16.8 Recording growth
16.9 Unique Traits and Synergies

CHAPTER 1 ·

WELCOME TO THE GRAND LINE

1.1 · WHAT IS GRAND LINE CHRONICLES?

Grand Line Chronicles is a tabletop roleplaying game inspired by the world of *One Piece*, designed to let every player create their own pirate, join a crew and experience an adventure built together with the other players.

Every character begins as more than a simple combination of statistics. They have an **Ambition**, an origin, a Race, particular abilities, a role within the crew and their own way of facing the world. Some fight on the front line, some helm the ship, some cook, some treat the wounded, some build machinery, and some interpret traces of the past. The crew works because each person brings something the others lack.

One participant takes on the role of **Game Master**. The GM describes the world, portrays the characters encountered during the voyage, presents dangers, islands, opponents and opportunities, and determines the consequences of players' actions when the rules require a decision.

There is no predetermined path to follow. Players declare what their characters want to do, the Game Master describes what happens and, when the outcome of an

action is uncertain, the dice come into play.

The rules of Grand Line Chronicles therefore answer a simple question:

“What happens when we do not already know how things will turn out?”

Fighting an opponent, performing an impossible manoeuvre during a storm, administering desperate treatment, building a weapon, preparing a banquet or trying to cross an unknown island can all become moments in which the character's abilities and the dice roll determine the outcome.

Grand Line Chronicles does not, however, separate the character from crew life. The game also includes what happens **between battles**: managing the ship, the Galley, the Workshop, the market, resources collected during the voyage and the growth of the different crew members.

Characters do not grow only by becoming stronger in combat. They can become better navigators, cooks capable of supporting the whole crew, Engineers capable of building and maintaining tools, machinery and structures, or fighters capable of developing ever more extraordinary Techniques, Haki and abilities.

At the heart of the game, however, is the **crew**.

A single character can be exceptional. A complete crew can cross the Grand Line.

1.2 · HOW TO PLAY

A game of **Grand Line Chronicles** begins with a conversation.

The Game Master describes a situation, players decide how their characters react, and the world responds to their actions. As long as what happens is clear, there is no need to interrupt the story with a die roll.

A pirate opens an unlocked door? They open it.

The cook prepares a simple dinner with ordinary ingredients and all the time they need? There is no need to test their ability.

The navigator consults a familiar route in calm conditions? The voyage can simply continue.

Dice come into play when an action's outcome is **uncertain**, when there is a real possibility of failure or when the result can have significant consequences.

The basic cycle of play is therefore:

The GM describes the situation → the player declares what they want to do → decide whether a roll is needed → apply the abilities involved → roll the dice → the result changes the situation.

From that point, play continues from the new reality created by the outcome.

If a pirate tries to leap from one ship to another during a storm, the roll does more than determine whether they “succeed” or “fail”. The result can determine **how** they succeed, which position they reach, which risk they avoid or which problem arises from the attempt.

Likewise, in combat, an attack is not an isolated event. Its result can deal damage, move an enemy, apply a condition, activate a Talent, prepare a subsequent attack or completely change the combatants' positions.

The rules turn these consequences into something clear and shared.

WHEN NOT TO ROLL

Not every action requires a check.

If there is no real uncertainty, the GM can simply describe the result.

A roll should be used when at least one possible consequence is significant. Failure must be capable of changing something.

This prevents the game from becoming an endless sequence of dice rolls and keeps attention on the moments that truly matter.

Even a highly experienced character can face a situation difficult enough to require a check. Likewise, a simple situation may not require one at all, regardless of the values of their characteristics.

DECLARING AN ACTION

When a player wants to do something, they should first describe **the character's intention**, rather than choosing a rule directly.

"I want to run along the parapet and reach the Marine before they close the gate."

is different from:

"I roll Acrobatics."

The first declaration tells the table what the character is actually trying to do. Only then do you determine which Attribute, Skill, Technique or other ability best represents that action.

This lets the same system handle very different situations without turning every scene into a list of buttons to press.

THE CHARACTER'S ABILITIES

Every pirate has various tools for dealing with what they encounter.

Attributes and **Skills** represent their general abilities.

Race, **Roles** and **Talents** define more specific characteristics.

Techniques represent particular actions developed by the character.

Weapons, Haki, Devil Fruits, equipment and other abilities can further modify what they can do.

Not all of these components contribute to the same roll. The rules in subsequent chapters explain when and how they can be used.

THE RESULT MUST CHANGE SOMETHING

After a roll, the game should not return to exactly where it began.

A success allows the character to obtain what they sought or move closer to their goal.

A failure introduces a consequence, a cost or a new difficulty, or leaves room for the opponent's response.

The same principle holds in combat: each action progressively changes the battle by consuming resources, causing damage, changing positions or creating opportunities.

The die does not narrate the scene in the players' place.

It decides where the story must take a direction.

1.3 ·

THE ROLE OF PLAYERS AND THE GAME MASTER

In **Grand Line Chronicles**, everyone helps build the story, but not everyone has the same task.

The **players** portray the crew members.

The **Game Master** portrays the rest of the world.

This simple division supports the entire game.

THE PLAYERS

Each player controls their own character.

They decide:

- what they think;
- what they say;
- what they try to do;
- how they react to events;
- which abilities to use;
- which resources to spend;
- which risks to accept.

The character belongs to the player.

The Game Master can describe what they perceive, what they suffer and the consequences of their actions, but should not decide for the player what they think, feel or choose to do.

A defeat can force a pirate to the ground.

An enemy ability can prevent them from moving.

A situation can make it impossible for them to reach an objective.

But as long as the character retains the ability to choose, that choice remains in the player's hands.

THE CREW

Grand Line Chronicles is built around different characters sharing the same adventure.

Not everyone needs to be an excellent fighter.

A character can stand out because they know how to navigate, build, heal, cook, interpret ancient evidence or hold the crew together in its darkest moments.

This means the game should not always revolve around the same type of check.

A good adventure alternates situations in which different crew members can make the difference.

During a storm, the Navigator might guide everyone.

After a battle, the Doctor might prevent the consequences from becoming permanent.

A seemingly useless object might become valuable in an Engineer's hands.

An incomprehensible inscription might change the meaning of an entire island thanks to the Archaeologist.

In combat, the same logic still applies: different characters face the battle with different tools.

The crew is not a collection of sheets.

It is a crew.

THE GAME MASTER

The Game Master is the voice of the world.

They describe places, people, dangers, creatures and consequences.

They portray:

- allies;
- enemies;
- Marines;
- rival pirates;
- island inhabitants;
- animals and creatures;
- organisations;
- everything that does not belong directly to the players.

They are also responsible for presenting situations that require decisions.

They do not determine how the story will end.

They must create something the players can react to.

An island can have an ongoing conflict.

An antagonist can have a plan.

A storm can be approaching.

A rival crew can be seeking the same treasure.

But what happens depends on what the characters do.

THE GM AS REFEREE

When a situation is clearly covered by the rules, the Game Master applies them.

When something arises that the system does not describe exactly, the GM decides how to represent it using the existing rules.

They can determine:

- whether a roll is needed;
- which ability is most appropriate;
- which difficulty represents the situation;
- what consequences a failure brings;
- how to interpret an unusual circumstance.

This authority does not exist to set the Game Master against the players.

It lets the game continue even when someone tries something that no manual could anticipate.

THE GM DOES NOT PLAY AGAINST THE CREW

The Game Master controls the opponents, but this does not mean their objective is to defeat the players.

An enemy may want to win.

The GM does not.

Their task is to have that enemy act consistently with who they are.

A proud fighter might accept a head-on confrontation.

A sniper might avoid any close confrontation.

An officer might order a retreat if the situation becomes desperate.

A hungry creature might stop fighting as soon as it finds something more interesting to devour.

Opponents have objectives.

The Game Master portrays them.

INFORMATION AND KNOWLEDGE

Player and character do not always have the same information.

A player might immediately realise that a particular creature is dangerous.

Their character might never have seen it.

Likewise, the Game Master knows what is behind a door, but the inhabitants of the world do not necessarily know.

Separating what **the player knows** from what **the character knows** helps keep the story coherent.

When there is doubt, the GM can ask for an appropriate check to determine how much the character actually knows.

RULES AND FICTION

The rules represent what happens in the world.

They are not two separate layers.

If a Technique pushes an opponent three metres, that enemy is actually hurled backwards in the story.

If a character runs out of Stamina, that expenditure represents exertion with concrete consequences.

If the ship takes damage, that damage exists in the world and can require repairs.

For this reason, a good description must not contradict the result of the rules.

It must turn that result into something the table can imagine.

A SHARED RESPONSIBILITY

The Game Master builds the world.

The players give it direction.

The rules determine what happens when neither can simply decide the outcome.

When these three elements work together, the game ceases to be a story told to a group of people.

It becomes a story that **nobody at the table could have written alone**.

1.4 · THE WILL OF D. SYSTEM

The mechanical heart of **Grand Line Chronicles** is the **Will of D. System**.

Whenever an action's outcome is uncertain, the game translates the character's ability, experience and specialisation into dice.

The fundamental scale is:

$d_4 \rightarrow d_6 \rightarrow d_8 \rightarrow d_{10} \rightarrow d_{12} \rightarrow d_{20}$

It does not merely represent higher probabilities. Above all, it represents **how competent a character is at something**.

A pirate with a low value can still try a difficult action. A character with a high value, however, faces that same situation with better tools and a much more concrete chance of prevailing.

The system therefore does not use large quantities of numerical modifiers that must constantly be added together. The main form of growth directly advances the **die** associated with an ability.

GRADES

Each step on the scale represents a different level of competence.

d4 · Basic
The character has elementary knowledge or an ability that is still underdeveloped.

d6 · Competent
They can use that ability reliably in ordinary situations.

d8 · Expert
They have developed a genuine specialisation.

d10 · Master
The ability has become one of their main strengths.

d12 · Legend
Very few individuals reach this level.

d20 · Mythic
This represents abilities beyond the normal scale, worthy of the Grand Line's most extraordinary characters.

These Grades appear in almost every part of the game.

Attributes, Skills, Techniques, weapons, Haki, Devil Fruits and numerous other systems use the same scale.

The player therefore needs to learn just one mathematical language, which they will encounter everywhere.

BUILDING A ROLL

A check can use several dice when different abilities contribute to the same action.

For example, a character might tackle a situation using an **Attribute** together with an appropriate **Skill**.

In combat, a Technique can become part of the roll.

A weapon can use its own Grade.

Other systems can add dice or modify how they are rolled.

The exact composition depends on the situation and is explained in the relevant chapters.

The principle, however, always remains the same:

each die must represent something the character is actually using.

You do not add a die because "a bonus is needed".

You add it because a concrete ability contributes to the action.

ADDITIONAL DICE WITH NO SPECIFIED TYPE

When a rule grants +1 die or several additional dice without specifying their type, use the die that serves as the main reference for the action or effect.

In a normal Check based on Attribute + Skill, the reference die is normally the Attribute unless the ability states otherwise.

If, instead, the action or effect explicitly uses a Skill, Weapon Grade, Technique Die, Damage Die, Fruit Die, Haki Die or another specific die as its reference, the additional die is a new copy of that die.

A generic +1 die does not mean repeating the entire pool and does not automatically add all the dice making up the action.

Additional dice obtained through Prestige are not duplicated by this rule unless explicitly stated.

DIE REDUCTIONS

When a rule states –1 die, a die is not physically removed from the pool. Instead, the reference die is reduced by one Grade along the normal scale:

d20	→	**d12**
d12	→	**d10**
d10	→	**d8**
d8	→	**d6**
d6	→	**d4**

The d4 is the minimum limit and cannot be reduced further by a normal Grade reduction.

If a formula uses several copies of the same reference die, the reduction changes the Grade of that reference. For example, 3 d10 Weapon Dice become 3d8.

The reduction lasts for the period indicated by the effect causing it.

THE DIE REPRESENTS COMPETENCE

Imagine two pirates trying to reach the top of a tower.

The first is strong but has little training in acrobatic movement.

The second has exceptional control of their body.

They might attempt the same action, but not necessarily using the same tools.

One might rely on the strength of their arms.

The other might exploit balance and technique.

The system therefore does not seek to impose a single correct solution.

It seeks to represent **how** the character approaches the problem.

This distinction becomes even more important when Roles, Talents and Techniques come into play.

Two characters with similar values can behave completely differently because they have developed different abilities.

OVERCOMING A DIFFICULTY

When a check is not directly opposed by another character, the Game Master can set a **Threshold**.

The roll's result is compared with that difficulty.

A simple situation requires a relatively low Threshold.

A risky feat requires a higher Threshold.

Extraordinary actions can require equally extraordinary abilities.

The Threshold does not represent how much the Game Master wants the character to fail.

It represents how difficult the attempted action is.

OPPOSED CHECKS

When two characters act directly against one another, both can take part in the resolution.

A pirate tries to grab someone who wants to break free.

Two fighters try to act before each other.

A character tries to deceive someone who is trying to understand their intentions.

In these situations, the difficulty is not necessarily fixed.

There is **another will on the other side of the roll**.

The specific rules establish which dice are used and how the winner of the contest is determined.

Combat uses this same philosophy, but with more precise procedures.

SAVES

A Save represents an attempt to resist, avoid or escape an effect. When the ability specifies which Attribute to use, use that Attribute; otherwise the Game Master chooses the most appropriate one.

The Condition establishes the Save's Attribute; the source establishes the Threshold. When the effect comes from a source with a Grade, the source does not roll dice: its Grade determines a fixed Threshold. The target rolls only their complete Attribute, including any Prestige die, and succeeds if the result meets or exceeds the Threshold.

SOURCE GRADE	THRESHOLD
d4	3
d6	4
d8	5
d10	6
d12	7
d20	11

SAVES AND PRESTIGE

A source that has reached Prestige uses its complete Grade to determine the fixed Threshold. Prestige progression and rules are described in the Prestige Manual.

SOURCE GRADE	THRESHOLD
d20+d4 · Prestige I	13
d20+d6 · Prestige II	14
d20+d8 · Prestige III	15
d20+d10 · Prestige IV	16
d20+d12 · Prestige V	17
d20+d20 · Saikyō	21

DETERMINING THE SOURCE

SOURCE	GRADE USED FOR THE THRESHOLD
Effect included in a Technique	Grade of the Technique containing the effect.
Racial Technique	Current Grade of the Racial Technique.
Talent or Signature that directly applies a Condition	Current Grade of the Skill governing the Talent or Signature, unless specifically stated otherwise; at Prestige, use the complete Skill pool.
Fruit effect not included in a Technique	Fruit Die. An effect included in a Fruit Technique instead uses the Technique's Grade.
Direct Haki effect	Grade of the Colour producing the effect, when that Colour has a Grade.
Special weapon effect	The weapon's actually usable Grade, unless the effect has its own Threshold.
Musician Song	The instrument's actually usable Grade, unless a specific Prestige evolution applies.
Item, preparation, poison or device with its own Threshold	Threshold written on the sheet: the specific rule takes precedence.
Environmental effect without a Grade	Threshold set by the rule or by the Game Master before the roll.

The source Grade cannot be freely chosen from the character's statistics: use the component that mechanically contains or generates the Condition. If a specific rule indicates a different source, that rule takes precedence.

When a Signature or Talent has a specific rule identifying the Technique that generated the effect as its source, that specific rule takes precedence. Breakthrough Strike therefore uses the Role Skill on basic attacks and the Technique Grade when triggered by a Striker Technique.

An effect's own Threshold, an opposed check or a specific procedure takes precedence over the general table. Poisons, substances, physical restraints and environmental conditions retain their sheet's procedure or the one established by the Game Master before the roll.

If an effect grants a Save without specifying its timing, the first Save is made when the Condition is applied. If the Condition persists, the target can repeat it at the end of each of their turns, unless stated otherwise. The Threshold remains the one determined by the original source for as long as that specific effect continues to cause the Condition. New applications follow the normal rules for repeated Conditions and durations (§6.13).

MARGIN MATTERS

In Grand Line Chronicles, success or failure is not the only thing that matters.

In many situations, **how far** the result exceeds the required value also matters.

A narrow victory and an overwhelming victory need not produce the same result.

This difference is called the **Margin**.

The Margin can trigger additional effects, special abilities or better results.

It is particularly important in combat, because some abilities respond directly to the quality of the hit.

ADVANTAGE AND DISADVANTAGE

Some situations can make an action especially favourable or especially difficult.

The system uses **Advantage** and **Disadvantage** to represent these conditions without turning them into a cascade of small modifiers.

