maximum indicated by Medicine and throw the preparation within 30 m.

MEDICINE	TOTAL MAXIMUM RADIUS
d20+d4 or d20+d6	10 m
d20+d8 or d20+d10	20 m
d20+d12	50 m
Saikyō	100 m

These are total radii, already including the doubling from Violent Reactions — Improved. Precise Throw continues to determine the targets you can exclude. Damage, Statuses and Saves follow the preparation's rules.

The Bonus Action prepares the effect: you must still use the ordinary Action to throw the preparation and consume the dose.

The normal rules for using Area preparations apply. The origin point must be visible and reachable by the throw; walls and solid obstacles prevent placing it beyond them. The dose is consumed normally.

Precise Throw continues to allow you to exclude the specified targets. Sovereign Dispersion does not modify the preparation's damage or Statuses: it modifies only its dispersal capability and throwing Reach.

Saikyō: maximum radius is 100 m, and you may throw the preparation within 100 m. The Bonus Action cost remains 3 ST.

CHAPTER 11

MECHANIC

Role: Engineer. Role Skill: Mechanics. The catalogue upgrades simultaneous machinery management, reconstruction and system tampering.

11.1 MECHANICAL DIRECTION

Evolves: Fine Tuning — Mastery. Type: passive.

With a single Action you may manage four machines instead of two. You must be able to reach their controls or use a station that actually connects them.

Each machine retains its own rolls, consumption and ammunition. The second activation granted by the Signature or Fine Tuning — Mastery remains applicable; two effects granting a second activation to the same machine do not bring it to four.

In naval battle these are activations of the systems managed, not four complete ship manoeuvres. The Talent manages machinery and grants no additional Actions to characters using or housing it.

Each additional activation pays separately for ammunition, fuel, energy and other machinery consumption. Mechanical Direction does not make devices autonomous or grant further naval manoeuvres.

Saikyō: you may manage eight machines with the same Action, retaining the conditions described.

11.2 PRODIGIOUS RECONSTRUCTION

Prerequisites: Rapid Response and Flesh and Metal. Activation: Action. Cost: 3 ST. Limit: 3 uses per combat.

With tools, spare parts and a successful repair Check, you may work even on a Destroyed device, overcoming Rapid Response's normal limit. Perform one of the following interventions:

- Machine: fully restore a damaged or destroyed mechanism or Module to working order, provided the necessary components are available.
- Cyborg still alive: restore HP equal to the sum of two full Mechanics rolls and restore one of their damaged or destroyed Modules to working order.

Recovered HP cannot exceed the maximum. A Cyborg at 0 HP regains consciousness if the intervention restores HP to them. These interventions have their own limit of three uses per combat.

Interventions on a Cyborg's body and Modules still follow the definitions and conditions of the Cyborg Manual.

Saikyō: Cyborg recovery equals three full Mechanics rolls, and you may restore two Modules in the same intervention instead of one.

11.3 MACHINE DOMINION

Evolves: Deep Sabotage. Activation: Action. Cost: 3 ST. Check: Mechanics.

You reach a control point or system connection and work on its mechanisms. On a successful check, choose up to three connected machines and decide whether to:

- Disable them for the rest of the battle, as with Deep Sabotage.
- Take control of them for the rest of the scene.

To use a captured machine you must spend the required Action and respect its ammunition, energy and operation. Tampering does not include a free activation of machinery.

To regain control, an opponent must reach the system, spend an Action and obtain a Mechanics check that equals or exceeds your tampering result.

Machine Dominion uses the normal physical access rules established by Sabotage: the Mechanic must actually be able to reach a control, connection or control point in the system.

Saikyō: you may involve all machinery belonging to the same connected system, such as a complete battery, a ship's installations or a network of industrial machines. Actual intervention on the system remains necessary.

CHAPTER 12

CARPENTER

Role: Engineer. Role Skill: Carpentry. The catalogue upgrades naval repairs, shipyard works and hull resilience.

12.1 LEGENDARY RECONSTRUCTION

Evolves: Hands on Wood — Mastery. Activation: Action. Cost: 3 ST. Limit: 3 uses per naval battle.

Make an Emergency Repair. If it succeeds:

- Calculate recovered SP normally.
- Add Hands on Wood — Basic.
- Apply any doubling from the A Repair That Holds Signature.
- Finally double the total obtained thanks to Legendary Reconstruction.

You may also restore a Destroyed Module to working order, in addition to the effects already allowed by Hands on Wood — Improved.

The necessary materials are required normally, and recovery cannot exceed Maximum SP.

The limit of three uses is shared with Hands on Wood — Mastery's ordinary restoration and replaces the previous once-only limit.

Saikyō: the final multiplier becomes ×3, and you may restore two Destroyed Modules in the same intervention.

12.2 LEGENDARY SHIP

Prerequisite: Grown Ship. Activation: completion of a construction or complete renovation in a shipyard.

The ship on which you complete the work gains +50% maximum SP, rounding up, and two additional Module slots in total, including the one already granted by Module Master.

The benefit applies only once per ship. Slots must be filled with Modules actually built and installed. The ship's capacity grants no free Modules.

Legendary Ship constitutes a permanent improvement to the ship and follows the normal Permanent Improvement rules. It does not transfer to another ship if the Carpenter changes crew or vessel.