Position, Talents, preparation, battlefield conditions and other abilities can grant them.

They do not simply mean that a character "is stronger".

They mean that, **at that precise moment**, circumstances are working in their favour or against them.

The detailed rules for rolling and combining them are described in the chapter on the fundamental rules.

RESOLVING ADVANTAGE AND DISADVANTAGE

Advantage and Disadvantage apply to the entire dice pool of the roll indicated by the effect.

With Advantage, build the complete pool normally, roll it twice and keep the higher total.

With Disadvantage, build the complete pool normally, roll it twice and keep the lower total.

You therefore do not reroll a single die in the pool: the entire roll is repeated.

Multiple sources of Advantage do not produce further rolls. Likewise, multiple sources of Disadvantage do not stack.

If the same roll has both Advantage and Disadvantage, the two effects cancel each other out and the roll is made normally.

ONE SCALE, MANY SYSTEMS

The strength of the Will of D. System lies in its continuity.

The same language that describes a Skill also describes a Technique, a weapon, Haki or a Fruit's power.

When a character grows, they do not suddenly enter a second game system.

They continue using the same dice, but combine them in increasingly sophisticated ways.

A new player can therefore begin by learning something very simple:

the larger the die, the higher the level of the ability it represents.

Everything else starts there.

1.5 · DICE AND GRADES

Grand Line Chronicles uses a single scale to represent how developed an ability is:

d4 → d6 → d8 → d10 → d12 → d20

Each die corresponds to a **Grade**.

DIE	GRADE	MEANING
d4	**Basic**	Knowledge or ability that is still elementary
d6	**Competent**	Enough proficiency to use the ability confidently
d8	**Expert**	A clearly established specialisation
d10	**Master**	An ability refined to an exceptional level
d12	**Legend**	A level reached by very few
d20	**Mythic**	An ability beyond the normal scale, belonging to the most extraordinary figures

The die and Grade therefore indicate the same position in the progression.

Writing **d10 Technique** means that the Technique is of **Master** Grade.

A **d12** weapon is a **Legend** Grade weapon.

A **d20** Attribute has reached **Mythic** Grade.

This language is used throughout the game.

READING A DIE

The letter **d** simply means *die*.

The number indicates how many sides it has.

d4 therefore means a four-sided die.

d10 is a ten-sided die.

d20 is a twenty-sided die.

When a rule asks you to roll several dice, they are written alongside one another or with the number of copies of the same die that must be rolled.

For example:

d20 + d12

means rolling one twenty-sided die and one twelve-sided die and adding their results.

3d8

means rolling three eight-sided dice.

How these dice are obtained depends on the rule resolving the action.

GRADE IS NOT A CHARACTER LEVEL

A character is not simply "d10 level".

Each of their components can be at a different Grade.

A pirate might have:

- d12 Strength;
- d20 Technique;
- a d10 Skill;
- a d12 weapon;
- d8 Armament Haki;
- a d20 Technique.

This allows strongly specialised characters without forcing every ability to grow at the same time.

A great swordsman can be mediocre at Medicine.

An exceptional Navigator can have modest combat abilities.

A pirate can reach extraordinary levels with their Haki without being equally developed in every other field.

The sheet therefore shows **where the character's strength lies**, rather than just how powerful they are overall.

ADVANCING A GRADE

Progression always follows the same order:

d4 → d6 → d8 → d10 → d12 → d20

When an ability increases by **one Grade**, it moves to the next die on the scale.

For example:

d8 → d10

or:

d12 → d20

There are no intermediate Grades between these values.

The move from d12 to d20 is therefore a single advancement on the system's scale, even though the die's numerical size increases much more than the others.

This jump deliberately represents the transition from **Legend** to **Mythic**.

THE D20 IS NOT SIMPLY "A LARGER DIE"

The first five Grades describe progressive growth.

The **d20**, however, represents entry into the system's most extreme tier.

This is where abilities begin appearing for characters who can radically change a battle's outcome, dominate entire situations or use the most advanced forms of their powers.

For this reason, many parts of Grand Line Chronicles reserve specific effects, Talents or abilities for d20 Grade.

Reaching d20 does not, however, mean automatically becoming unbeatable.

A character still depends on:

- which abilities they have actually developed;
- which resources they have;
- which Talents they have chosen;
- how they use their Techniques;
- which tools they have available;
- what their opponent is doing.

Grade measures the power of a component.

It does not determine the scene's outcome on its own.

GRADES AND REQUIREMENTS

In some parts of the game, Grade does more than determine which die to roll.

It can also represent a **requirement**.

A weapon can require that the Attribute used has reached a certain Grade.

A Talent can become available only from a certain tier.

An ability can unlock when Haki, a Fruit or another characteristic reaches a precise step.

In these cases, the die also measures the preparation needed to use something correctly.

Individual sections of the manual always indicate when such a requirement exists.

A COMMON SCALE

Using the same progression in different systems makes a sheet quick to read.

If you see:

d6, you know that the ability is still relatively limited.

If you see:

d12, you know that you are facing something exceptional.

If you see:

d20, that component has entered the Mythic tier.

This applies whether you are discussing an Attribute, a Skill, a Technique, a weapon, Haki or another system that uses Grades.

It is one of the fundamental principles of Grand Line Chronicles:

learn a scale once, then encounter it throughout the game.

1.6 · THE GOLDEN RULE

Grand Line Chronicles provides rules for resolving actions, combat, abilities, Techniques, Haki, equipment and most situations that can arise during a session.

But no ruleset can anticipate every idea that will emerge at the table.

Sooner or later, someone will try something that is not written in any table.

When this happens, the **Golden Rule** comes into play:

if a situation is not clearly covered by the rules, use the simplest solution consistent with what is happening in the scene.

The aim is not to find the perfect rule.

It is to let play continue without breaking the pace.

THE SITUATION FIRST, THEN THE RULE

When a player describes an action, the table should start from what the character is actually trying to do.

Only then should you look for the most appropriate mechanic.

If a rule already exists and clearly describes that situation, use it.

If several rules seem applicable, choose the one that best represents the action.

If no rule fits, the Game Master can build a resolution using the system's fundamental tools:

- Attributes;
- Skills;
- Thresholds;
- opposed checks;
- Advantage and Disadvantage;
- resources;
- narrative consequences.

The solution should be simple enough to explain to the table in a few seconds.

DO NOT ADD COMPLEXITY WITHOUT REASON

When a new situation arises, the response should not be to immediately create a new subrule.

If a problem can be resolved with a normal check, that is often the best solution.

If it can be represented with Advantage or Disadvantage, you do not necessarily need to invent a modifier.

If an existing ability already describes something very similar, it can be used as a reference.

The system must support the scene, not slow it down.

CONSISTENCY MATTERS

The Golden Rule does not mean identical situations should be resolved completely differently every time.

When the table makes a decision about an unanticipated situation, it is useful to remember it and apply the same logic when that circumstance arises again.

This creates natural continuity.

Players gradually learn how the world works and can make decisions knowing what to expect.

THE GM DOES NOT CHANGE A RULE MID-ACTION

When an ability has a clear rule, that rule should be known before the player decides to use it.

Changing how a Technique, Talent or other ability works after the player has already spent a resource makes informed decisions difficult.

If a problem emerges during the session, the GM can make a temporary decision to keep the scene moving.

The issue can then be discussed at the end of the session and, if necessary, clarified for future games.

ABILITIES DO WHAT THEY SAY

When a rule describes a precise effect, there is no need to search for hidden meanings.

If a Technique pushes a target 3 metres, it pushes them 3 metres.

If a Talent triggers once per turn, it cannot trigger a second time in the same turn unless another rule explicitly allows it.

If an ability requires a condition, that condition must be met.

This principle lets combinations of abilities work without every interaction needing to be individually rewritten.

Exceptions must be stated.

SPECIFIC RULES TAKE PRECEDENCE OVER GENERAL RULES

Grand Line Chronicles uses many abilities that modify the normal rules.

When a specific rule contradicts a general rule, the specific rule takes precedence.

For example, if a particular action normally requires a Reaction but a Talent explicitly says it can be performed without spending one, apply the Talent.

If an ability allows you to ignore a defence that would normally apply, that ability is an exception to the general rule.

This hierarchy avoids having to repeat all the rules modified by an ability every time.

WHEN IN DOUBT

When a situation remains ambiguous even after consulting the rules, the GM makes a decision for that scene.

The decision should respect three principles:

Consistency
The solution must make sense in relation to the situation and the existing rules.

Simplicity
It must be quick enough not to stall the session.

Transparency
Players must know how it will be resolved before committing significant resources, whenever possible.

The Golden Rule does not replace the ruleset.

It covers the inevitable gap between what the manual can anticipate and what the players can invent.

Because in Grand Line Chronicles, there is always the possibility that someone will try something nobody thought to write down.

And that is usually where the session becomes interesting.

CHAPTER 2 ·

CREATING YOUR PIRATE

Creating a character in **Grand Line Chronicles** means deciding who they are before establishing how strong they are.

The sheet is built in layers. Each choice adds something different: identity, origin, abilities, role in the crew, fighting style and opportunities for growth.

The first step is the most important.

2.1 · AMBITION

Every pirate has a dream.

In **Grand Line Chronicles**, this dream is called **Ambition**.

Ambition represents what drives the character to set sail, cross dangerous seas, face superior opponents and continue moving forward when stopping would be easier.

It can be something enormous:

“I will become the world's greatest swordsman.”

or something deeply personal:

“I will find my brother.”

It can concern freedom, knowledge, revenge, power, discovery, protection, glory, their crew or any other goal important enough to give direction to the character's life.

In the character creator, Ambition is simply:

the dream that drives the pirate.

AMBITION IS NOT A STATISTIC

Ambition has no die and does not automatically grant numerical bonuses.

It does not increase Attributes, Skills, HP or Stamina simply because it is written on the sheet.

Its value comes from **how the character lives it during the adventure**.

An ignored Ambition remains merely a sentence.

An Ambition that influences decisions, risks and sacrifices becomes a concrete part of the game.

ACTING ACCORDING TO YOUR AMBITION

When a character takes an important action guided by their Ambition, the **Game Master can decide to reward them** if they consider the situation narratively consistent and meaningful.

This reward **is not automatic** and follows no fixed formula.

Depending on the situation, the GM can grant:

- a bonus to a check;
- Advantage;
- a resource or recovery;
- an additional reward;
- a narrative opportunity;
- a temporary benefit;
- or any other effect consistent with what is happening.

The aim is not to reward a player every time they mention their Ambition.

The reward should come when the character **truly acts in pursuit of it**, especially when that choice entails a risk, sacrifice or significant consequence.

A character with the Ambition:

“I will build the fastest ship on the Grand Line.”

might decide to face an extremely dangerous area to recover a unique material needed for their project.

If the GM considers that choice an important moment in their journey, they can decide to grant something in return.

Ambition thus becomes a tool through which **narrative and mechanics can meet**.

AMBITION GUIDES THE STORY

Ambition helps the player understand what truly matters to their character.

It also helps the Game Master create situations with personal significance for the crew.

A place, character or object can take on a completely different value when it comes into contact with someone's dream.

For this reason, Ambition can influence:

events, rewards, encounters, opportunities and narrative development.

It does not, however, oblige the Game Master to build the entire campaign around the characters' dreams.

It is a compass, not a rail.

WRITING A GOOD AMBITION

A good Ambition should be clear enough for the table to understand what the character wants.

“I want to become strong” is very generic.

“I want to become strong enough to defeat the man who destroyed my village” immediately creates a direction.

“I want to explore the world” works.

“I will draw a complete map of the Grand Line”, however, offers an even more recognisable objective.

An Ambition does not need to be easy to achieve.

It can drive an entire campaign.

AMBITION AND BACKGROUND

Background tells where the character comes from.

Ambition tells where they want to go.

The two can be directly connected.

Background: grew up in a village destroyed by a storm.

Ambition:
“I will build a ship that can cross any sea.”

Or they can be completely independent.

Background: child of a merchant family.

Ambition:
“I will discover whether an island in the sky really exists.”

Both possibilities are valid.

AMBITION CAN CHANGE

A character can change during the voyage.

They can fulfil their dream, lose it, discover it was not what they truly wanted or find something even more important.

In these cases, Ambition can also evolve.

Achieving it does not necessarily mean abandoning the character.

It can represent the end of one chapter and the beginning of the next.

In Grand Line Chronicles, Ambition does more than explain **why a pirate set sail**.

It reminds you **why they keep sailing**.

2.2 · CREATION PROCEDURE

Creating a pirate in **Grand Line Chronicles** means building them one element at a time, starting with who they are and progressing to what they can do.

The guided creator follows **eight steps**:

Concept → Race → Attributes → Role → Skills → Techniques → Fruit → Save

You do not need to know every rule of the game already. Each step defines a precise part of the character and prepares the next.

STEP 1 · CONCEPT

The narrative foundations come first.

Here you define:

Name
What the character is called.

Background
Where they come from, what happened to them and which events brought them to the start of the adventure.

Ambition
The dream that drives them to continue the voyage.

Name and Background do not automatically assign mechanical bonuses. Ambition, however, can become relevant during the campaign when the character takes meaningful action to pursue it, as described in the preceding section.

This first step answers the question:

Who is your pirate?

STEP 2 · RACE

Race establishes some of the character's physical and innate characteristics.

Each Race can determine elements such as:

- racial Attribute;
- racial die;
- starting HP;
- Hit Die;
- Movement;
- racial Technique;
- special abilities;
- any limitations.

A Human, a Mink, a Giant and a Fish-Man are not simply four different appearances.

They enter the game with different characteristics and interact with the world differently.

The choice of Race does not, however, determine the character's profession or fighting style.

A Fish-Man can be a Cook.

A Giant can be a Navigator.

A Human can become a Striker.

Race and Role are two separate components.

STEP 3 · ATTRIBUTES

Attributes represent the character's fundamental abilities.

They define how developed they are in different areas and contribute to a great many rolls in the system.

During creation, starting dice are assigned to Attributes according to the creator's rules.

Race can influence one of them through its **racial Attribute**.

Attributes do not describe what the character has learnt to do.

They describe the foundation on which those abilities are built.

Great Strength does not automatically make someone an Athletics expert.

A high Technique does not automatically grant every ability requiring precision.

For this reason, Attributes and Skills remain separate.

STEP 4 · ROLE

Role represents what the character brings to the crew.

It can indicate their fighting style, their profession aboard ship or both.

Grand Line Chronicles allows characters with **two Roles**, enabling combinations such as:

- **Fighter + Cook**
- **Navigator + Captain**
- **Doctor + Fighter**

and many others.

Some Roles also have **Styles**.

Fighter, for example, does not on its own describe how the character approaches a battle. Their Style defines their specialisation.

Likewise, other Roles can have different internal paths.

The Role also assigns a **Role Skill**, representing the main competence associated with that profession or specialisation.

Race tells **what you are**.

Role tells **your place in the crew**.

STEP 5 · SKILLS

Skills represent what the character has learnt to do.

Navigation, Athletics, Medicine, Cooking, Acrobatics, Archaeology and the other Skills distinguish characters who might have similar Attributes but completely different experiences.

The Role already provides its characteristic Skill.

During creation, the character's other competencies are then defined according to the options offered by the creator.

When a check uses a Skill, it is normally combined with the appropriate Attribute dictated by the situation.

Attributes therefore represent **basic ability**.

Skills represent **training**.

STEP 6 · TECHNIQUES

Techniques are the character's characteristic actions.

They do not simply represent a stronger attack.

They can be strikes, defensive manoeuvres, movement, enhancements, area abilities or other actions built through the Technique system.

Every character also has their own **racial Technique**, linked to the chosen Race.

During creation, the pirate's first personal Techniques are defined.

They can subsequently be developed, improved and used as the foundation for far more advanced combinations, including **Special Moves**.

Techniques are covered in a dedicated chapter.

STEP 7 · DEVIL FRUIT

A **Devil Fruit is optional**.

Not every character has one, and one is not necessary to reach the highest levels of the game.

If the character has eaten a Fruit, this step defines the information needed for their power.

The Fruit introduces unique possibilities, but also specific weaknesses.

Its presence must also be agreed with the **Game Master**.

A character without a Fruit simply skips this step.

Haki and Fruit do not represent the same form of progression and are explained separately in their respective chapters.

STEP 8 · SAVE

Once the starting choices are complete, the character is saved and becomes a usable sheet.

From this point, they are no longer simply a character being created.

They enter the Grand Line Chronicles management system, where they can grow during the campaign.

Their sheet will progressively collect:

Attributes, Skills, HP, Stamina, Talents, Techniques, weapons, Haki, any Devil Fruit, equipment, Special Moves and all other abilities obtained during the voyage.

Creation therefore establishes **the starting point**, rather than the final character.

STARTING EQUIPMENT

Grand Line Chronicles does not use universal starting equipment.

Berry, weapons, equipment, professional tools, ammunition, materials, medicines and other resources available at creation depend on the campaign.

The Game Master establishes the starting equipment based on the adventure's starting point, the crew's resources and the campaign's tone.

WHAT IS CALCULATED AUTOMATICALLY

Not every value must be chosen manually.

Some statistics derive directly from earlier decisions.

Race, for example, helps define **starting HP, Hit Die and Movement**.

Every pirate also begins with **6 Stamina**.

Other values are determined by the rules associated with Attributes, Race, Roles and owned abilities.

The creator gathers this information in the sheet, allowing the player to focus on the decisions that truly define the character.

2.3 · ATTRIBUTES

Attributes represent the character's fundamental abilities.

There are four in Grand Line Chronicles:

ATTRIBUTE	REPRESENTS	USAGE EXAMPLES
Strength	Physical power, muscles, endurance	Heavy blows, lifting, pushing, taking hits
Technique	Precision, speed, control	Technical strikes, precise movements, refined use of abilities
Spirit	Willpower, presence, inner strength	Haki, resisting fear, asserting yourself over others
Cunning	Ingenuity, planning, adaptability	Navigating, devising solutions, deceiving, planning

Attributes do not represent professions or specific training.

That is why **Skills** exist.

A character can have great Cunning without being an expert Navigator, just as they can have extraordinary Strength without great Athletics.

When an action requires both components, Attribute and Skill can work together.

STRENGTH

Strength represents the character's physical power.

It comes into play when what matters is how much they can push, lift, hit or endure through their body.

It can be used for:

- attacks based on power;
- physical grappling;
- lifting or dragging weights;
- smashing through obstacles;
- resisting through their toughness;
- using weapons or abilities that require great strength.

A character with high Strength is not necessarily slow or lacking technique.

It simply means that, when they choose to rely on physical power, they have a better die.

TECHNIQUE

Technique represents precision, speed and control.

It is used when the outcome depends more on executing a movement correctly than on the force behind it.

It can represent:

- precise attacks;
- combat based on speed and control;
- refined weapon use;
- complex movements;
- abilities requiring coordination;
- Techniques built around precision.

Strength and Technique can therefore achieve the same goal through different approaches.

A fighter can bring down an opponent by overwhelming them with power or striking the exact spot with extreme precision.

SPIRIT

Spirit represents willpower, presence and inner strength.

It is the ability to remain steadfast when the pressure is not merely physical.

It can contribute to situations involving:

- Haki;
- resisting fear;
- intimidation or a commanding presence;
- willpower;
- abilities that depend directly on the character's determination.

Spirit does not measure how good, brave or morally strong a character is.

It measures how well they can impose and maintain their will.

CUNNING

Cunning represents ingenuity, the ability to observe a situation and find a solution.

It can be used when the character needs to:

- plan;
- interpret information;
- find their bearings;
- devise a strategy;
- deceive;
- exploit the environment;
- solve a problem through reasoning.

A character with high Cunning does not automatically know every discipline.

Their specific knowledge still depends on the appropriate Skills.

Cunning represents the ability to make good use of what they know.

ASSIGNING ATTRIBUTES AT CREATION

Race determines the first important value.

Each Race assigns its **Racial Die** to a specific Attribute, or allows a choice among those permitted by the Race.

Once the Racial Die has been assigned, three Attributes remain.

During creation:

one of these is raised to d6;

the other two start at:

d4.

The basic distribution is therefore:

Racial Die + d6 + d4 + d4

For most Races the Racial Die is **d8**, while some can use different values.

The precise value always depends on the chosen Race.

EXAMPLE

A character chooses a Race that grants:

d8 Strength

Technique, Spirit and Cunning remain.

The player chooses:

d6 Technique

The starting sheet is therefore:

ATTRIBUTE	DIE
Strength	**d8**
Technique	**d6**
Spirit	**d4**
Cunning	**d4**

Another character of the same Race could instead choose d6 Spirit and start with a completely different distribution.

Race establishes part of the structure.

The player decides how to build the rest.

RACIAL ATTRIBUTE

The **Racial Attribute** is the Attribute in which the character's nature grants the most significant starting advantage.

It is not necessarily the Attribute they must use throughout the campaign.

A character can freely develop another Attribute over time until it exceeds that one.

The Racial Attribute also determines some interactions with racial characteristics and other derived statistics, which are explained in the appropriate chapters.

ATTRIBUTES CAN GROW

The values assigned during creation are only the starting point.

During the adventure, Attributes can advance along the normal Grade scale:

d4 → d6 → d8 → d10 → d12 → d20

A character can therefore begin with d4 Technique and, over the course of their story, turn it into one of their main characteristics.

Growth is not automatic.

It requires the resources specified by the advancement system.

THE ATTRIBUTE DOES NOT DETERMINE THE ROLL ON ITS OWN

Having a high Attribute does not mean automatically adding it to any vaguely related action.

The die must be consistent with what the character is actually doing.

If a pirate tries to persuade someone with elaborate reasoning, the roll might use different tools from someone seeking the same result by imposing their presence.

The situation determines which Attribute best represents the action.

When a rule explicitly indicates an Attribute, however, use that one.

This is particularly important for **Techniques, weapons and special abilities**, which can have a precise reference Attribute.

ATTRIBUTES AND CHARACTER IDENTITY

The Attribute distribution already begins to show what kind of pirate you are creating.

High Strength suggests someone who faces obstacles head-on.

High Technique favours precision and control.

High Spirit builds a presence that is difficult to break.

High Cunning makes the character especially suited to reading and manipulating situations.

They are not, however, cages.

Two characters with the same Attributes can become completely different once you add **Race, Roles, Skills, Talents and Techniques**.

That is where true specialisation begins.

2.4 · SKILLS

Skills represent what the character has learnt to do.

Attributes describe their fundamental abilities.

Skills instead describe **experience, training and specific competencies**.

When a check requires a Skill, the roll normally uses:

Attribute + Skill

against a Threshold or another roll, depending on the situation.

The Attribute describes **how** the character approaches the problem.

The Skill describes **what they know how to do**.

AVAILABLE SKILLS

Grand Line Chronicles uses these Skills:

SKILL	REPRESENTS
Crafting	Objects and tools
Medicine	Wounds, poisons
Navigation	Routes, voyages
Cooking	Meals, recovery
Stealth	Moving unseen, lockpicking
Athletics	Running, physical exertion, grappling
Archaeology	History, artefacts, Poneglyph
Acrobatics	Balance, agility, evasion
Art	Music, performances, forgeries
Observation	Dangers, details, clues
Mechanics	Machinery, devices, cannons
Carpentry	Ship construction and maintenance
Exploration	Moving and finding your bearings on islands
Communication	Persuading, negotiating, commanding
Nature	Plants, climate, the natural environment
Survival	Food, shelter, enduring hostile environments

A Skill does not necessarily define a single action.

Observation, for example, can identify an ambush, pick out a detail in a scene or notice something others have overlooked.

Mechanics can concern an engine, a cannon or a complex device.

Context determines which Skill is appropriate.

THE ROLE SKILL

Every Role has a **Role Skill**.

During creation, this starts directly at:

d8

and represents the competence in which the character begins as a true specialist.

For example, a Cook uses **Cooking**, a Navigator **Navigation**, and a Doctor **Medicine**.

Some Styles instead allow their Role Skill to be chosen from several options.

The Role Skill is more than a Skill higher than the others.

Its growth is also linked to the development of the **Role and its Talents**.

It therefore represents one of the main axes of character progression.

TWO ROLES, ONLY ONE STARTING ROLE SKILL

A pirate can have two Roles, but at creation receives **only one Role d8**.

The player decides which of the Skills available through their Roles represents their main starting specialisation.

The second Role still remains a full part of the character, allowing access to its abilities and growth path, but does not automatically grant a second free d8.

A **Fighter + Cook**, for example, must decide where their most developed starting competence lies.

They could start with their Fighter Style's Skill at d8 and develop Cooking during the campaign.

Or do the reverse.

ASSIGNING SKILLS AT CREATION

Besides the Role Skill at **d8**, the character chooses:

2 Skills at d6

e:

2 Skills at d4

The starting competence structure is therefore:

QUANTITY	GRADE
1	**d8 · Role Skill**
2	**d6**
2	**d4**

The other Skills do not receive a die during creation.

This does not mean the character is unable to perform any action related to those competencies.

It means that **they do not have a developed Skill to add to the roll**.

When a situation requires specific competencies, the GM establishes whether the action can be attempted without that Skill and under what conditions.

ATTRIBUTE AND SKILL ARE NOT PERMANENTLY LINKED

A Skill does not necessarily belong to only one Attribute.

The combination depends on what the character is actually doing.

A pirate could use:

Cunning + Communication

to build a reasoned negotiation.

In a different situation, they could use:

Spirit + Communication

to assert themselves through presence and determination.

Likewise, Athletics could be associated with Strength in a physical confrontation, while another situation might require a different combination.

When a rule expressly states which Attribute to use, that instruction takes precedence.

CREATION EXAMPLE

A character chooses **Navigator** as their main Role.

Their Role Skill is therefore:

d8 Navigation

They then decide to be particularly attentive and accustomed to life in the wild:

d6 Observation
d6 Survival

Finally, they choose two competencies that are still basic:

d4 Communication
d4 Nature

The character therefore starts as an expert Navigator, with good survival and perception abilities, but still has plenty of room to grow in other fields.

SKILL GROWTH

Skills can advance along the same scale used by the rest of the system:

d4 → d6 → d8 → d10 → d12 → d20

Over time, a secondary competence can therefore become one of the character's main characteristics.

Growth of the **Role Skill** is also particularly important, because it allows access to ever higher tiers of the Role's Talent tree.

The character therefore does not grow merely by increasing their numbers.

By growing in Skills, they become able to do **new things**.

SYNERGIES AND UNIQUE TRAITS

Developing a Skill can create a Synergy with an Attribute. A Synergy is a specific Attribute + Skill pair which, on reaching the required Grades, makes Unique Traits available. A Skill does not have to be a Role Skill to contribute to a Synergy. The full rules, requirements and Unique Trait Catalogue appear in §16.9.

2.5 · HIT POINTS AND HIT DIE

Hit Points, abbreviated HP, represent how much a character can endure before being taken out of combat.

Wounds, blows, falls, explosions and other effects can reduce the character's HP.

Starting HP is not the same for everyone.

Race establishes:

- starting HP;
- the racial Hit Die.

A Tontatta, a Human and a Giant therefore do not start with the same physical resilience, nor develop their HP at the same rate during the campaign.

CURRENT HP AND MAXIMUM HP

The sheet distinguishes between:

Maximum HP	The total Hit Points the character can normally have.
Current HP	How many Hit Points they have at that moment.

When a character takes damage, their Current HP is reduced.

Maximum HP remains unchanged unless a rule modifies it.

For example, a character with:

18 / 30 HP

has 30 Maximum HP, but at that moment only 18 Current HP remain.

Healing and other HP recovery effects cannot normally raise Current HP above Maximum HP unless an ability explicitly states otherwise.

Rules for healing, recovery, critical conditions and reaching 0 HP are covered in the dedicated chapters.

THE HIT DIE

Every Race has its own Hit Die.

The Hit Die represents the Race's natural resilience and determines how much the character's Maximum HP increases when they receive an Upgrade.

The Hit Dice used by Races are:

d6, d8 e d10

The Hit Die is not rolled during character growth.

Instead, each Upgrade uses a fixed value equal to half the Hit Die's maximum value.

HIT DIE	HP GAINED PER UPGRADE
d6	+3 HP
d8	+4 HP
d10	+5 HP

There is therefore no randomness in Hit Point growth.

Two characters of the same Race who have received the same number of Upgrades gain the same amount of HP through their Hit Die, unless Talents, abilities or other rules directly modify their Maximum HP.

HP GROWTH

With each Upgrade, the character automatically increases their Maximum HP by half the maximum value of their racial Hit Die.

The standard progression is therefore:

d6	→	**+3 HP per Upgrade**
d8	→	**+4 HP per Upgrade**
d10	→	**+5 HP per Upgrade**

For example, a character has:

Maximum HP: 14; Hit Die: d6

At the first Upgrade, they gain:

14 + 3 = 17 HP

At the second:

17 + 3 = 20 HP

At the third:

20 + 3 = 23 HP

Growth is therefore constant and predictable.

EXAMPLE WITH A D8 HIT DIE

A character starts with:

16 HP; d8 Hit Die

Each Upgrade adds:

+4 HP

Their progression is therefore:

UPGRADE	MAXIMUM HP
Creation	16
1st Upgrade	20
2nd Upgrade	24
3rd Upgrade	28
4th Upgrade	32
5th Upgrade	36

EXAMPLE WITH A GIANT

A Giant has:

22 starting HP; d10 Hit Die

With each Upgrade, they gain:

+5 Maximum HP

Their progression is therefore:

22 → 27 → 32 → 37 → 42 → 47…

The racial resilience advantage therefore does not concern only starting HP.

A naturally tougher Race continues to gain more HP during growth, but the difference remains proportionate to the overall progression rate.

THE HIT DIE IS RACIAL

The Hit Die depends on Race, not Role.

Becoming a Fighter, Doctor, Cook or Navigator, or developing a Second Role, does not automatically change your Hit Die.

A Human Fighter and a Human Archaeologist both have:

d6 Hit Die

and therefore normally gain:

+3 HP per Upgrade

What differs between the two characters is how they develop and use their abilities, rather than the natural growth of their Hit Points.

Talents, powers, equipment or other rules can modify Maximum HP, recovery or resilience when they explicitly state this.

WHY THE HIT DIE IS NOT ROLLED

HP growth should represent the character's development, rather than depend on luck.

If the Hit Die were rolled at each Upgrade, two characters of the same Race and with the same number of advancements could reach the same point in the campaign with very different amounts of HP solely because of their dice results.

Using fixed growth instead:

d6 = +3 HP; d8 = +4 HP; d10 = +5 HP

the Race has a precise, predictable influence on the character's resilience.

The Hit Die thus continues to distinguish more fragile Races from naturally tougher ones without making Hit Points grow faster than other elements of progression.

2.6 · STAMINA

Stamina, abbreviated **ST**, represents the reserve of energy a character can spend to sustain their most demanding abilities.

Enhanced Techniques, Talents, Haki, Special Moves and other effects can require Stamina expenditure.

Every pirate begins their adventure with:

6 MAXIMUM ST

The sheet always distinguishes between:

Maximum Stamina
The total amount of ST the character can have.

Current Stamina
The amount of ST still available at that moment.

A character with:

7 / 16 ST

has 16 maximum Stamina, but 7 remain to spend.

SPENDING STAMINA

Every ability using Stamina explicitly states its cost.

If a Technique requires:

5 ST

the character must have at least 5 ST available to use it and subtract them from their reserve.

When several abilities are combined and their rules specify separate costs, those costs are added together.

For example:

Technique: 5 ST
Talent: 2 ST

Total cost:

7 ST

The character cannot spend Stamina they do not have.

IMMEDIATE COSTS AND UPKEEP

Stamina is not always consumed at the same moment.

Some abilities require an **immediate cost**.

Spend 3 ST to use this ability.

Others can require an ongoing cost:

1 ST per turn to maintain the effect.

In these cases, activation and upkeep must be considered separately.

If an ability remains active for several turns, the character must continue to have the Stamina needed to sustain it.

The individual ability's description always specifies **when** and **how much** to pay.

STAMINA GROWTH

Stamina increases with **Upgrades**, but its growth progressively slows.

A young pirate quickly improves their ability to sustain exertion.

Over time, however, increasing that reserve further becomes more difficult.

The standard progression is:

UPGRADE TIER	STAMINA INCREASE
1-10	+1 ST each Upgrade
11-20	+1 ST every 2 Upgrades
21-35	+1 ST every 3 Upgrades
36+	+1 ST every 5 Upgrades

Starting from the initial 6 ST, growth produces values such as:

UPGRADE REACHED	MAXIMUM ST
0	6
1	7
5	11
10	16
12	17
20	21
23	22
35	26
40	27
50	29

Stamina therefore keeps growing even in very long campaigns, without increasing indefinitely at the same rate.