Saikyō: the bonus becomes +100% maximum SP, and additional slots in total become three. This form replaces the previous values.

CARPENTRY	MAXIMUM SP INCREASE	TOTAL ADDITIONAL MODULE SLOTS
Prestige stages before Saikyō	+50%	2, including Module Master
Saikyō	+100%	3, including Module Master

Example: a ship that would have 80 maximum SP reaches 120 SP, or 160 SP at Saikyō.

The work requires materials, tools and the project's time, which can be days or weeks. Barricade retains its ordinary use within 5 m. Enormous bridges, walls and fortifications require actual construction work.

12.3 IMPREGNABLE HULL

Evolves: Reinforced Hull. Type: passive, after completing reinforcement work.

The ship on which you installed the reinforcements suffers half the Hull damage caused by cannon shots, ramming and other physical impacts, rounding up.

This benefit replaces the reduction of cannon shots' Damage Dice by one step granted by Reinforced Hull.

Saikyō: the ship suffers one quarter of that damage, rounding up, instead of half.

Example: a cannon shot dealing 40 SP deals 20 SP, or 10 SP at Saikyō.

CHAPTER 13

NAVIGATOR

Role Skill: Navigation. The catalogue upgrades naval evasion, crossing planning and nautical chart quality.

13.1 LEGENDARY HELMSMAN

Evolves: Born Helmsman — Mastery. Activation: Reaction. Cost: 3 ST. Limit: 3 uses per naval battle.

When an artillery salvo is about to hit your ship, make an evasive manoeuvre and cancel all shots belonging to that salvo. You must be at the helm, and the ship must be able to manoeuvre.

Separate attacks require separate uses. The limit of three uses is shared with Born Helmsman — Improved and replaces the previous once-only limit.

Saikyō: after avoiding the salvo, you may also gain or lose one distance band, according to the ship's normal movement possibilities. The displacement is part of the Reaction.

13.2 SOVEREIGN COURSE

Prerequisites: Master Course and Impossible Course. Type: passive during crossing planning.

When preparing a crossing towards a destination you have already reached, combine currents, winds and passages to complete the voyage in half the ordinary time.

Normal crossing checks and any hazards along the route remain. The Talent modifies the voyage's time and does not replace its execution.

Saikyō: time drops to one quarter of the ordinary time instead of half.

Example: a crossing normally lasting eight days takes four days, or two days at Saikyō.

13.3 LEGENDARY CARTOGRAPHY

Evolves: Cartographer. Type: passive during chart creation.

The nautical charts you create grant a full roll of your Navigation die as a bonus, replacing Cartographer's normal +d8. The die is recorded when you complete the chart.

NAVIGATION AT CREATION	CHART BONUS
d20+d4	+d20+d4
d20+d6	+d20+d6
d20+d8	+d20+d8
d20+d10	+d20+d10
d20+d12	+d20+d12
Saikyō	+d20+d20

The benefit applies to checks actually using that chart and can also be used by another navigator.

A completed chart retains its own die. To improve it you must update it through new cartographic work. At Saikyō, a chart created or updated by you grants +d20+d20.

CHAPTER 14

ARCHAEOLOGIST

Role Skill: Archaeology. The catalogue upgrades reading inscriptions, knowledge applicable to discoveries and use of existing mechanisms.

14.1 ABSOLUTE READING

Evolves: Dead Writing — Mastery. Type: passive.

When you succeed on a translation check, you obtain the complete translation and hidden detail provided by the Signature, even without reaching a +4 margin.

Studying a single readable inscription or stele, including a Poneglyph, takes at most one hour. If the work would normally require less time, the shorter time remains. Archives and texts comprising many inscriptions require studying the individual parts.

Saikyō: maximum time for a single inscription drops to ten minutes.

14.2 LIVING ARCHIVE

Evolves: Memory of the World. Activation: five minutes of examination. Limit: once per scene.

By examining an ancient place, artefact or structure you may obtain concrete answers to two of the following questions of your choice:

- What was its original function?
- What danger or defence is documented by the evidence present?
- What is the correct way to access, use or deactivate it?

Answers come from the subject's history and preserved traces: inscriptions, architecture, symbols, materials and knowledge already acquired. They are information usable in exploration.

You can discover, for example, that a room was intended for executions, that the floor activates a counterweight or that a door opens through a precise sequence of symbols.

Saikyō: you obtain answers to all three questions in the same examination, retaining the time and limit described.

14.3 MASTER OF ANCIENT MECHANISMS

Prerequisites: Ancient Mechanisms and Ancient Trap. Activation: Reaction. Cost: 2 ST. Limit: 3 uses per combat.

When a creature reaches a trap's activation point, or an ancient mechanism is about to trigger, you may intervene immediately to activate it, block activation or reverse its operation, if the device permits it.

You must have identified the mechanism and be able to reach a control or usable connection, such as a lever, rope, trigger or panel. Apply the effects, damage and Saves already provided by the device.

Saikyō: you may operate two connected mechanisms with the same Reaction, paying the cost once and consuming only one use.

You can thus close a door while activating the trap in front of it, or stop a counterweight and open the passage it releases.

CHAPTER 15

COOK

Role Skill: Cooking. The catalogue upgrades the effectiveness of dishes and the serving of genuinely prepared portions. Cooking retains ingredients, times, the Spirit + Cooking check and the recipe's outcome.