EXACTLY WHEN IT INCREASES

To make progression easy to follow, increases occur at the following Upgrades:

1-10: at every Upgrade.

11-20: at Upgrades **12, 14, 16, 18 and 20**.

21-35: at Upgrades **23, 26, 29, 32 and 35**.

From the 36th onwards: at Upgrades **40, 45, 50, 55, 60...**

You therefore only need to check the number of Upgrades reached to know whether maximum Stamina increases.

⚓ NOTE FOR THE GAME MASTER

This progression represents the **standard reference** for Grand Line Chronicles, rather than a mandatory structure for every campaign.

The Game Master can modify it according to their adventure's length and pace.

A short campaign can use faster Stamina growth. A particularly long campaign can slow it further.

What matters is maintaining a sensible relationship between **available Stamina** and **ability costs**, so that spending ST remains a meaningful choice.

WHY GROWTH SLOWS

A character's power does not increase only through Stamina.

During the campaign, these also grow:

Attributes, Skills, Techniques, Talents, Haki, Devil Fruits, equipment and other abilities.

Linear Stamina growth would therefore allow more advanced characters not only to have far more powerful abilities, but also to use them constantly.

With slower progression, however, the character becomes more enduring without turning Stamina into a practically inexhaustible resource.

A Technique costing **7 or 8 ST** remains significant even for a veteran.

STAMINA AND POWER

Stamina does not directly determine an ability's power.

A d20 Technique does not become stronger because the character has 25 ST rather than 15.

A larger reserve, however, allows you to:

use more costly abilities, sustain effects longer and combine more resources before running out.

The difference is fundamental.

Die growth increases **power**.

Stamina growth increases **endurance under exertion**.

TECHNIQUES AND STAMINA

A Technique does not necessarily consume Stamina.

The effects added to the Technique determine its cost where applicable.

This allows a character to have both simple, inexpensive abilities and far more demanding moves.

During a battle, they can therefore choose whether to conserve their energy or invest a significant part of their reserve in a decisive attack.

A 2 ST Technique and an 8 ST Technique should not carry the same weight in the player's decision.

Stamina exists precisely to create that difference.

TALENTS AND STAMINA

Some **Talents** require ST expenditure.

When a Talent has a cost, it must be paid as indicated in its description.

Talents with **0 ST**, however, do not consume Stamina and can function as passive or conditional abilities according to their own rules.

This becomes particularly important when composing **Special Moves**, where several elements can contribute to the same use.

HAKI AND STAMINA

Haki uses its own resource called **PIP**, but some of its abilities can also require Stamina.

The two resources remain separate.

An ability can therefore require, for example:

1 PIP to activate

e:

1 ST per turn to be maintained.

Spending PIP does not automatically mean spending Stamina, and vice versa.

Its full operation is described in the Haki chapter.

WHEN STAMINA REACHES 0

A character at:

0 ST

is not automatically defeated.

They can still move, act and use every ability that does not require Stamina expenditure.

They cannot, however, use an ability without enough ST to pay its cost.

An ability requiring 3 ST cannot be used with only 2 ST available.

Some effects can also directly reduce Stamina to 0 or impose specific consequences when this happens. In that case, the ability's description takes precedence.

RECOVERING STAMINA

Stamina can be recovered through rest, abilities, meals, Talents, Songs and other effects provided by the game.

When ST is recovered:

Current Stamina cannot normally exceed Maximum Stamina.

If an effect allows this limit to be exceeded, it must explicitly state so.

The different forms of recovery are explained in their respective chapters.

2.6.1 · REST AND RECOVERY

There are two main forms of rest.

SHORT REST

A Short Rest can be taken only when the characters are outside immediate danger and can actually interrupt their activities.

During a Short Rest, a character recovers:

- HP equal to half their Maximum HP;
- ST equal to half their Maximum Stamina.

Halves are always rounded up.

Recovery cannot raise HP or ST above their respective maximum values.

A Short Rest also recovers resources expressly stated to be restored by it, such as Haki PIP.

LONG REST

A Long Rest requires a genuine period of sleep and is taken outside active scenes.

At the end of a Long Rest, the character fully recovers their HP and ST, as well as other resources that expressly indicate a Long Rest as their recovery condition.

RESTING MEANS RESTING

A character cannot use a Short or Long Rest as working time.

Crafting, repairs, construction, demanding training and other activities requiring continuous action are not performed simultaneously with a Rest.

Abilities that expressly permit particular activities during a Rest constitute an exception.

2.7 · MOVEMENT

Movement indicates how many metres a character can travel during their turn.

The value depends mainly on **Race** and represents elements such as build, stride length, natural agility and particular physical abilities.

The sheet always expresses Movement in **metres**.

RACIAL BASE MOVEMENT

RACE	MOVEMENT	SPECIAL MOVEMENT
Human	10 m	
Fish-Man / Merman	10 m	20 m in water
Giant	14 m	
Mink	14 m	16 m in Sulong
Lunarian	10 m	
Cyborg	10 m	
Tontatta	8 m	

These values represent the Race's natural mobility.

A Giant covers more ground thanks to their stride.

A Tontatta, while potentially extremely agile, has a much smaller body and therefore travels a shorter distance with their normal Movement.

MOVEMENT DURING THE TURN

During their turn, a character can travel a total distance equal to their **Movement** value.

A character with:

Movement 10 m

therefore allows movement of up to 10 metres.

They do not have to use it all.

They can move only a few metres, remain still or use their Movement according to the position they want to reach.

When combat permits, Movement can be divided around the character's other actions.

For example, a pirate with Movement 10 m could:

move 4 m → act → move the remaining 6 m.

The total distance used remains:

10 m

THERE IS NO UNIVERSAL RUN

In Grand Line Chronicles, **there is no generic Run action that automatically doubles Movement**.

The value on the sheet represents how much ground the character can normally cover during their turn.

To exceed it, they must have something that permits it.

This can be:

Techniques, Talents, racial abilities, transformations, Devil Fruits, Modules, Haki or other specific effects.

This makes mobility a real feature of the build.

A character specialising in movement can reach distances that a normal character cannot cover merely by sacrificing their Action.

MOVEMENT AND DISPLACEMENT

It is important to distinguish between **Movement** and **Displacement**.

MOVEMENT

It is the base value on the sheet.

It indicates how many metres the character can normally travel in their turn.

DISPLACEMENT

It is movement granted by a specific ability.

A Technique might say:

Dash: move 5 m.

Those 5 metres come from the Technique and follow its rules.

They do not automatically increase the Movement value written on the sheet.

This allows Techniques and Talents to create genuinely more mobile characters without constantly modifying the base statistic.

EXAMPLE

A Human has:

Movement 10 m

During their turn, they use all 10 metres.

They then activate an ability granting:

Displacement of 5 m

They can therefore travel a total of:

15 m

The first 10 come from their Movement.

The other 5 come from the ability.

Their base Movement still remains:

10 m

SPECIAL RACIAL MOVEMENTS

Some Races modify their Movement under particular conditions.

FISH-MAN / MERMAN

On land, they use:

10 m

In water, they use:

20 m

The greater aquatic speed is not additional Displacement.

It replaces the normal Movement value while the character is in the appropriate environment.

MINK

The Mink normally has:

14 m

During **Sulong**:

16 m

Here too, the special value temporarily replaces the normal one.

MODIFYING MOVEMENT

Some abilities can directly modify the Movement value.

A rule can, for example, say:

Movement +3 m

or:

double Movement

or:

Movement 20 m for this scene

When this happens, the character's base value is temporarily modified as indicated.

This differs from an ability that simply grants **additional Displacement**.

The distinction is important.

If an ability says:

Movement ×2

it affects the Movement value.

If it says:

move 5 m

it instead grants only that movement.

OUTSIDE COMBAT

Movement in metres is particularly useful when precise position matters.

Outside combat, you do not need to measure every second of running.

If a character tries to:

reach a ship setting sail, pursue someone through a city, escape a collapsing building or quickly cross dangerous terrain,

the Game Master can handle the situation narratively or require an appropriate check.

In these cases, abilities such as these can become important:

Athletics, Acrobatics, racial characteristics, Talents or movement Techniques.

The Movement value remains a useful reference, but does not turn every pursuit into a series of turns counted metre by metre.

DIFFICULT TERRAIN AND PARTICULAR MOVEMENTS

Not all movement takes place on clear ground.

Climbing, swimming, moving through rubble, crossing unstable surfaces or jumping between two buildings can require specific rules or checks.

In these cases, the Game Master determines whether normal Movement is sufficient or a check is needed.

The character's abilities can modify these conditions.

A Fish-Man, for example, approaches water completely differently from most other Races.

A Talent might allow a particular type of terrain to be ignored.

A Technique might allow an obstacle to be bypassed entirely through Displacement.

The detailed rules are explored further in the combat chapter.

MOVEMENT AND GROWTH

Base Movement **does not increase automatically with Upgrades**.

A character does not become progressively faster simply because they have received more advancements.

Growth in mobility instead comes through what the character develops:

Talents, Techniques, transformations, Fruits, Modules and other abilities.

This keeps the natural difference between Races significant even in advanced campaigns.

2.8 · PASSIVE DEFENCE AND ACTIVE DEFENCE

Defence represents a character's ability to avoid, block or resist attacks.

Grand Line Chronicles has two main forms of defence:

Passive Defence, always present and with no cost;

Active Defence, a voluntary choice that uses the character's **Reaction**.

The two defences represent different approaches.

Passive Defence is reliable and automatic.

Active Defence lets you try to neutralise an attack directly, but involves risk.

PASSIVE DEFENCE

Passive Defence is a fixed Threshold.

It requires no rolls, Actions, Reactions or Stamina.

The formula is:

PASSIVE DEFENCE = SUM OF THE MAXIMUM VALUES OF THE RACIAL ATTRIBUTE'S GRADE + 1

PASSIVE DEFENCE AND PRESTIGE

When the Racial Attribute enters Prestige, Passive Defence continues to depend on its complete Grade. To determine it, add the maximum values of all dice making up the Racial Attribute's Grade, then add +1. No roll is made.

The complete Passive Defence table, including Prestige Grades, appears in §6.8.

Example: a character with a d20+d8 Racial Attribute has PD 29. With Monstrous Body, PD becomes 31; with Living Fortress, it becomes 33. Living Fortress replaces Monstrous Body's +2 bonus with +4 total: the two values are not added together.

Base Passive Defence remains determined by the Racial Attribute. Any explicit PD modifiers granted by Talents, Haki, Techniques or Unique Traits apply to the final value. Monstrous Body grants +2 PD; Living Fortress raises this bonus to +4, replacing the +2 without stacking with it.

Modifiers from different sources combine according to their respective rules; Evolutions replace the previous benefit (§16.9).

For example:

d8 Racial Attribute	→	**Passive Defence 9**
d12 Racial Attribute	→	**Passive Defence 13**

THE RACIAL ATTRIBUTE

Passive Defence always uses the **Attribute enhanced by Race**.

RACE	RACIAL ATTRIBUTE
Human	chosen by the player
Fish-Man / Merman	Strength
Giant	Strength
Mink	Technique
Lunarian	Spirit
Cyborg	Strength
Tontatta	Strength or Technique

If the Racial Attribute grows during the campaign, Passive Defence automatically increases too, even beyond d20.

For example:

d8	→	**Defence 9**
d10	→	**Defence 11**
d12	→	**Defence 13**
d20	→	**Defence 21**

Passive Defence does not automatically increase with the number of Upgrades.

ATTACK AGAINST PASSIVE DEFENCE

When a character does not use Active Defence, the attack is compared with their Passive Defence.

To hit:

ATTACK > PASSIVE DEFENCE

If the result equals Defence:

DEFENCE HOLDS

If it is lower:

THE ATTACK MISSES

Against a target with:

Passive Defence 9

we would therefore have:

ATTACK	RESULT
8	misses
9	Defence holds
10	hits, margin +1
12	hits, margin +3
13	hit with margin +4

Attack margin becomes important for various combat rules, including **Style Signatures**.

ACTIVE DEFENCE

Every combatant can attempt **Active Defence** when targeted by an attack.

Active Defence uses:

1 REACTION

The player must declare it when selected as the target, before the attacker's attack roll.

Rather than relying on their Passive Defence, the character directly attempts to meet or exceed the opponent's roll.

Active Defence is therefore a gamble.

If it succeeds, the attack is completely neutralised.

If it fails, the blow lands.

WHAT TO ROLL

The roll depends on **how the character tries to defend themselves**.

The two basic forms are:

ACTIVE DEFENCE	ROLL
Dodge	**Technique + Acrobatics**
Block	**Strength + Athletics**

ATTACK TECHNIQUE AS ACTIVE DEFENCE

Besides Dodge and Block, you can use a compatible attack Technique as Active Defence. Declare this choice when selected as a target, before the attacker's attack roll. Spend the Reaction and immediately pay all the Technique's normal ST costs; failure does not refund Stamina. Make the normal Technique roll: Attribute + Technique Die, unless specific rules apply. If you meet or exceed the attacker's roll, you neutralise the attack; ties favour the defender. A Technique used to defend does not normally deal damage or automatically apply its offensive effects. With the Counterblow Talent, only if the defence exceeds the opponent's roll do you also deal the Technique's normal Damage Die. A tie defends but deals no damage.

The player describes their approach before the roll.

DODGE

A **Dodge** represents physically avoiding the attack's path through speed, coordination and body control.

Roll:

TECHNIQUE + ACROBATICS

It can represent actions such as moving at the last instant, ducking under a blow, twisting out of its path or using agility and timing to avoid being reached.

BLOCK

A **Block** represents facing the attack directly through strength and physical solidity.

Roll:

STRENGTH + ATHLETICS

It can mean stopping a blow, countering a push, using your body to absorb the impact or opposing force with force.

Exactly how this happens remains narrative, provided it is consistent with the situation.

IF YOU DO NOT HAVE THE SKILL

Active Defence is available to every combatant.

You therefore do not need Acrobatics or Athletics to attempt it.

If the character lacks the appropriate Skill, they use only the Attribute.

For example, a character without Acrobatics can still attempt a Dodge by rolling:

TECHNIQUE

A character without Athletics can attempt a Block by rolling:

STRENGTH

Naturally, having and developing the Skill makes Active Defence much more effective.

DECLARING ACTIVE DEFENCE

When a character is selected as an attack's target, they must decide whether to rely on Passive Defence or use Active Defence before the attacker makes their attack roll.

The defender therefore does not know the attack's result when making this decision.

If they choose Active Defence, they use their Reaction and the defensive roll's result replaces Passive Defence for that attack.

Once the choice has been made, they cannot return to Passive Defence after seeing the results.

RESOLVING ACTIVE DEFENCE

Active Defence ≥ Attack	→	**attack defended**
Attack > Active Defence	→	**successful attack**

Ties always favour the defender.

If Active Defence fails, Passive Defence is not used as a second protection.

EXAMPLE: DODGE

An enemy declares an attack. Before the roll, the target chooses to dodge.

The target has:

d8 Technique
d6 Acrobatics

They spend their Reaction. Attack and defence are then rolled.

The attack scores:

14

The target rolls:

d8 + d6

If they score:

14 or more → dodges the attack

If they score:

13 or less → is hit

EXAMPLE: BLOCK

A character has:

d10 Strength
d8 Athletics

An enemy declares an attack, and the character chooses to block before the roll.

The attack totals:

16

The character rolls:

d10 + d8

With:

16 or more → successful block

With:

15 or less → failed block

PASSIVE DEFENCE OR ACTIVE DEFENCE

When a character attempts Active Defence, they choose to take a risk.

Passive Defence **is not added** to the roll.

Nor does it function as a safety net after failure.

If the character chooses to use their Reaction to defend actively:

the Active Defence result replaces Passive Defence for that attack.

If the roll fails, the attack hits.

This prevents Active Defence from becoming merely a free second chance.

EXAMPLE

A character has Passive Defence 11. When the enemy declares the attack, before the attack roll, they choose to attempt Active Defence and spend their Reaction.

The attack scores 12; Active Defence scores 9. The character is hit and cannot return to Passive Defence 11 after seeing the results.

ACTIVE DEFENCE DOES NOT DEAL DAMAGE

Normal Active Defence serves only to:

NEUTRALISE THE ATTACK

A successful Dodge does not automatically hit the enemy.

A successful Block does not automatically deal damage.

Even if the Defence result greatly exceeds the opponent's, basic Active Defence does not produce a free attack.

TALENTS AND COUNTERATTACKS

Some **Talents** and abilities allow further development of Active Defence.