15.1 LEGENDARY NOURISHMENT

Evolves: Cook's Hand — Mastery. Type: passive on ordinary dishes.

Your dishes restore twice the HP and ST normally recovered. First calculate ordinary recovery, including Cook's Hand — Basic and the ingredients used, then double the result.

If the dish recovers both resources, Legendary Nourishment multiplies both. It does not add a resource the recipe does not recover.

Your dishes also remove up to two removable negative Statuses, instead of the one provided by Cook's Hand — Mastery. Every dish continues to recover only the resources provided by its own recipe and retains the normal number of recipients.

Saikyō: recovery becomes triple that of the ordinary dish, and removable negative Statuses become three.

Example: a dish that normally restores 12 HP and 4 ST restores 24 and 8, or 36 and 12 at Saikyō.

15.2 SOVEREIGN SERVICE

Evolves: Battlefield Service. Activation: Bonus Action. Cost: 3 ST. Targets: up to three conscious characters within 10 m, possibly including yourself.

You serve already prepared portions. Recipients immediately consume the food and receive the dish's effects without spending an Action.

You must have enough portions and consume those actually served. Cook's Hand — Improved continues to determine how many people a preparation can feed. Legendary Nourishment applies if you have that Talent.

Saikyō: by spending 4 ST, you serve up to five conscious characters within 20 m. Dishes are prepared before combat.

15.3 LEGENDARY SECOND FIRE

Evolves: Second Fire. Activation: Reaction. Cost: 2 ST. Limit: 3 uses per combat. Reach: one conscious companion within 10 m.

When the companion drops below half their HP, you may immediately serve them an already prepared portion. The recipient receives the dish's full effects, replacing Second Fire's normal recovery of 1d6 ST.

The portion is consumed. If you have Legendary Nourishment, its benefits also apply. The three uses replace the ordinary once-per-combat limit and are shared with the base form.

Saikyō: reach becomes 20 m, and you may intervene when the companion suffers damage even if they remain above half their HP. They must still be conscious and able to consume the portion. Cost and limit remain as described.

CHAPTER 16

SUMMARY OF ABILITIES WITH COSTS

The table lists activations spending ST or pool points. Prerequisites, targets, preparation and duration remain as given in the full descriptions. Passive Talents and preparations with no ST cost follow their respective sections.

PATH	TALENT	ACTIVATION	COST	LIMIT
Captain	Sovereign Order	Bonus	3 ST or 4 at Saikyō	3 orders per combat
Captain	Legendary Shout	Bonus	3 ST or 5 at Saikyō	1 per combat
Captain	The Perfect Plan Countermove	Reaction	2 shared rerolls	Pool of 6 or 8 at Saikyō
Musician	Sovereign Requiem	Action	4 ST or 5 at Saikyō	According to available Actions and ST
Toxicologist	Pestilent Mist	Action	4 ST or 5 at Saikyō	According to available Actions and ST
Toxicologist	Perfect Antidote	Reaction	3 ST	3 per combat
Nurse	Prodigious Intervention	Reaction	3 ST	3 per combat
Nurse	Absolute Diagnosis	Bonus	3 ST	1 active diagnosis
Chemist	Sovereign Dispersion	Bonus	3 ST	Requires Action and dose
Mechanic	Prodigious Reconstruction	Action	3 ST	3 per combat
Mechanic	Machine Dominion	Action	3 ST	According to available Actions and ST
Carpenter	Legendary Reconstruction	Action	3 ST	3 per naval battle
Navigator	Legendary Helmsman	Reaction	3 ST	3 per naval battle
Archaeologist	Master of Ancient Mechanisms	Reaction	2 ST	3 per combat
Cook	Sovereign Service	Bonus	3 ST or 4 at Saikyō	Available prepared portions
Cook	Legendary Second Fire	Reaction	2 ST	3 per combat

Every activation respects the ordinary availability of Actions, Bonus Actions and Reactions. The evolved version also replaces the previous version when counting uses: limits do not stack.

CHAPTER 17

SPIRIT AND HAKI: SHARED RULES

This document collects Spirit Attribute Prestige and upgrades to the active effects of the three Haki Colours. Spirit offers three upgrades shared by all Roles; Armament and Observation evolve three effects each. Conqueror's Haki follows only three Prestige stages assigned by the GM: Prestige I, Prestige II and Saikyō.

Maximum pools remain 5 Armament PIP, 5 Observation PIP and 3 Conqueror's PIP. Prestige increases effect power and allows recovery through Resurgence of Will. The passives already provided for the Colours remain those of the current rules.

17.1 SHARED RULES

17.2 SPIRIT AND COLOUR PROGRESSION

The Armament die and Observation die cannot exceed the Spirit die, including the additional Prestige die. With Spirit d20+d8, for example, each of these Colours can reach at most d20+d8. Spirit's growth raises this limit but does not automatically advance Colours: each Haki grows according to its own path and the GM's decisions.

Conqueror's Haki has no die. Access to its Prestige stages depends exclusively on the GM's choice and the character's development in the campaign. It requires no numerical Spirit threshold.

The Sniper's Observation Role Skill and Observation Haki are two separate progressions. This document's upgrades belong to Haki and are accessible to any Role with the required Colour.