For example, they can turn a successful defence into:

a **Counterattack**, a control effect, Displacement or another particular consequence.

In these cases, the **Talent** grants the additional effect.

It is not a property of basic Active Defence.

This allows true defensive specialisations.

One character can simply be good at avoiding blows.

Another can build their style around the idea of:

waiting for the attack, neutralising it and immediately punishing the opening.

PARRIES AND SPECIFIC ABILITIES

Techniques, Talents, weapons, Haki or other abilities can provide different methods of Active Defence.

An ability might, for example, allow a **Parry** using a different formula.

When a specific ability indicates which roll to make, that formula replaces the normal one:

Technique + Acrobatics

or:

Strength + Athletics

The specific rule always takes precedence over the general rule.

THE REACTION IS A RESOURCE

Active Defence consumes the character's **Reaction**.

Once used, the character cannot spend that same Reaction again until it is recovered according to the normal combat rules.

This means a character must choose when taking a risk is truly worthwhile.

They can use their Reaction to stop the first incoming attack.

Or save it, fearing something more dangerous shortly afterwards.

Likewise, if they have already used their Reaction for another ability, they cannot then use normal Active Defence.

Defence therefore becomes a tactical decision, rather than an automatic roll against every attack.

DEFENCE MODIFIERS

Some abilities can temporarily modify Passive Defence:

Passive Defence +2

or:

Passive Defence −2

Others can directly modify Active Defence:

+1 die to Dodge

or:

Advantage on the next Block

The two systems remain distinct.

A Passive Defence bonus does not automatically modify Active Defence, or vice versa, unless a rule specifies this.

DEFENSIVE GROWTH

A character can improve their defence in different ways.

Passive Defence grows by increasing the Racial Attribute.

Active Defence instead improves by increasing the elements used in its rolls.

For example:

Technique + Acrobatics

or:

Strength + Athletics

This creates two different defensive paths.

A character can have very high Passive Defence and rely mainly on it.

Another can have lower Passive Defence but invest heavily in Technique and Acrobatics, becoming extremely difficult to hit when they choose to use their Reaction.

SUMMARY

Passive Defence is:

RACIAL ATTRIBUTE DIE VALUE + 1

To hit:

ATTACK > PASSIVE DEFENCE

A tie means Defence holds.

Every combatant can also use:

1 REACTION

to attempt **Active Defence**.

The basic formulas are:

DODGE = TECHNIQUE + ACROBATICS

BLOCK = STRENGTH + ATHLETICS

If the Skill is missing, use only the Attribute.

To succeed:

Active Defence ≥ Attack

On a tie, Defence holds.

Passive Defence does not protect the character again after failed Active Defence.

Basic Active Defence does not deal damage.

Talents and specific abilities, however, can turn it into a Parry, Counterattack or other advanced forms of defence.

2.9 · DUAL ROLE

A pirate does not have to be defined by a single profession or discipline.

During growth, they can develop a **Second Role**, gaining access to another Talent path.

Dual Role therefore allows hybrid characters, for example:

- **Fighter + Cook**
- **Navigator + Archaeologist**
- **Doctor + Fighter**
- **Engineer + Captain**

without automatically turning both classes into two complete specialisations.

MAIN ROLE

Every character has a **Main Role**.

It is the Role chosen as their fundamental specialisation.

The Main Role determines their:

ROLE SKILL AT D8

At creation, the character receives **only one Role d8**.

If a character chooses, for example:

Cook

their Role Skill is:

d8 Cooking

If they choose:

Fighter · Striker

they can use the Skill provided by their Style.

SECOND ROLE

The character can also have a:

SECOND ROLE

The Second Role represents a second growth path, but does not automatically grant a second Skill at d8.

The fundamental rule is:

the character has only one free Role Skill at d8.

The Second Role mainly allows access to **its Talent tree**.

It does not automatically create a second d8.

THE SECOND ROLE'S SKILL

Second Role Talents are still unlocked through the **Skill associated with that Role**.

The difference is that this Skill must be developed normally among the character's Skills.

For example, a pirate is a:

Fighter · Swordsman

as their Main Role and has:

d8 Athletics

They subsequently develop:

Cook

as their Second Role.

The Cook uses:

Cooking

The character does not automatically receive:

d8 Cooking

If they have d4 Cooking, the Cook path is read through:

d4 Cooking

If they raise it to d8:

d8 Cooking

they can access the corresponding tier of the Cook tree.

The second path must therefore actually be trained.

SHARED SKILLS

Two Roles may use the same Skill.

In this case, there are not two separate dice.

Both use that Skill's actual value.

If the Main Role has:

d8 Athletics

and the Second Role also uses Athletics, the second tree can use:

d8 Athletics

to determine which Talents are available.

This makes some combinations naturally more compatible.

ONLY ONE FREE D8

Dual Role does not mean:

two Roles = two d8 Skills

The rule remains:

ONLY 1 ROLE SKILL AT D8

The other competencies must be developed normally.

This prevents choosing two Roles from automatically being superior to specialising in just one.

The advantage of Dual Role is **versatility**, rather than a greater number of free dice.

THE SECOND ROLE GRANTS TALENTS

In the current system, the Second Role functions as a **second class dedicated to Talents**.

It therefore lets you access the relevant tree and acquire Talents when the required Skill reaches the necessary Grade.

For example:

a pirate could be a:

Fighter · Striker + Cook

and use Striker Talents together with Cook Talents.

Or:

Navigator + Captain

combining navigation abilities with command Talents.

Having a Second Role does not automatically grant every element of the new Role.

Only **Talents actually acquired** become part of the character's build.

TALENTS ALWAYS FOLLOW THEIR OWN SKILL

Each tree continues to check its own Skill die.

Therefore, formally having a Second Role is not enough to immediately reach its highest tiers.

If the required Skill is still low, the upper tiers remain closed.

Progression remains:

develop the Skill → reach the required Grade → access the Talents in that tier

This applies whether it is the first or second Role.

COMPLETE EXAMPLE

Mira is a:

FIGHTER · SWORDSMAN + COOK

Her Main Role is Swordsman.

Her main Skill is:

d8 Athletics

Among her Skills, she also has:

d6 Cooking

The situation is therefore:

PATH	SKILL	GRADE
Swordsman	Athletics	**d8**
Cook	Cooking	**d6**

Mira can develop her Swordsman path normally.

She also has the Cook path, but the available Talents are determined by **d6 Cooking**.

When she raises Cooking to d8, she will open the corresponding options in the Cook tree.

Dual Role has not given her power for free.

It has given her **another direction to invest in**.

SWAPPING THE MAIN ROLE

Character management also allows you to swap which of the two classes is considered the main one.

When this happens, the **main d8** role passes to the other class according to the new configuration.

This feature represents characters whose identity changes during the campaign.

A pirate might begin primarily as a Fighter and, after many narrative arcs spent at the stove, become first and foremost a Cook.

This change should not be treated as a simple switch for temporary convenience.

When it happens during a campaign, it must represent real character development and can be agreed with the Game Master.

WHEN THE SECOND ROLE IS OBTAINED

The starting character creator defines the **Main Role**.

The Second Role can be registered later in character management.

The narrative moment at which a character develops a second class depends on the campaign and the progression established by the Game Master.

The system therefore does not require every pirate to have two Roles.

A character can freely remain focused on a single path throughout their adventure.

SPECIALISATION OR VERSATILITY

A character with one Role can concentrate Skills, Talents and growth resources in a very precise direction.

A character with two Roles instead divides their investment among more possibilities.

There is no artificial penalty for Dual Role.

Its cost emerges naturally from progression:

developing two trees requires **adequate Skills and investment in both paths**.

The more paths you follow, the more you must decide where to spend your resources.

2.10 · STARTING PROGRESSION

Character creation establishes only the starting point.

From then on, the pirate grows through Upgrades, developing resilience, abilities, Techniques and new Talents.

An Upgrade represents a significant moment of character growth: training, experience, battles, voyages, defeats, discoveries and important campaign turning points.

There is no fixed number of Upgrades a campaign must reach.

The Game Master establishes their pace.

A short campaign can have a few substantial Upgrades.

A long campaign can distribute many throughout the voyage.

THE CHARACTER AT CREATION

A new pirate already has everything needed to begin the adventure.

At creation, these are defined:

Race; Attributes; Skills; Main Role; Racial Technique; up to 2 starting personal Techniques; starting Hit Points; Hit Die; 6 Stamina; Movement; Passive Defence; and optionally a Devil Fruit

The character therefore does not start empty.

They start with their own mechanical identity, to be developed during the campaign.

WHAT AN UPGRADE INVOLVES

An Upgrade can advance the character on several fronts.

GROWTH	EFFECT
Hit Points	increase automatically
Stamina	increases according to its progression curve
Ability Points	are assigned by the GM
Talent	can be acquired if available
Progression	new Grades can open Talents, effects and options

Not everything grows in the same way.

Some elements increase automatically.

Others depend on the player's decisions.

Others depend directly on narrative growth established by the Game Master.

HIT POINTS

At each Upgrade, the character automatically increases their Maximum HP.

The increase equals half the maximum value of the racial Hit Die.

The Hit Die is not rolled.

Therefore:

HIT DIE	HP GAINED PER UPGRADE
d6	+3 HP
d8	+4 HP
d10	+5 HP

For example, a character with:

14 HP; d6 Hit Die

progresses as follows:

14 → 17 → 20 → 23 → 26 → 29...

A character with:

16 HP; d8 Hit Die

instead progresses:

16 → 20 → 24 → 28 → 32 → 36...

The Hit Die remains linked to Race and therefore continues to influence the character's resilience throughout the campaign.

STAMINA

All characters begin with:

6 ST

Stamina increases with Upgrades, but growth progressively slows.

The standard progression is:

UPGRADE TIER	PROGRESSION
1-10	+1 ST each Upgrade
11-20	+1 ST every 2 Upgrades
21-35	+1 ST every 3 Upgrades
36+	+1 ST every 5 Upgrades

Increases therefore occur approximately at:

1, 2, 3, 4, 5, 6, 7, 8, 9, 10

then:

12, 14, 16, 18, 20

then:

23, 26, 29, 32, 35

and subsequently:

40, 45, 50, 55, 60...

Some reference points:

UPGRADE	MAXIMUM STAMINA
0	6
5	11
10	16
20	21
35	26
50	29

This progression is a standard reference, not an absolute constraint.

The Game Master can modify it according to campaign length and pace.

A short campaign can use faster growth.

An extremely long campaign can slow it further.

The aim is to keep the relationship meaningful between:

- available Stamina
- e

the cost of the most powerful abilities.

ABILITY POINTS

Upgrades are also one of the main opportunities to receive:

Ability Points, or AP

The Game Master decides how many AP to assign.

The player then decides where to invest them.

Ability Points are used to develop:

- Attributes;
- Skills;
- any abilities that expressly state they use AP.

Techniques, both racial and Custom, do not have their own AP progression. Custom Techniques' limit depends on the associated Attribute; developments of racial Techniques are granted by the GM according to their respective rules.

Growth therefore does not all happen automatically.

Every investment represents a choice.

Spending AP on Strength means not spending them on a Skill at the same time.

AP thresholds

The standard progression uses these thresholds:

TRANSITION	AP REQUIRED
d4 → d6	10
d6 → d8	25
d8 → d10	60
d10 → d12	150
d12 → d20	400

Once the required threshold is reached, the die advances to the next Grade.

The scale remains:

d4 → d6 → d8 → d10 → d12 → d20

These thresholds are also reference values.

The Game Master can modify them according to the campaign.

EXAMPLE

A character has:

d6 Acrobatics

When it reaches the AP needed for the transition:

d6 → d8

the Skill becomes:

d8 Acrobatics

From then on, it uses the new die in all appropriate checks, including any Active Defence based on Technique + Acrobatics.

The same principle applies to Attributes and abilities using AP.

ATTRIBUTES DO NOT INCREASE AUTOMATICALLY

Receiving an Upgrade does not automatically increase:

Strength; Technique; Spirit; Cunning

To grow an Attribute, you must invest the necessary AP in it.

A character concentrating many AP on Strength can become physically extremely powerful, but slows their Skill development. Techniques do not receive AP.

Growth therefore comes from the player's priorities.

SKILLS

Skills also grow through AP.

This is especially important for Role Skills, because their Grade determines which tiers of the Talent tree become accessible.

For example:

d8 Role Skill → first tier; d10 → second tier; d12 → third tier; d20 → final tier

For a Second Role, use the actual value of the Skill associated with that path.

TECHNIQUES

Techniques can also grow along the dice scale.

A more advanced Technique can access effects, Slots and options unavailable to a lower-Grade Technique.

A Technique's growth represents refinement of that specific move.

The full rules are covered in the Technique chapter.

TALENTS

Normally, each Upgrade allows the character to acquire:

1 Talent

The Talent must, however, belong to an already accessible tier.

Having many Upgrades is therefore not enough.

You must have the required Grade in the Skill associated with that path.

This prevents a character from jumping directly to the most advanced abilities without actually developing their specialisation.

For a character with Dual Role, the Talent can be chosen from the paths they can actually access.

TWO TYPES OF PROGRESSION

A pirate's growth follows two broad systems.

Progression through AP

These are developed through Ability Points:

- Attributes;
- Skills;
- abilities that expressly state they use this resource.

Custom Techniques instead follow the Grade of the Attribute to which they are linked.

This part of growth is mainly in the player's hands.

After receiving AP, they decide where to invest them.

NARRATIVE PROGRESSION

Some powers, however, are not bought with AP.

In particular:

Fruit Die; Haki Die

grow when the Game Master considers that the story and character development justify it.

They are therefore forms of narrative progression.

FRUIT DIE

The Fruit Die represents the level of mastery of the power.

It normally starts at:

d4

and can grow along the scale:

d4 → d6 → d8 → d10 → d12 → d20

It is not increased by spending AP.

It does not increase automatically on receiving Upgrades.

The Game Master establishes when the character has reached a new level of mastery.

This can happen after:

specific training, significant uses of the power, meaningful defeats, new discoveries, extreme moments or narrative arcs centred on the Fruit.

The Fruit Die progressively determines access to the power's most advanced abilities.

HAKI DIE

The Haki Die also follows narrative progression.

It is not bought with AP and does not grow automatically at each Upgrade.

The Game Master determines its advancement.

For Armament and Observation, progression follows:

d6 → d8 → d10 → d12 → d20

Growth can represent:

training, greater control of willpower, combat experience, extreme situations or significant story moments.

The Haki Die's Grade also determines access to its effects and the available PIP.

Conqueror's Haki instead follows its own specific progression and does not use the same structure as Armament and Observation.

The full rules are covered in the Haki chapter.

AP AND NARRATIVE PROGRESSION ARE NOT THE SAME

It is important to maintain this distinction.

A character could have a great many AP but not yet have developed higher Haki.

Likewise, they cannot spend hundreds of AP to force their Fruit towards Awakening.

These powers must also mature through the story.

The distinction is therefore:

AP	→	**Attributes, Skills and abilities that state they use them**
Custom Techniques	→	**limited by the Attribute used**
Game Master + narrative development	→	**Fruit and Haki**

CAMPAIGN PACE

The system does not require every campaign to grow at the same speed.

The Game Master can decide:

when to assign Upgrades; how many AP to assign; whether to modify AP thresholds; how quickly to increase Stamina; when to grow the Fruit Die; when to grow the Haki Die

This allows the same system to support both relatively short campaigns and voyages lasting many narrative arcs.

GROWTH NEED NOT BE UNIFORM

Two characters with the same number of Upgrades can be completely different.

One might have invested mainly in:

Strength and offensive Techniques

another in:

Skills and Talents

another might have quickly developed their:

Devil Fruit

while another has begun to master:

Armament or Observation Haki

The number of Upgrades shows how far they have travelled.

The sheet shows how that journey has changed the character.

CHAPTER 3 ·

RACES

Race defines some innate characteristics of the pirate: how their body works, their natural abilities and the peculiarities that distinguish them from other creatures of the sea.

It does not determine who the character is, which Role they fill or which path they follow.

Two characters of the same Race can have completely different developed Attributes, Skills, Roles and fighting styles.

Mechanically, however, Race forms one of the sheet's foundations.

3.1 · HOW TO READ A RACE

Every Race is described through a series of common elements.

Its sheet includes:

ELEMENT	WHAT IT REPRESENTS
Racial Attribute	the Attribute naturally enhanced by the Race
Racial Die	the starting Grade assigned to that Attribute
Starting HP	Hit Points at creation
Hit Die	determines HP growth
Movement	metres normally travelled during a turn
Racial Technique	innate ability possessed by the Race
Disadvantages / Limitations	any specific weaknesses or constraints

These elements are applied before subsequent character-building choices.