SPIRIT, ARMAMENT AND OBSERVATION PRESTIGE	FULL DIE	NEW UPGRADES
I	d20 +d4	First upgrade
II	d20 +d6	Growth of already acquired effects
III	d20 +d8	Second upgrade
IV	d20 +d10	Growth of already acquired effects
V	d20 +d12	Third upgrade
Saikyō	d20 +d20	Maximum evolution of already acquired effects

For Spirit, choose one upgrade from the catalogue at each indicated threshold. For Armament and Observation, effects unlock at the thresholds specified in their respective sections. Saikyō does not add a fourth upgrade.

Conqueror's has its own progression: Prestige I, Prestige II, Saikyō. These names indicate its three stages and do not correspond to the dice in the previous table.

17.3 PIP POOLS AND RECOVERY

Each Colour has a separate pool. An Armament cost is paid with Armament PIP; an Observation cost with Observation PIP; a Conqueror's cost with Conqueror's PIP. PIP already present cannot be transferred from one pool to another.

Ordinary PIP progression remains as already specified. Armament and Observation respectively have 1, 2, 3, 4 and 5 PIP at Grades d6, d8, d10, d12 and d20. Conqueror's has 1 PIP at Awakening, 2 at Dominion and 3 at Absolute. Prestige does not increase these maximums.

POOL	MAXIMUM IN PRESTIGE	ORDINARY RECOVERY	RECOVERY DURING COMBAT
Armament	5 PIP	Short or Long Rest	Resurgence of Will
Observation	5 PIP	Short or Long Rest	Resurgence of Will
Conqueror's	3 PIP	Short or Long Rest	Resurgence of Will

A Short or Long Rest restores spent PIP up to the maximum of their pool. Recovering Stamina does not automatically restore PIP. Resurgence recovers a total amount to distribute among your acquired Colours, always respecting their respective maximums.

17.4 ACTIVATION AND BONUS ACTION

Activating a Colour requires a Bonus Action and 1 PIP from that Colour. To use one of its active effects, the Colour must already be active. Each active effect in turn requires a Bonus Action and the cost specified in its description.

Colour activation and activation of one of its effects are two separate uses of the Bonus Action. The normal availability of a single Bonus Action per turn prevents performing both on the same turn. Colour Attunement allows several Colours to be activated together, but does not also include their active effects.

The listed cost for an upgrade is that effect's full cost: it is not added to the base version's cost. The PIP needed to turn on an inactive Colour remains a separate cost.

Effects preparing an attack are declared on your turn before the attack roll. They still require the Action and any costs of the Technique used. Effects preparing a defence are activated on your turn and apply within the indicated window; they do not become free Reactions.

Role Talents, Resurgence of Will and active Haki effects share the same availability of Bonus Actions. An effect already active and still within its duration can accompany a Talent activated on a later turn, respecting the costs and conditions of both.

17.5 UPKEEP AND DURATIONS

From d12 onwards, Armament costs no Stamina to keep active, including in Prestige. Observation and Conqueror's retain the ordinary upkeep of 1 Stamina per turn for each active Colour, where specified.

PIP pay for activation and active effects. Reducing a pool to zero does not by itself turn off an already active Colour: its ordinary use remains possible as long as it is maintained. Without sufficient PIP, however, other paid effects cannot be activated. If upkeep requires ST, you must continue to pay it; if free, the already activated Colour stays active without spending ST, even at 0 PIP. At 0 PIP you cannot turn on an inactive Colour. Effects already paid for retain only the duration and uses specified in their description.

For this document's personal upgrades, duration includes the activation turn. A duration of 1 turn ends at the start of your next turn; 2 turns, at the start of the second subsequent turn; 3 turns, at the start of the third subsequent turn. Effects on a single attack end when that attack is resolved and must be used on the turn they are prepared.

Upgraded persistent effects require the corresponding Colour to remain active. If the Colour is interrupted, the effect also ends. Imperial Pressure has a duration expressed in the target's turns and follows its specific rule.

17.6 ROLLS, DAMAGE AND DEFENCES

A full Haki roll includes the d20 and the additional die from its Prestige. Two Observation rolls at d20+d8 mean two separate d20+d8 rolls. The Colour's relevant passives continue to apply according to ordinary rules.

Damage Dice, abbreviated DD, are those specified by the attack or Technique. Attribute, Skill and Haki rolls and fixed bonuses retain their own treatment unless a rule expressly includes them in DD. An effect modifying DD does not automatically modify all damage components.

Offensive Armament adds its own contribution to damage in the cases already permitted. Defensive Armament contributes to compatible Active Defence: it is not automatically added to Passive Defence. Armament Armour retains its specific fixed Passive Defence bonus.

Active Defence succeeds when the result is greater than or equal to the attack roll. A tie favours the defender. The upgrades described here do not make an attack automatic and do not remove defences or Damage Reduction, except for the specific exclusion of active Observation anticipation provided by Unreadable Will.

Costs are paid on declaration. A failed roll does not refund PIP. Base versions of effects remain available at their own costs: the character may choose not to use the upgraded version.

CHAPTER 18

SPIRIT PRESTIGE

18.1 SPIRIT PRESTIGE

18.2 ACQUIRING THE THREE UPGRADES

Spirit Prestige applies to all Roles. Choose one upgrade from Indomitable Will, Colour Attunement and Resurgence of Will at Spirit d20+d4, a second at d20+d8 and the third at d20+d12. Each upgrade can be acquired only once.

The order is free. This allows, for example, acquiring Resurgence of Will immediately and increasing its recovery with Spirit. At Saikyō, already acquired upgrades improve without adding others.

18.3 INDOMITABLE WILL

Type: passive. Cost: none. Activation: automatic on relevant rolls.

When a rule requires a Spirit roll to resist fear, intimidation or mental coercion, Spirit's d20 automatically counts as 20. Roll the additional Prestige die and any applicable Skill normally.

With Spirit d20+d8, the Attribute contribution therefore becomes 20+d8. At Spirit Saikyō, the second d20 also counts as 20: Spirit's contribution is 40, before any Skill or other permitted modifiers.

The result is still compared with the required difficulty or opposed roll. The upgrade does not guarantee success and does not modify attack rolls or damage.

Indomitable Will applies only when the effect actually provides for a Spirit check. It does not create a new check against automatic effects. In particular, it does not by itself allow Imperial Pressure to be negated.

18.4 COLOUR ATTUNEMENT

Type: active. Activation: one Bonus Action. Cost: 1 PIP for each Colour activated.

With a single Bonus Action you may activate two Haki Colours you have. At Spirit Saikyō you may activate three. Each Colour pays its own PIP from its own pool.

Armament and Observation, for example, turn on together by paying 1 Armament PIP and 1 Observation PIP. At Saikyō, you may add Conqueror's only if the character has it and has the necessary PIP.

Attunement does not reduce costs, grant new Colours or also activate Full Armour, Anticipation, Coating or other active effects together. Each Colour also retains its own ordinary upkeep costs.

18.5 RESURGENCE OF WILL

Type: active. Activation: one Bonus Action. Cost: 0 Stamina. Limit: once, then a Short or Long Rest is required to use it again.

You call upon your determination and recover a number of PIP determined by the full Spirit die. Recovery is a single total to distribute freely among Armament, Observation and Conqueror's, limited to Colours you have.

SPIRIT DIE	TOTAL RECOVERABLE PIP
d20+d4	1
d20+d6	2
d20+d8	3
d20+d10	4
d20+d12	5
d20+d20	6

No pool can exceed its maximum. PIP for which there is no room are lost: they are not kept for later and do not increase Colour capacity.

You may use Resurgence even with all pools at zero or with Colours inactive. Recovery does not automatically turn on any Colour and does not restore uses of abilities limited to once per combat.

Example: with Spirit d20+d12 you recover up to 5 PIP in total. You may allocate 2 to Armament, 2 to Observation and 1 to Conqueror's, if there is room in each pool. You do not recover 5 PIP for each Colour.

CHAPTER 19

ARMAMENT PRESTIGE

19.1 ARMAMENT PRESTIGE

19.2 EFFECT PROGRESSION

Armament evolves three existing active effects. Thresholds refer to the Armament die, which remains bound by the Spirit die. The Colour's ordinary passives continue to apply; upkeep from d12 onwards remains free in Stamina.

ARMAMENT THRESHOLD	UNLOCKED UPGRADE	INITIAL FORM COST	SAIKYŌ COST
d20+d4	Superior Full Armour	2 PIP	3 PIP
d20+d8	Superior Haki Burst	2 PIP	3 PIP
d20+d12	Persistent Ryou	4 PIP	5 PIP

19.3 SUPERIOR FULL ARMOUR

Evolves: Full Armour. Unlock: Armament d20+d4. Activation: one Bonus Action, with Armament already active.

By paying 2 Armament PIP, you halve the damage from all attacks received until the start of your next turn. The protection applies to every attack in the window, including

those with Haki.

At Saikyō, you may pay 3 PIP to keep the same protection for 2 turns: from activation until the start of your second subsequent turn.

For each attack passing your defences, halve the damage, rounding up, then apply the usual reductions. Normal defences remain usable. The protection does not automatically cover sources that are not attacks, such as a fall or environmental hazard.

Base and Superior Full Armour do not halve the same attack twice. The base version remains usable at 1 PIP to protect against a single attack, within the terms of the ordinary rules.

Example: two attacks deal 31 and 18 damage respectively before reductions. With Superior Full Armour they become 16 and 9; then apply the Damage Reduction relevant to each.

19.4 SUPERIOR HAKI BURST

Evolves: Haki Burst. Unlock: Armament d20+d8. Activation: one Bonus Action, before one of your physical attacks and with Armament already active.

You prepare an Armament burst that erupts from the point reached by the attack. Its size grows with the Armament die.

ARMAMENT DIE	BURST RADIUS	COST
d20+d8	20 m	2 PIP
d20+d10	30 m	2 PIP
d20+d12	50 m	2 PIP
d20+d20	100 m	3 PIP

The main target resolves only the original attack: they do not receive a second copy of damage from the burst. Secondary enemies within the radius are affected by the wave and may defend against the same attack roll as the original attack, using compatible defences and normally available resources.

If they fail to defend, they suffer half the attack damage relevant to the burst, rounded down, before their own Damage Reduction. The main target can therefore parry the original blow while it still has consequences for another enemy who fails their own defence. The burst does not give a second attempt to hit the main target.