RACIAL ATTRIBUTE

Every Race has a **Racial Attribute**.

It can be a specific Attribute, such as:

- **Strength**
- **Technique**
- **Spirit**

or, for some Races, it can be chosen by the player.

The Racial Die establishes that Attribute's starting value.

For example, a Race with:

d8 Strength

starts with d8 Strength.

As seen in Chapter 2, the other Attributes are then completed during character creation.

RACIAL ATTRIBUTE AND PASSIVE DEFENCE

The Racial Attribute also has a second fundamental function.

It determines:

PASSIVE DEFENCE

according to the formula:

RACIAL ATTRIBUTE DIE VALUE + 1

For example:

d8 Strength	→	**Passive Defence 9**
d10 Technique	→	**Passive Defence 11**

When the Racial Attribute grows through AP, Passive Defence therefore grows too.

STARTING HP

Every Race has a **starting HP** value.

This represents the character's natural resilience at creation.

For example, some Races have a relatively normal constitution, while creatures with a far more imposing physique can begin with more Hit Points.

Starting HP is used only as a foundation.

From then on, growth depends on the **Hit Die**.

HIT DIE

The **Hit Die** indicates how many Maximum HP are added at each Upgrade.

The die is not rolled.

Always use half its maximum value.

Therefore:

d6	→	**+3 HP per Upgrade**
d8	→	**+4 HP per Upgrade**
d10	→	**+5 HP per Upgrade**

The Hit Die remains the one determined by Race.

MOVEMENT

Every Race has its own **Movement** value.

This indicates how many metres they can normally travel during their turn.

Some Races also have particular values under certain conditions.

For example, a Race might move faster:

in water

or:

during a specific transformation.

When a Race has special Movement, it is indicated directly in its description.

As established in Chapter 2, **there is no universal Run that doubles Movement**.

RACIAL TECHNIQUE

Every Race has a:

RACIAL TECHNIQUES AND ATTACKS

When a Racial Technique modifies an attack, its effect is added to the attack or Technique used and does not automatically replace the main action.

The character resolves the attack normally, then applies the racial ability according to its conditions and any costs.

The Racial Technique does not automatically grant an additional attack or a new Action unless expressly stated.

RACIAL TECHNIQUE AT D6

The Racial Technique represents an innate characteristic of that Race's body, blood or nature.

It is not one of the personal Techniques created by the player.

It is obtained automatically by choosing the Race.

Racial Techniques can work in very different ways.

Some add their die to certain rolls.

Others modify how the character moves.

Others grant transformations, resistances or special abilities.

The individual Race's description establishes exactly when and how the Technique can be used.

THE RACIAL TECHNIQUE DIE

The Racial Technique normally starts at:

D6

When an ability says to:

add the Racial Die

it refers to the die of the relevant racial ability shown on the sheet.

The Racial Technique still remains distinct from the **Racial Attribute**.

For example, a Race might have:

d8 Strength Racial Attribute

and at the same time:

d6 Racial Technique

These are two different values with different functions.

DISADVANTAGES AND LIMITATIONS

Not every Race has only benefits.

Some have:

- **Disadvantages**
- **physical limitations**
- **unfavourable environmental conditions**

or particular rules linked to their nature.

When a limitation is present, it is an integral part of the Race.

It is not an optional narrative detail.

For example, a particularly powerful ability can be balanced by an unfavourable environmental condition or difficulty using certain objects or structures.

If a Race states:

None

it has no general racial Disadvantage.

RACIAL ABILITIES AND SPECIFIC RULES

A racial rule can modify a general rule.

In that case, the established principle applies:

the specific rule takes precedence over the general rule.

If a character normally has a particular Movement value but their Race sets a different value in water, use the racial one.

If an attack normally follows a certain rule but a racial ability modifies the Damage Die, apply the racial ability.

Every Race's description must therefore be read as an effective part of the character's rules.

THE SEVEN RACES

Grand Line Chronicles currently includes:

- Human
- Fish-Man / Merman
- Giant
- Mink
- Lunarian
- Cyborg
- Tontatta

Each uses the same basic structure, but radically modifies some aspects of character building.

3.2 · HUMAN

Humans are the most versatile Race in Grand Line Chronicles.

They have no mandatory natural Attribute: they can excel in physical strength, precision, willpower or ingenuity.

Their racial ability, **Unwavering Will**, instead represents the drive that emerges when everything seems about to collapse.

RACE SHEET

Racial Attribute: your choice
Racial Attribute Grade: d8
Starting HP: 14
Hit Die: d6
Movement: 10 m
Racial Technique: Unwavering Will
Starting Racial Technique Grade: d6
Disadvantage: None

RACIAL ATTRIBUTE

When creating a Human, the player chooses which of the four Attributes will be their **Racial Attribute**:

- Strength
- Technique
- Spirit

or:

Cunning

The chosen Attribute starts at:

D8

This choice also determines which Attribute is used to calculate **Passive Defence**.

EXAMPLE

A Human chooses:

d8 Technique

as their Racial Attribute.

Their starting Passive Defence is:

8 + 1 = 9

Another Human could instead choose:

d8 Spirit

gaining the same starting Passive Defence, but building their character around completely different characteristics.

HIT POINTS

A Human starts with:

14 HP

Their Hit Die is:

D6

At each Upgrade, they therefore increase their Maximum HP by:

+3 HP

Their progression is, for example:

14 → 17 → 20 → 23 → 26...

MOVEMENT

Human base Movement is:

10 M

They have no particular racial Movement modifiers.

To exceed this value, they must therefore develop Techniques, Talents, Fruits, Modules or other abilities that improve mobility.

RACIAL TECHNIQUE · UNWAVERING WILL

Every Human has:

UNWAVERING WILL

The Racial Technique starts at:

D6

The Racial Technique does not grow through Ability Points. The GM grants its developments during the campaign, following the progression:

D6 → D8 → D10 → D12 → D20

Unwavering Will automatically takes effect when the character is at:

25% OF THEIR MAXIMUM HP OR LESS

While they remain within this threshold, they add their current Racial Technique die:

TO ANY ROLL

The ability costs no Stamina.

UNWAVERING WILL PROGRESSION

For Humans, advancing a Grade does not change the ability's activation condition.

Instead, it increases the die added to rolls.

RACIAL TECHNIQUE GRADE	EFFECT
d6	at 25% HP or less, add **d6** to any roll
d8	at 25% HP or less, add **d8** to any roll
d10	at 25% HP or less, add **d10** to any roll
d12	at 25% HP or less, add **d12** to any roll
d20	at 25% HP or less, add **d20** to any roll

For other Races, increasing the Racial Technique can instead directly modify or expand how the ability works.

AUTOMATIC ACTIVATION

Unwavering Will does not require:

- **Action**
- **Reaction**
- **Stamina**

or a roll to activate.

When the character's HP reaches the required threshold, the ability takes effect automatically.

If HP rises above 25%, the effect ends.

If it subsequently drops to 25% or less again, it applies again.

CALCULATING 25%

The threshold is calculated using the character's **Maximum HP**.

For example, a Human with:

40 Maximum HP

activates Unwavering Will on reaching:

10 HP OR LESS

With:

11 HP

the ability is not yet active.

With:

10 HP

it takes effect.

ANY ROLL

When Unwavering Will is active, its die can be added to rolls made by the character.

This includes, where appropriate:

- **Skill checks**
- **attacks**
- **Techniques**
- **Active Defence**

and other rolls required by the rules.

The racial die does not replace the dice normally used.

It is added to the roll.

EXAMPLE

A Human has:

- **d10 Technique**
- **d8 Acrobatics**

and has developed:

d12 Unwavering Will

Normally, their Dodge uses:

D10 + D8

However, if they are at 25% Maximum HP or less, they roll:

D10 + D8 + D12

When the character is on the ropes, their racial ability therefore becomes extremely significant.

RACIAL ATTRIBUTE AND RACIAL TECHNIQUE ARE DISTINCT

It is important not to confuse the two values.

A Human can have, for example:

Racial Attribute: d10 Technique

e:

d8 Unwavering Will

These are two separate progressions.

The **Racial Attribute** affects normal checks and Passive Defence.

The **Racial Technique** instead determines Unwavering Will's power.

Both can grow, but do so separately through the investments specified by the system.

NO RACIAL DISADVANTAGE

The Human has:

NO RACIAL DISADVANTAGE

Naturally, they can suffer conditions, penalties and Disadvantage like any other character.

Choosing the Human Race simply does not introduce a specific permanent weakness.

VERSATILITY

Being able to choose the Racial Attribute freely lets the Human adapt to practically any build.

They can choose:

- **d8 Strength** for a physical foundation,
- **d8 Technique** for precision and mobility,
- **d8 Spirit** for willpower and presence,

or:

d8 Cunning for a more strategic build.

Race therefore does not decide what kind of pirate they become.

It provides a flexible foundation and an ability that becomes increasingly dangerous when the character is pushed to the limit.

3.3 · FISH-MAN / MERMAN

Fish-Men and **Mermen** are creatures perfectly adapted to aquatic life.

Their physique makes them naturally stronger than humans and, once submerged, the sea becomes their true domain.

This superiority comes at a price: away from water and in particularly arid environments, their body loses some of its effectiveness.

RACE SHEET

Racial Attribute: Strength
Racial Attribute Grade: d8
Starting HP: 16
Hit Die: d8
Movement: 10 m
Movement in water: 20 m
Racial Technique: Abyssal Dominion
Starting Racial Technique Grade: d6
Disadvantage: Disadvantage on every roll on arid land

RACIAL ATTRIBUTE

The Fish-Man / Merman's Racial Attribute is:

D8 STRENGTH

It is not chosen by the player.

It represents this Race's superior natural physical power.

As the Racial Attribute, Strength is also used to determine **Passive Defence**.

At creation:

d8 Strength

produces:

PASSIVE DEFENCE 9

If Strength is subsequently developed through AP, Passive Defence also increases.

HIT POINTS

A Fish-Man / Merman starts with:

16 HP

Their Hit Die is:

D8

At each Upgrade, they therefore increase their Maximum HP by:

+4 HP

For example:

16 → 20 → 24 → 28 → 32...

The Race therefore has greater natural resilience than a Human.

MOVEMENT

On land, base Movement is:

10 M

When the character is in water, they instead use:

20 M

The aquatic value replaces the land value.

It is therefore not additional Displacement.

In water, the character's Movement is directly **20 metres**.

UNDERWATER BREATHING

Fish-Men and Mermen can:

BREATHE UNDERWATER INDEFINITELY

They do not need to make checks or consume resources simply to remain submerged.

This ability is a natural part of **Abyssal Dominion**.

RACIAL TECHNIQUE · ABYSSAL DOMINION

Every Fish-Man / Merman has:

ABYSSAL DOMINION

The Racial Technique starts at:

For Abyssal Dominion, a Fish-Man or Merman is considered in water when their body is actually submerged.

Rain, splashes or simply being wet do not activate the benefits of immersion.

D6

and can be developed through **Ability Points** along the progression:

D6 → D8 → D10 → D12 → D20

When the character is **in water**, they add the current Abyssal Dominion die:

TO EVERY PHYSICAL ROLL

The ability requires no specific activation.

It is a natural consequence of being in their own environment.

ABYSSAL DOMINION PROGRESSION

For a Fish-Man / Merman, the fundamental effect remains the same.

The die added to physical rolls becomes progressively more powerful.

RACIAL TECHNIQUE GRADE	IN WATER
d6	add **d6** to every physical roll
d8	add **d8** to every physical roll
d10	add **d10** to every physical roll
d12	add **d12** to every physical roll
d20	add **d20** to every physical roll

Unlimited underwater breathing remains available regardless of Grade.

WHAT PHYSICAL ROLL MEANS

Abyssal Dominion applies when the character makes a roll directly representing a physical action.

It can therefore contribute, where appropriate, to checks such as:

forcing, swimming, grappling, moving, physically resisting, striking or performing bodily manoeuvres.

The Game Master determines whether the roll in question is actually physical.

A purely intellectual or social check does not automatically receive the racial die simply because the character is in water.

EXAMPLE

A Fish-Man is underwater and has:

- **d10 Strength**
- **d8 Athletics**
- **d8 Abyssal Dominion**

They attempt a physical check using:

Strength + Athletics

Normally they would roll:

d10 + d8

Being in water, they add Abyssal Dominion:

D10 + D8 + D8

ABYSSAL DOMINION AND ACTIVE DEFENCE

If Active Defence represents a physical action and is performed in water, Abyssal Dominion can be added to the roll.

For example, Active Defence based on:

Strength + Athletics

can benefit from the racial ability when the conditions are appropriate.

The same principle applies to a physical Dodge performed in water.

Abyssal Dominion does not, however, directly modify **Passive Defence**.

ARID LAND

Extreme adaptation to water also creates the Race's main weakness.

When a Fish-Man / Merman is on:

Arid land means an environment that is truly desert-like, severely dehydrated or characterised by extreme heat and dryness.

Ordinary dry ground is not automatically considered arid land.

ARID LAND

they suffer:

DISADVANTAGE ON EVERY ROLL

The penalty does not concern only physical actions.

The specific racial rule states **every roll**.

While the environmental condition persists, the character therefore rolls with Disadvantage whenever a check is required.

WATER AND LAND ARE TWO EXTREMES

The Race therefore has a very pronounced characteristic.

In water:

Movement 20 m, unlimited breathing and Racial Die added to physical rolls.

On arid land:

Disadvantage on every roll.

Outside these specific conditions, the character uses their characteristics normally.

RACIAL ATTRIBUTE AND RACIAL TECHNIQUE

Here too, you must distinguish:

d8 Strength

is the starting Racial Attribute.

d6 Abyssal Dominion

is instead the starting Racial Technique.

They can grow separately.

For example, a character could reach:

d12 Strength

but still have:

d8 Abyssal Dominion

or develop their racial ability more than their Strength.

3.4 · GIANT

Giants have strength and physical mass beyond the normal scale.

Their build directly changes how they interact with the environment: lifting, demolishing, restraining or moving something becomes much easier when the size difference actually comes into play.

The same mass also makes every blow particularly devastating.

RACE SHEET

Racial Attribute: Strength
Racial Attribute Grade: d10
Starting HP: 22
Hit Die: d10
Movement: 14 m
Racial Technique: Colossal Scale
Starting Racial Technique Grade: d6
Limitation: does not normally use standard-sized ships and buildings

RACIAL ATTRIBUTE

The Giant's Racial Attribute is:

D10 STRENGTH

It is therefore one of the Races starting with the highest racial Grade.

This represents the natural physical power resulting from their enormous build.

Because Strength is their Racial Attribute, it also determines **Passive Defence**.

At creation:

d10 Strength

produces:

PASSIVE DEFENCE 11

HIT POINTS

A Giant starts with:

22 HP

Their Hit Die is:

D10

At each Upgrade, they therefore increase their Maximum HP by:

+5 HP

For example:

22 → 27 → 32 → 37 → 42...

The Giant therefore has one of the highest resilience progressions among the Races.

MOVEMENT

Giant base Movement is:

14 M

Their long stride naturally lets them cover more ground than most other Races.

This value represents their normal Movement and requires no special ability.

RACIAL TECHNIQUE · COLOSSAL SCALE

Every Giant has:

COLOSSAL SCALE

The Racial Technique starts at:

D6

and can be developed through AP along the progression:

D6 → D8 → D10 → D12 → D20

Colossal Scale has two distinct effects.

WHEN SIZE MATTERS

When the Giant's size difference truly provides an advantage, they add their **Racial Die** to the check.

For example, it can come into play when they try to:

- **lift an enormous object**
- **demolish a structure**
- **move something particularly heavy**
- **physically restrain a smaller creature**
- **resist a force depending directly on mass**

The situation must, however, make **size** genuinely relevant.

IT IS NOT ADDED TO ATTACKS

The Colossal Scale die:

IS NOT ADDED TO ATTACK ROLLS

e:

IS NOT DIRECTLY ADDED TO DAMAGE

A Giant therefore does not automatically roll an extra die simply because they are making an attack.

Their greater offensive power is represented by the second part of the ability.

DEVASTATING BLOWS

Whenever a Giant lands an attack:

THE DAMAGE DIE INCREASES BY 1 STEP

Following the normal scale:

d4	→	**d6**
d6	→	**d8**
d8	→	**d10**
d10	→	**d12**
d12	→	**d20**

Thus, for example, an attack that would normally deal:

d8

in a Giant's hands deals:

D10

This effect applies when the blow actually lands.