The burst centre must be a point actually reached by the attack within its normal reach. The wave's radius does not extend the weapon's or Technique's reach and does not grant an additional attack.

The wave uses the attack's damage, with normally applicable contributions, but does not automatically propagate effects intended only for the main target. Launch, Crash and Technique conditions aimed only at the main target are not copied onto secondary targets. Ryou instead modifies the attack's total damage under its general rule: the reference to striking from within is narrative and does not identify a separate numerical component.

The environmental destruction scale linked to Strength remains a separate rule. It does not increase Haki Burst's radius or add a second copy of burst damage to the same characters.

The base version remains available at 1 PIP, with its ordinary radius of 5 m.

Example: the attack produces 40 damage relevant to the burst. The main target resolves that 40 damage according to ordinary defences. A secondary enemy who fails the defence resolves 20 damage, then applies their own Damage Reduction. A subsequent Crash of the main target does not increase that 20 damage.

19.5 PERSISTENT RYOU

Evolves: Ryou. Unlock: Armament d20+d12. Activation: one Bonus Action, with Armament already active.

By paying 4 Armament PIP, you maintain Ryou for 2 turns. During each of your turns included in the duration, you may apply Ryou to only one physical attack. Choose the attack before making the attack roll.

At Saikyō, you may pay 5 PIP for a duration of 3 turns, retaining the limit of one physical attack per turn of yours.

Ryou retains its ordinary operation: calculate the chosen attack's total damage normally, including all dice and bonuses actually applicable, and multiply it ×2 once. Do not separately double individual components and then multiply the result again. The reference to a blow acting from within remains descriptive and creates no mechanical category or separate damage component. Ryou does not make the blow automatic and does not prevent the target from using Passive Defence, Active Defence, Damage Reduction or other normally permitted defences, unless a specific rule says otherwise.

Attacks require their own Actions and any Technique costs. A missed attack consumes the application chosen for that turn and grants no second attempt. The Persistent Ryou upgrade does not add attacks, does not automatically apply to every blow in a Flurry and ends if Armament is interrupted.

The base version remains available at 3 PIP for the single attack specified by the rules. On turns after activating Persistent Ryou, you may use the Bonus Action for a compatible Talent because Ryou is already lasting; you must still have the resources required by the Talent.

19.6 RETAINED ORDINARY EFFECTS

Armament Armour retains its ordinary form: 2 PIP, +4 Passive Defence for 2 turns, without turning this bonus into dice added to Active Defence. It receives no fourth Prestige upgrade.

Condensed Armament, Reinforced Defence, Armament Mastery and Perfect Armament retain their current effects. More advanced rolling rules replace those they already surpass according to the rules, without adding further rerolls solely because Prestige is present.

CHAPTER 20

OBSERVATION PRESTIGE

20.1 OBSERVATION PRESTIGE

20.2 EFFECT PROGRESSION

Observation receives three upgrades aimed at personal reading of combat. Thresholds refer to the Observation Haki die, within the limit imposed by Spirit.

OBSERVATION THRESHOLD	UNLOCKED UPGRADE	INITIAL FORM COST	SAIKYŌ COST
d20+d4	Superior Anticipation	2 PIP	2 PIP
d20+d8	Extended Brief Foresight	2 PIP	3 PIP
d20+d12	Offensive Anticipation	2 PIP	3 PIP

20.3 SUPERIOR ANTICIPATION

Evolves: Anticipation. Unlock: Observation d20+d4. Cost: 2 Observation PIP. Activation: one Bonus Action, with Observation already active.

You prepare a reading of the opponent's next movement. Until the start of your next turn, you may add three full Observation Haki rolls to a single compatible defensive roll made for a Dodge or an Active Defence performed with an attack Technique.

With Observation d20+d8, add three separate d20+d8 rolls. At Saikyō there are still three rolls, each of d20+d20, and cost remains 2 PIP. Growth comes from the Colour's full die.

You must declare use on the chosen roll before rolling. The defence consumes the Reaction and other required resources normally, including Technique costs. Superior

Anticipation grants no additional Reactions, does not increase damage and does not allow damage in response without a specific ability such as Counterblow: this deals the normal Damage Die only if the defence exceeds the opponent's roll; a tie defends but does not deal that damage.

The base version remains available at 1 PIP, with its two Observation rolls. Base and Superior do not stack on the same roll.

20.4 EXTENDED BRIEF FORESIGHT

Evolves: Brief Foresight. Unlock: Observation d20+d8. Activation: one Bonus Action, with Observation already active.

By paying 2 Observation PIP, you extend Brief Foresight for 2 turns. During its duration you retain its ordinary protection: normal physical attacks cannot hit you. Attacks with Haki and area effects remain effective and are resolved normally.

At Saikyō, you may pay 3 PIP for a duration of 3 turns. The type of protection does not expand: duration grows, while Haki and area effects remain able to reach you.

The ability does not make you immune to falls, collapses, conditions or other hazards outside the protection described. It ends if Observation is interrupted. The base version remains available at 2 PIP for 1 turn.

20.5 OFFENSIVE ANTICIPATION

Unlock: Observation d20+d12. Activation: one Bonus Action, before one of your physical attacks and with Observation already active.

By paying 2 Observation PIP, you add two full Observation Haki rolls to the attack roll of a single physical attack of yours. You read the opponent's opening and choose the exact moment to attack.

At Saikyō, you may pay 3 PIP to add three full Observation rolls to the same attack roll.

The bonus modifies only attack precision: it does not add damage or guarantee a hit. Normal defences remain available. Any Clean Hit still depends on ordinary rules and the margin actually achieved.

The attack requires its own Action and any Technique costs. An effect with several separate attacks benefits from the bonus only on the chosen attack. Offensive Anticipation grants no supplementary attacks and does not stack with defensive Anticipation on the same roll.

20.6 RETAINED ORDINARY EFFECTS

Observation Haki's passives remain those of the rules. Nakama Guidance and Future Foresight retain only their ordinary form: they receive no Prestige upgrades in this document.

No telepathy, shared foresight or new abilities to convey perceptions to allies are added. Base Future Foresight retains its own cost of 3 PIP and duration of 2 turns, with no new use limits introduced by Prestige.

CHAPTER 21

CONQUEROR'S PRESTIGE

21.1 CONQUEROR'S PRESTIGE

21.2 ACCESS DECIDED BY THE GM

Conqueror's has exactly three Prestige stages: I, II and Saikyō. Access is decided by the GM based on the character's story and mastery achieved. No dice or Spirit thresholds are required.

Conqueror's gains no die, and its maximum pool remains 3 PIP. The ordinary passives of Awakening, Dominion and Absolute remain those already provided.

CONQUEROR'S PRESTIGE	UPGRADE	COST	IMPERIAL PRESSURE REACH
I	Imperial Pressure	2 PIP	100 m
II	Sovereign Impact	3 PIP	500 m
Saikyō	Unreadable Will	3 PIP in total for the evolved Coating	1,000 m

Prestige II retains Imperial Pressure and expands its reach. Saikyō retains both previous upgrades, brings Imperial Pressure to 1,000 m and completes the evolution of Conqueror's Coating.

21.3 PRESTIGE I: IMPERIAL PRESSURE

Evolves: Emperor's Shout. Cost: 2 Conqueror's PIP. Activation: one Bonus Action, with Conqueror's already active. Limit: once per combat.

You focus your Haki pressure on an enemy you perceive within the available reach. The target can also be a boss. The ability deals no direct damage.

The target loses their next Action. They also interrupt all their active Haki Colours, including ongoing effects, and Techniques they are maintaining. They cannot reactivate those Colours until the end of their second turn subsequent to application.

ACQUIRED CONQUEROR'S PRESTIGE	MAXIMUM REACH
I	100 m
II	500 m
Saikyō	1,000 m

Reach indicates how far you can reach the single target. It is not a radius involving all enemies. You must actually perceive them through sight or another perception already available to the character. Imperial Pressure does not automatically reveal an unknown enemy's position.

The loss concerns one Action: it does not automatically cancel the entire turn, Movement, Bonus Action or Reactions. Innate abilities and powers that are not maintained follow their own rules; the effect does not indiscriminately cancel Devil Fruits or racial traits.

No fear or Spirit roll to resist is introduced: the Shout's effect retains its nature. Indomitable Will does not create a check that the effect does not provide.

Imperial Pressure and base Emperor's Shout share the same use per combat. You may choose the base Shout at 1 PIP, but after using either form you cannot use the other in the same combat. Resurgence of Will recovers PIP and does not restore this use.

Duration example: you hit an enemy before their turn. On the first subsequent turn, they lose the Action and cannot reactivate interrupted Colours. On the second subsequent turn, they retain their Action, but the Haki block remains until the end of that turn. From the third they can activate them again, paying ordinary costs.

21.4 PRESTIGE II: SOVEREIGN IMPACT

Evolves: Conqueror's Coating. Cost: 3 Conqueror's PIP. Activation: one Bonus Action, before one of your physical attacks and with Conqueror's already active.

Choose a single physical attack. The Damage Dice specified for that attack automatically take their maximum result, as in ordinary Coating. With Sovereign Impact, then double the total of those maximised Damage Dice.

If the attack has 3d20 Damage Dice, their maximum is 60, and Sovereign Impact brings this component to 120. Then add the attack's other components according to their respective rules.

Attribute, Skill and Haki rolls and fixed bonuses are not automatically maximised or doubled. No new Spirit roll is added to damage solely because Conqueror's is possessed.

The attack roll remains necessary. Passive Defence, Active Defence and Damage Reduction continue to function normally. The attack requires its own Action and any Technique costs. The effect applies only to the chosen attack, even if the ability used provides a Flurry or several separate attacks.

Base Conqueror's Coating remains available at 2 PIP and maximises DD without doubling them. Sovereign Impact's cost of 3 PIP replaces the base cost: you do not pay 2 PIP plus 3 PIP.

21.5 SAIKYŌ: UNREADABLE WILL

Completes: the same Conqueror's Coating evolved by Sovereign Impact. Cost: still 3 Conqueror's PIP in total. Activation: the same Bonus Action preparing the single attack.

When you use the evolved Coating, you retain Sovereign Impact's maximised and doubled Damage Dice. In addition, the target cannot apply Observation Haki's active defensive benefits against that attack.