EXAMPLE

A Giant uses a Technique with:

d10 Damage Die

They hit the target.

Thanks to Colossal Scale, the Damage Die rises one step:

D10 → D12

The bonus does not modify the attack roll.

It modifies damage after the attack succeeds.

COLOSSAL SCALE PROGRESSION

Racial Technique progression increases the die used when **size matters**.

The increase to the Damage Die on hits remains **1 step**.

GRADE	EFFECT
d6	when size matters, add **d6**; successful hits: Damage Die +1 step
d8	when size matters, add **d8**; successful hits: Damage Die +1 step
d10	when size matters, add **d10**; successful hits: Damage Die +1 step
d12	when size matters, add **d12**; successful hits: Damage Die +1 step
d20	when size matters, add **d20**; successful hits: Damage Die +1 step

In this case, progression therefore mainly increases the Giant's ability to exploit their physical scale.

SIZE AND CHECKS

Colossal Scale does not mean that every physical action automatically receives the Racial Die.

The question to ask is:

Is the Giant's size giving them a concrete advantage?

If so, the die can be added.

If size is irrelevant, the character uses Attribute and Skill normally.

This keeps normal **Strength** distinct from the racial ability linked to their scale.

LIMITATION · COLOSSAL SIZE

The same size that makes the Giant extremely powerful creates very concrete problems.

A Giant:

cannot normally use standard-sized ships and buildings

A door, cabin, inn or ship built for humans can simply be too small.

This is not a numerical penalty.

It is a **real physical limitation**.

To accommodate a Giant normally, structures, transport or spaces specially designed for their size may therefore be needed.

ATTRIBUTE AND RACIAL TECHNIQUE

For the Giant too, the two elements remain separate.

They can have, for example:

d12 Strength

e:

d8 Colossal Scale

Strength affects normal checks and Passive Defence.

Colossal Scale instead determines the die added when their enormous size becomes relevant.

3.5 · MINK

Minks are naturally fast and responsive fighters, capable of channelling electricity through their bodies using **Electro**.

Their racial ability also includes **Sulong**, an extremely powerful transformation that temporarily pushes the body beyond its limits, but leaves the character completely drained when it ends.

RACE SHEET

Racial Attribute: Technique
Racial Attribute Grade: d8
Starting HP: 14
Hit Die: d6
Movement: 14 m
Movement in Sulong: 16 m
Racial Technique: Electro + Sulong
Starting Racial Technique Grade: d6
Disadvantage: after Sulong, Stamina drops to 0

RACIAL ATTRIBUTE

The Mink's Racial Attribute is:

D8 TECHNIQUE

It represents speed, coordination and body control.

Because Technique is their Racial Attribute, it also determines **Passive Defence**.

At creation:

d8 Technique

produces:

PASSIVE DEFENCE 9

If Technique increases through AP, Passive Defence also increases.

HIT POINTS

A Mink starts with:

14 HP

Their Hit Die is:

D6

At each Upgrade, they therefore gain:

+3 MAXIMUM HP

For example:

14 → 17 → 20 → 23 → 26...

MOVEMENT

The Mink's normal Movement is:

14 M

When they enter Sulong, Movement becomes:

16 M

This value temporarily replaces normal Movement.

RACIAL TECHNIQUE · ELECTRO + SULONG

The Mink's racial ability has two components:

ELECTRO

e:

SULONG

Both belong to the same Racial Technique.

Its starting Grade is:

D6

and it can grow through AP:

D6 → D8 → D10 → D12 → D20

The part changing most with Grade is **Electro**.

ELECTRO

The Mink can discharge electricity into the target.

Using Electro costs Stamina depending on the Racial Technique's Grade:

Electro d6 and d8	→	**1 ST**
Electro d10 and d12	→	**2 ST**
Electro d20	→	**3 ST**

When Electro is applied, the target can make:

STRENGTH SAVE AGAINST ELECTRO'S THRESHOLD

The Save is made **every turn** while paralysis remains active.

The source does not roll dice. The Threshold is determined by the Electro Racial Technique's Grade according to the following table.

ELECTRO GRADE	STRENGTH THRESHOLD
d6	4
d8	5
d10	6
d12	7
d20	11

The Racial Technique's Grade determines duration and any additional damage.

ELECTRO PROGRESSION

GRADE	COST	EFFECT
d6	**1 ST**	Paralysis for **1 turn**
d8	**1 ST**	Paralysis for **2 turns**
d10	**2 ST**	Paralysis for **3 turns**
d12	**2 ST**	Paralysis for **3 turns** + **1d6 damage per turn**
d20	**3 ST**	Paralysis for **3 turns** + **1d8 damage per turn**

On each turn affected by the effect, the target can attempt a Strength Save against the Threshold fixed by Electro's Grade at the time of application.

D6 · ELECTRO

In its initial form:

ELECTRO D6

can paralyse the target for:

1 TURN

It costs:

1 ST

The target can attempt the relevant Strength Save.

D8 · ELECTRO

A:

D8

paralysis can last:

2 TURNS

The target can still make the specified Save during the effect.

D10 · ELECTRO

A:

D10

the maximum duration becomes:

3 TURNS

Electro therefore begins to become an extremely significant control ability.

D12 · ELECTRO

A:

D12

Electro is no longer limited to control.

The ability also deals:

1D6 DAMAGE PER TURN

in addition to paralysis lasting up to:

3 turns

D20 · ELECTRO

At the maximum Grade:

D20

Electro maintains paralysis for up to:

3 turns

but periodic damage rises to:

1D8 DAMAGE PER TURN

d20 therefore does not further increase duration.

It makes the discharge far more destructive.

SULONG

ACTIVATING SULONG

To enter Sulong, the Mink must be able to see the moon.

Entering Sulong is free: it requires no Action, Bonus Action, Reaction or Stamina.

Once activated, Sulong lasts for the combat according to the ability's normal rules.

At the end of the transformation, Stamina drops to 0 as specified.

Sulong has no separate usage limit per night. If the Mink subsequently recovers the necessary Stamina and can see the moon again, they can enter Sulong again.

The second component of the racial ability is:

SULONG

When the Mink enters Sulong, for one combat:

ALL THEIR ATTRIBUTES INCREASE BY 1 STEP

and they gain:

ADVANTAGE ON EVERY ROLL

Movement also increases from:

14 m

a:

16 M

Sulong therefore simultaneously modifies mobility, offensive and defensive abilities, and all checks based on Attributes.

INCREASING ATTRIBUTES

During Sulong, every Attribute temporarily rises by:

1 STEP

Following the normal scale:

d4	→	**d6**
d6	→	**d8**
d8	→	**d10**
d10	→	**d12**
d12	→	**d20**

Sulong has no Prestige progression of its own. However, when it temporarily increases an Attribute that already has access to the Prestige scale, that Attribute follows its normal progression.

This temporary increase changes only the die and does not unlock new Prestige Talents or abilities.

EXAMPLE

A Mink has:

d6 Strength
d10 Technique
d4 Spirit
d8 Cunning

During Sulong, these become:

d8 Strength
d12 Technique
d6 Spirit
d10 Cunning

At the end of the transformation, they return to their normal values.

SULONG AND PASSIVE DEFENCE

Because the Mink uses **Technique** as their Racial Attribute, the temporary Technique increase during Sulong can also affect their **Passive Defence**.

For example:

d8 Technique → Passive Defence 9

during Sulong:

d10 Technique → Passive Defence 11

At the end of the transformation, Defence returns to its normal value.

ADVANTAGE ON EVERY ROLL

During Sulong, the Mink has:

ADVANTAGE ON EVERY ROLL

This benefit applies throughout the transformation.

It does not replace the Attribute increase.

The two effects work simultaneously.

Sulong therefore represents more than a numerical increase. It is a true temporary combat mode.

SULONG'S PRICE

When Sulong ends:

THE MINK'S STAMINA DROPS TO 0

regardless of how much Stamina they had before.

For example, if the Mink ends Sulong with:

14 ST

they still drop to:

0 ST

The transformation must therefore be used carefully.

It can completely turn a battle around, but leaves the character without their main resource for Techniques and abilities requiring Stamina.

ELECTRO DURING SULONG

Electro remains available during Sulong.

The transformation does not replace the Mink's electrical ability.

They are two components of the same racial nature and can therefore coexist in the same combat, normally respecting the costs and rules of each ability.

ATTRIBUTE AND RACIAL TECHNIQUE

For the Mink too, you must keep these distinct:

Technique, as the Racial Attribute,

e:

Electro + Sulong, as the Racial Technique.

A Mink could therefore have:

d12 Technique

e:

d8 Electro + Sulong

The first value determines their normal technical ability and Passive Defence.

The second mainly determines **Electro** progression.

3.6 · LUNARIAN

Lunarians are an extremely resilient Race, characterised by their flame and a nature allowing them to alternate between two opposing configurations.

With **Flame ON**, the Lunarian sacrifices offensive precision to become much harder to bring down.

With **Flame OFF**, they instead give up some protection to increase their ability to hit.

The choice therefore becomes a small tactical switch in the middle of battle. 🔥

RACE SHEET

Racial Attribute: Spirit
Racial Attribute Grade: d8
Starting HP: 16
Hit Die: d8
Movement: 10 m
Racial Technique: Immortal Flame
Starting Racial Technique Grade: d6
Disadvantage: Automatic Bounty of 50,000,000 Berry

RACIAL ATTRIBUTE

The Lunarian's Racial Attribute is:

D8 SPIRIT

It represents the Race's extraordinary inner strength and unusual nature.

Because Spirit is their Racial Attribute, it is also used to determine **Passive Defence**.

At creation:

d8 Spirit

produces:

PASSIVE DEFENCE 9

If Spirit is subsequently developed through AP, Passive Defence also increases.

HIT POINTS

A Lunarian starts with:

16 HP

Their Hit Die is:

D8

At each Upgrade, they therefore gain:

+4 MAXIMUM HP

For example:

16 → 20 → 24 → 28 → 32...

MOVEMENT

Lunarian base Movement is:

10 M

Immortal Flame does not directly modify this value.

RACIAL TECHNIQUE · IMMORTAL FLAME

Every Lunarian has:

IMMORTAL FLAME

The Racial Technique starts at:

D6

and grows through AP along the normal scale:

D6 → D8 → D10 → D12 → D20

The ability has two states:

FLAME ON

e:

FLAME OFF

The Lunarian can alternate between them:

1 TIME PER TURN, FREE OF CHARGE

No Stamina expenditure is therefore required to change configuration.

FLAME ON

When the flame is:

ON

the Lunarian enters their defensive configuration.

They suffer:

DISADVANTAGE ON THE ATTACK ROLL

but, in exchange:

reduce the first physical damage taken each round by their Racial Die value

The die used is the current **Immortal Flame** die.

EXAMPLE

A Lunarian has:

d8 Immortal Flame

and is hit by a physical attack during the round.

With Flame ON, they reduce the first physical damage taken using:

D8

Any subsequent physical damage in the same round does not receive this reduction from the ability again.

The protection becomes available again in the following round.

FLAME OFF

When the flame is:

OFF

the Lunarian switches to the offensive configuration.

Their:

PASSIVE DEFENCE DECREASES BY 2

but they can add their **Racial Die**:

TO THE ATTACK ROLL

The die used depends on the Grade reached by Immortal Flame.

EXAMPLE

A Lunarian has:

d8 Spirit

and therefore normally:

Passive Defence 9

With Flame OFF:

PASSIVE DEFENCE 7

If they also have:

d10 Immortal Flame

they add:

D10

to their attack roll as provided by the ability.

IMMORTAL FLAME PROGRESSION

The fundamental effect does not change as Grade increases.

The die used in both defensive and offensive modes becomes increasingly powerful.

GRADE	FLAME ON	FLAME OFF
d6	reduce the first physical damage of the round by **d6**	−2 Passive Defence, add **d6** to the attack roll
d8	reduce the first physical damage of the round by **d8**	−2 Passive Defence, add **d8** to the attack roll
d10	reduce the first physical damage of the round by **d10**	−2 Passive Defence, add **d10** to the attack roll
d12	reduce the first physical damage of the round by **d12**	−2 Passive Defence, add **d12** to the attack roll
d20	reduce the first physical damage of the round by **d20**	−2 Passive Defence, add **d20** to the attack roll

The Racial Technique therefore grows on both sides of the same balance.

The stronger the flame becomes, the greater the protection while it is lit and the greater the offensive potential when it is extinguished.

A TACTICAL CHOICE

Immortal Flame does not grant both benefits simultaneously.

The Lunarian must choose which state they are in.

FLAME ON

Greater resilience

but:

Disadvantage on the attack roll

FLAME OFF

Greater offensive ability

but:

–2 Passive Defence

The player can therefore change configuration during the battle according to the situation.

FLAME ON AND ACTIVE DEFENCE

Flame ON damage reduction is distinct from **Active Defence**.

A Lunarian can normally attempt Active Defence like any other character.

If the attack still hits and deals physical damage, Flame ON can reduce the round's first physical damage according to its rule.

FLAME OFF AND PASSIVE DEFENCE

The penalty of:

–2 PASSIVE DEFENCE

applies directly to the final value.

For example:

Passive Defence 9 → 7

or:

Passive Defence 11 → 9

The penalty persists while the Lunarian remains in Flame OFF.

AUTOMATIC BOUNTY

Being Lunarian carries a consequence not represented by a dice penalty.

The character has:

AUTOMATIC BOUNTY OF 50,000,000 BERRY

From the beginning, the Race is therefore accompanied by a degree of attention and danger that an ordinary character might not yet have attracted.

This is the Lunarian's **racial Disadvantage**.

ATTRIBUTE AND RACIAL TECHNIQUE

As always, the two values grow separately.

A Lunarian could have:

d12 Spirit

but:

d8 Immortal Flame

In this case, their normal Passive Defence would derive from d12 Spirit:

13

while the Flame effects would still use:

d8

With Flame OFF, their Defence would become:

11

and they would add **d8** to the attack roll as specified by the ability.

3.7 · CYBORG

Cyborgs are individuals whose bodies have been modified through implants and mechanical components. Their distinctive feature is not just physical strength, but the ability to turn their body into a customisable technological platform.

A Cyborg can mount Modules with different functions. The number of implants they can accommodate depends on the Grade of their Racial Technique, Mechanical Body.

RACE SHEET

CHARACTERISTIC	VALUE
Racial Attribute	Strength
Starting Attribute Grade	d8
Starting HP	16
Hit Die	d8
Movement	10 m
Racial Technique	Mechanical Body
Starting Technique Grade	d6
Racial Disadvantage	Normal biological healing and Medicine healing do not recover HP.

RACIAL ATTRIBUTE

The Cyborg's Racial Attribute is d8 Strength. It represents the power of their physical structure, reinforced by artificial components.

Strength also determines Passive Defence. At creation:

8 + 1 = 9

If Strength grows through AP, Passive Defence also increases. Its development is separate from Mechanical Body.

HIT POINTS AND HIT DIE

A Cyborg starts with 16 HP and has a d8 Hit Die.

At each Upgrade, they add half the Hit Die's maximum value, gaining +4 Maximum HP.

The progression is:

16 → 20 → 24 → 28 → 32...

The Hit Die is not rolled.

MOVEMENT

Cyborg base Movement is 10 m.

The Race does not automatically grant greater speed. Movement changes can come from Modules or other abilities expressly providing this effect.

RACIAL TECHNIQUE · MECHANICAL BODY

Every Cyborg has d6 Mechanical Body.

Mechanical Body represents the character's level of technological integration and determines two values:

- the maximum number of installed Modules;
- the highest Module Technology Tier the body can support.

Mechanical Body grows through AP along the normal progression:

d6 → d8 → d10 → d12 → d20

MECHANICAL BODY	SLOTS	MAXIMUM TIER
d6	1	d6
d8	2	d8
d10	3	d10
d12	4	d12
d20	5	d20

A Cyborg can install Modules of their Technology Tier or a lower Tier.

Having a free slot does not allow installation of a Module in a higher Tier than Mechanical Body.

Unlocking a new slot does not automatically grant a new Module.

STARTING MODULES

At creation, the Cyborg receives:

2 COMPLETE MODULES

Free

No initial purchase or construction cost.

The two Modules are chosen in the Workshop during pirate management. They can come from the catalogue or be projects agreed with the Game Master.

At creation, Mechanical Body starts at d6, but the Cyborg still receives the two starting Modules provided by the Race. It is therefore important to distinguish owned items from installation capacity: the two free Modules do not automatically increase the number of available slots.