Anticipation and Superior Anticipation do not add dice to defence against that blow. Future Foresight does not allow it to be automatically dodged. The same exclusion applies to other active Observation defensive benefits relevant to that attack.

The target can still use Dodge, Parry and other compatible physical defences, with their own rolls and resources. The blow is not automatic. Observation perception passives remain, and the target's active effects continue to apply against other attacks if they are not interrupted by a separate rule.

Unreadable Will does not permanently turn off Observation and is not a passive always present on your attacks: it applies only to the single coated attack for which you paid the cost.

You do not pay for two separate effects. At Saikyō, a single Bonus Action and 3 PIP in total produce Coating with both benefits: maximised and doubled DD, plus exclusion of active Observation defensive anticipation against that blow.

CHAPTER 22

HAKI AND SPIRIT AT THE TABLE

22.1 USE AT THE TABLE

22.2 RESOLUTION ORDER

1. Check the required Colour, its active state, acquired Prestige and available PIP. For Conqueror's, check the Prestige assigned by the GM.
2. On your turn, declare the effect, spend the Bonus Action and pay the cost from the correct pool. Specify the attack or defence it will apply to, where required.
3. Resolve the necessary Action or Reaction, including normal Technique expenditure. Make attack rolls and defences; a tie in Active Defence favours the defender.
4. Calculate damage components and apply only the modifications provided by the effect. Resolve any secondary targets separately, then apply the relevant reductions.
5. Record effect expiry, limited uses consumed and remaining pools. Maintain each Colour according to its ordinary rules.

22.3

RECOVERING CONQUEROR'S PIP BEFORE AN IMPACT

You have 3 Conqueror's PIP and activate it: spend the Bonus Action and 1 PIP, leaving 2. On a later turn you may use Resurgence of Will, assigning at least 1 PIP to Conqueror's to return to 3, within the amount recoverable with Spirit.

On a further turn, with Conqueror's still active, you may spend 3 PIP and the Bonus Action for Sovereign Impact. If you have Conqueror's Saikyō, the same payment also includes Unreadable Will. Resurgence and Coating each require their own Bonus Action, so cannot be performed together on the same turn.

22.4 RYOU AND A ROLE TALENT

With Armament d20+d12 already active, spend 4 PIP and the Bonus Action for Persistent Ryou. Choose your physical attack for the turn and resolve it with Ryou according to ordinary rules.

On the next turn Ryou is still active and can accompany another physical attack. You may use the Bonus Action for a compatible Role Talent, paying its costs and respecting its conditions. At the start of the second turn after activation, Persistent Ryou ends.

22.5

PRESSURE AND COATING ARE TWO SEPARATE CHOICES

Imperial Pressure uses the Bonus Action to interrupt and block a target's Haki at range. Sovereign Impact and Unreadable Will use the Bonus Action to prepare your coated attack. Both cannot be declared on the same turn with the normal availability of one Bonus Action.

Pressure's block remains valid for its duration even if you choose another effect on a later turn. Unreadable Will instead excludes active Observation defence only against the single coated attack.

22.6 QUICK COST TABLE

The active Colour effects listed below require the Colour to be already active and their own Bonus Action. Spirit upgrades follow the conditions specified in their descriptions. Base forms remain available at ordinary costs.

PATH	ABILITY	COST IN PRESTIGE	SAIKYŌ COST	DURATION OR LIMIT
Spirit	Indomitable Will	None	None	Passive on relevant rolls
Spirit	Colour Attunement	1 PIP per Colour	1 PIP per Colour	Activates 2 Colours or 3 at Saikyō
Spirit	Resurgence of Will	0 Stamina	0 Stamina	One use between two Short or Long Rests
Armament	Superior Full Armour	2 PIP	3 PIP	1 turn or 2 at Saikyō
Armament	Superior Haki Burst	2 PIP	3 PIP	One attack with burst
Armament	Persistent Ryou	4 PIP	5 PIP	2 turns or 3 at Saikyō
Observation	Superior Anticipation	2 PIP	2 PIP	One defence by the next turn
Observation	Extended Brief Foresight	2 PIP	3 PIP	2 turns or 3 at Saikyō
Observation	Offensive Anticipation	2 PIP	3 PIP	One physical attack
Conqueror's	Imperial Pressure	2 PIP	2 PIP	Once per combat
Conqueror's	Sovereign Impact	3 PIP	Included in the 3 PIP Coating	One physical attack
Conqueror's	Unreadable Will	Available at Conqueror's Saikyō	Included in the 3 PIP Coating	The same attack as Sovereign Impact

References to Saikyō in the Spirit, Armament and Observation rows concern the d20+d20 die of the corresponding path. In the Conqueror's rows they concern exclusively its third Prestige stage assigned by the GM.

22.7

INTERACTION WITH TECHNIQUES, TALENTS AND ULTIMATE

These upgrades modify the use of Spirit and active Haki effects. They do not automatically grant a Technique, new Role Talent, new Colour or innate Conqueror's ability.

Techniques retain ordinary reach, targets, slots and costs, unless a modification is expressly described by the effect used. Role Skill Prestige Talents and benefits of other Attributes remain in their respective paths.

No Prestige evolution of Ultimates is introduced for any Role. Their operation and requirements remain those already defined.