In particular, d6 Mechanical Body provides only one slot. When the Technique reaches d8, there are two slots and the Cyborg can accommodate both starting Modules.

DEVELOPING THE BODY

When Mechanical Body increases in Grade, the Cyborg unlocks new slots.

Slots gained after creation arrive empty: to use them, you must obtain a Module, build it and install it.

Example. A Cyborg has d8 Mechanical Body and two slots. When they develop the Technique to d10, they gain a third slot but do not receive a third Module for free. They must obtain it through play.

Racial progression therefore determines how much the body can be expanded; the Workshop and campaign resources determine which devices expand it.

HOW MODULES WORK

A Module is a mechanical device with a defined function. It can provide physical abilities, utility, combat effects or other applications specified by its project.

Effects are not granted generically by the Cyborg Race: they depend on the Modules actually installed and their rules.

Every project must respect Workshop requirements and agreements with the Game Master. In particular, a Module can have requirements linked to Mechanical Body Grade, operating conditions or its own energy resource.

A Module's passive effects work only while that Module is active. Details of construction, activation, energy and repairs are covered in the Modules and Technology chapter.

DISADVANTAGE · MECHANICAL BODY

A Cyborg's body does not respond to normal biological healing like those of organic Races.

Normal healing through Medicine does not recover a Cyborg's HP.

Short Rest, Long Rest and Galley work normally. An effect directly granting HP recovery also continues to work unless the ability specifies that it acts exclusively through biological processes.

Outside combat, a Mechanic can recover the Cyborg's HP through Field Repair according to the Cyborg Manual's rules.

Recovering HP and repairing a Module are two separate interventions.

ATTRIBUTE AND RACIAL TECHNIQUE

Strength and Mechanical Body are two different progressions.

A Cyborg could have d12 Strength and d8 Mechanical Body.

In this case, they would have Passive Defence 13, but only 2 Module slots.

Likewise, a Cyborg with d8 Strength and d20 Mechanical Body would still have Passive Defence 9, but could accommodate 5 Modules.

Improving Strength does not automatically increase slots, and developing Mechanical Body does not automatically increase Strength.

3.8 · TONTATTA

Tontatta are a tiny Race, but their stature must not deceive you. They can develop surprising strength or rely on precision and speed, exploiting their small bodies to move unnoticed and be difficult to hit on the first attempt.

Their Racial Technique, Little Warrior, enhances these advantages. Small size also entails significant limitations: a hold can become difficult to break, and ordinary equipment can be too large to use.

RACE SHEET

CHARACTERISTIC	VALUE
Racial Attribute	Strength or Technique
Starting Attribute Grade	d8
Starting HP	12
Hit Die	d6
Movement	8 m
Racial Technique	Little Warrior
Starting Technique Grade	d6
Disadvantages	Grapples and equipment of incompatible size

RACIAL ATTRIBUTE

When creating a Tontatta, the player chooses their Racial Attribute from:

Strength or Technique.

The chosen Attribute starts at d8.

The choice also determines which Attribute is used to calculate Passive Defence.

In either case, at creation:

8 + 1 = 9

If the character improves their Racial Attribute through AP, Passive Defence also increases.

This choice allows different Tontatta builds: some specialise in physical power, others in precision and movement control.

HIT POINTS

A Tontatta starts with 12 HP and has a d6 Hit Die.

At each Upgrade, they therefore add +3 Maximum HP without rolling the die.

Their progression is:

12 → 15 → 18 → 21 → 24...

MOVEMENT

Tontatta base Movement is:

8 M

This value represents the distance they can normally travel during their turn.

Little Warrior does not automatically increase Movement expressed in metres. Any abilities granting additional movement follow their own rules.

RACIAL TECHNIQUE · LITTLE WARRIOR

Every Tontatta has Little Warrior, initially at d6.

The Racial Technique neither accumulates nor spends AP. Its Grade is recorded according to developments granted by the GM during the campaign, along the progression:

d6 → d8 → d10 → d12 → d20

Little Warrior has two distinct benefits: an additional die for certain checks and protection against an enemy's first attack.

STEALTH AND MOBILITY

When the Tontatta makes a Stealth check or a Mobility check, they add the current Little Warrior die to the roll.

The racial die is added to the dice normally required by the check: it does not replace them.

EXAMPLE

A Tontatta has:

- d10 Technique
- d8 Stealth
- d8 Little Warrior

When making an appropriate Stealth check, they roll:

D10 + D8 + D8

The final d8 comes from the Racial Technique.

Mobility is not a separate Skill and does not increase Movement: the Tontatta normally travels the 8 metres indicated on their sheet and follows the general Movement

rules. The Little Warrior die is added only when a Check relevant to a mobility manoeuvre is required; no roll is needed to move normally.

LITTLE WARRIOR PROGRESSION

Progression increases the die added to the specified checks. Protection against the first enemy attack remains unchanged.

Grade	Bonus to Stealth or Mobility checks
d6	Add d6
d8	Add d8
d10	Add d10
d12	Add d12
d20	Add d20

Racial Technique Grade is independent of the Racial Attribute.

A Tontatta could therefore have d12 Strength and d8 Little Warrior: the former determines normal Strength checks and Passive Defence, while the latter determines the additional die granted by the ability.

FIRST ENEMY ATTACK WITH DISADVANTAGE

The Tontatta's small stature makes them particularly difficult to target on the first attempt.

The first attack made by each enemy against the Tontatta is made with Disadvantage.

This protection applies automatically: it requires neither Stamina nor activation by the character.

EXAMPLE

Three enemies face a Tontatta.

When the first enemy attacks them for the first time, they roll with Disadvantage. The same applies to the second and third enemies' first attacks.

If one of these opponents attacks the Tontatta again, they do not suffer further Disadvantage from Little Warrior.

The ability therefore concerns each enemy's first attack, not every attack received during combat.

DISADVANTAGE · GRAPPLES

The Tontatta's small size can become a problem when an opponent manages to grab them.

When a Tontatta makes the Strength contest required to escape a Grapple, add +3 to the Strength check result of the opponent restraining them.

The +3 applies only to the contest preventing the Tontatta from escaping. It does not automatically grant a Grapple, does not modify the initial roll needed to grab them and does not apply to checks unrelated to escaping the Grapple.

EXAMPLE

A Tontatta tries to break a Grapple. The Tontatta scores 9 on their Strength check; the opponent scores 7. Due to the Tontatta's racial Disadvantage, the opponent's result becomes 10: the Grapple is maintained.

DISADVANTAGE · EQUIPMENT

The Tontatta cannot use:

weapons and objects of normal or large size.

This limit concerns the physical compatibility of equipment.

A weapon designed for a human does not automatically become usable by a Tontatta, even if the character has an Attribute sufficient to meet its Grade.

The character must therefore use equipment compatible with their size.

Choosing the Race does not automatically grant free miniature versions of objects.

SIZE AND ADVANTAGES

Little Warrior does not generically grant Advantage on all checks or Disadvantage on all enemy attacks.

Its benefits are defined:

- Additional Racial Die on Stealth or Mobility checks.

- Disadvantage on the first attack made by each enemy against the Tontatta.

Small size does not automatically modify Passive Defence, damage or the normal action rules.

CHAPTER 4 ·

ROLES AND STYLES

A crew consists of more than fighters. Some chart the course, some treat the wounded, some keep the ship seaworthy, and some hold the crew together when all seems lost.

In Grand Line Chronicles, Role represents the character's main specialisation. Some Roles include several Styles, allowing a specific path within the same profession to be chosen.

This chapter describes how Roles and Styles work, which Skills are associated with each and how to access their Talents.

4.1 · FIGHTER

The Fighter is a character who has made combat their specialisation. They can rely on their body, blades, ranged weapons or the devastating force of heavy blunt weapons.

Choosing Fighter does not mean automatically gaining all these abilities. The player must select a Style, which determines the Role Skill, Talent path and conditions for using specialist abilities.

CREATING THE FIGHTER

When choosing Fighter as your Main Role, select one of the four available Styles.

STYLE	SPECIALISATION	ROLE SKILL
Striker	Unarmed combat	Athletics or Acrobatics
Swordsman	Blade combat	Athletics
Sniper	Ranged combat	Observation
Crusher	Heavy blunt weapons	Athletics

The Skill associated with the chosen Style starts at d8.

For the Striker, the player chooses only one Skill between Athletics and Acrobatics. They do not receive both at d8.

THE FOUR STYLES

STRIKER

Athletics or Acrobatics

An unarmed fighter specialising in punches, kicks, grapples and close-range combinations.

SWORDSMAN

Athletics

A fighter specialising in blades, cutting techniques and parries.

SNIPER

Observation

A fighter specialising in precision, positioning and ranged attacks.

CRUSHER

Athletics

A fighter who exploits heavy blunt weapons to deal devastating blows and control the battle through impact.

STRIKER · THE BODY AS A WEAPON

The Striker fights without weapons. Their Style is built around unarmed attacks and the possibilities of close combat.

Their Role Skill can be Athletics or Acrobatics, chosen by the player.

This decision determines which Skill starts at d8 and serves as the reference for the Style's Talent requirements.

The Striker can develop abilities such as Flurry, devoted to consecutive attacks, and Lightning Step, linked to rapid movement. The path also includes Talents based on grapples, defence and counterattacks.

Fundamental restriction: Techniques and Talents requiring the Striker Style cannot be applied to attacks made with weapons.

A Technique created for the Striker must respect this identity.

SWORDSMAN · THE WAY OF THE BLADE

The Swordsman specialises in Blade-type weapons.

Their Role Skill is:

d8 Athletics.

The Style includes abilities developing combat with one or more blades, parries and cutting techniques.

Their Talents can modify how the character uses blades, but every effect retains the requirements stated in its description.

Fundamental restriction: a Swordsman Talent requiring a blade cannot be transferred to a blunt weapon, a ranged weapon or an unarmed attack.

Simply owning a sword also does not automatically grant Swordsman Talents: they must be acquired through progression.

SNIPER · PRECISION AND DISTANCE

The Sniper is the Fighter specialising in ranged attacks.

Their Role Skill is:

d8 Observation.

Their path includes Talents related to range, aiming, ambush positions and exploiting battlefield position.

A Sniper can naturally defend or perform physical actions like any other character. Their specialisation, however, applies to attacks meeting the relevant Talent requirements.

Fundamental restriction: Sniper benefits intended for ranged attacks do not automatically transfer to melee blows.

CRUSHER · THE POWER OF IMPACT

The Crusher specialises in heavy blunt weapons.

Their Role Skill is:

d8 Athletics.

The Style is built around particularly powerful blows, controlling balance and exploiting weapon impact.

Among their Talents is Heavy Strike, allowing increased offensive pressure by paying a higher Stamina cost and accepting reduced defensive capabilities during the turn, according to the Grade and description of the Talent owned.

The path also includes abilities related to stability, demolition and shockwaves.

Fundamental restriction: specific Crusher Techniques and Talents require compatible heavy blunt weapons. They cannot be indiscriminately applied to swords, ranged weapons or unarmed attacks.

STYLE AND TECHNIQUES

When a Fighter creates a Technique linked to their Style, they must respect its requirements.

A Striker Technique is designed for unarmed combat; a Crusher Technique for using a heavy blunt weapon.

This does not prevent a character from using other abilities when they meet their requirements. It does mean that choosing a Style does not authorise applying its benefits to any attack.

Every Talent's description specifies how it works, any Stamina costs and the conditions needed to use it.

FIGHTER PROGRESSION

The four Styles follow normal Talent progression.

ASSOCIATED SKILL GRADE	ACCESSIBLE TALENTS
d8	First Grade
d10	Second Grade
d12	Third Grade
d20	Fourth Grade

Developing the Skill makes the corresponding Talents available but does not grant them automatically. The character must acquire them according to Upgrade rules and any prerequisites.

Example: a Sniper with d8 Observation can access first-Grade Sniper Talents. When Observation reaches d10, they also meet the Grade requirement for subsequent Talents.

A Crusher instead uses Athletics as the reference Skill for their path.

FIGHTER AND DUAL ROLE

Fighter can be chosen as the Main or Secondary Role under the normal Dual Role rules.

If acquired as a Secondary Role, it does not automatically grant a new d8 Skill.

To access the chosen Style's Talents, the character must have the required Grade in the associated Skill.

Access to several paths also does not remove individual Style restrictions: a Crusher Talent still requires the specified equipment, even if the character has other Roles.

4.2 · STRIKER

The **Striker** is a Fighter who has turned their body into a weapon. They do not use swords, rifles or hammers: they fight with punches, kicks, grapples and close-range combinations.

Their path develops around three abilities: **attacking multiple times, controlling the opponent and exploiting movement**. At higher Grades, these culminate in *Smash Hit*, a combination of four consecutive blows.

STYLE SHEET

STRIKER

(Fighter · Melee)

Role Skill: Athletics or Acrobatics, your choice. **Starting Skill Grade:** d8**Equipment:** no compatible Arsenal weapon. **Trait:** Bare Hands**Signature:** Breakthrough Strike

BUILDER EFFECTS

The Striker can use Unbalance, Grapple, Breakthrough, Launch, Dash, Leap, Guard, Fury and Crash. They do not have an ordinary Style Area Form.

At creation, the player chooses **d8 Athletics or d8 Acrobatics** as their Role Skill. The chosen Skill determines access to Striker Talent Grades.

TRAIT · BARE HANDS

(Always active · Free)

The Striker fights exclusively unarmed.

No Arsenal weapon is compatible with the Style, including knuckle dusters and improvised weapons.

In exchange, their unarmed attacks are not limited by a weapon Grade requirement: the Striker can use their full Attribute.

The Trait also includes a particular aptitude for grapples and takedowns. This description does not, by itself, introduce an additional numerical bonus: the specific effects are defined by grapple rules and acquired Talents.

SIGNATURE · BREAKTHROUGH STRIKE

Always active · Free · 1 time per turn

When a Striker scores a clean hit with margin +4 using a Style blow, they can trigger Breakthrough Strike at most 1 time per turn. The target becomes Stunned or Off-Balance for 1 turn if they fail the relevant Save: Strength for Stunned, Technique for Off-Balance.

The Threshold's source depends on the blow triggering the Signature:

- Basic unarmed attack: use the current Grade of the Striker Role Skill used for combat.
- Offensive Striker Technique: use the Grade of the Technique producing the clean hit.

The Threshold is then determined normally through the universal Save table (§1.4).

After one activation, further clean hits by the same Striker during that turn do not trigger the Signature again. This restriction concerns only Breakthrough Strike: Constant Pressure and Broken Guard continue to check their own conditions normally.

The Signature applies to Style blows and does not need to be acquired as a Talent. The character can use it from creation.

STRIKER TALENT TREE

Talents unlock according to the Grade of the Role Skill chosen at creation.

REQUIRED GRADE	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Reaching a Grade makes Talents available but does not grant them automatically. Each Talent must be acquired through normal Upgrade progression, respecting any prerequisites.

D8 · DECKHAND

The starting Talents introduce additional attacks, rapid movement and the first control and defence abilities.

FLURRY · BASIC

(1 ST)

Active · Bonus Action · 1 time per turn

After making an unarmed attack, you can spend 1 ST and your Bonus Action to immediately make 1 additional basic unarmed attack. The initial attack can be a basic attack or a compatible offensive Striker Technique performed unarmed. The additional attack granted by Flurry is always a basic attack: the Talent does not grant a second Action with which to freely use another Technique.

Stamina is paid before making the extra attack. If the attack misses, the ST remains spent.

LIGHTNING STEP

(No ST cost indicated)

1 time per turn · During Movement. You can dash towards an enemy without provoking **Reactions caused by movement**. The Talent does not specify additional metres: it does not automatically grant unlimited Movement.

IRON GRIP

Control · No ST cost indicated. When you grab an enemy of your size or smaller, they remain **Restrained** until they succeed on a Strength check opposed by yours. While you restrain them, the target **cannot move away**.

FIGHTER'S GUARD

1 time per battle

When an attack hits you, you can ignore a secondary effect caused by the blow, such as Stunned, Off-Balance or Push. The damage is still taken normally. This Talent does not cancel the attack or automatically reduce HP lost.

D10 · PIRATE

The second Grade allows the Striker to intensify their combinations and exploit consecutive blows to limit the opponent's options.

FLURRY · IMPROVED

(1 + 2 ST; maximum 3 ST)

Prerequisite: Flurry · Basic · Active · Bonus Action · 1 time per turn

You can make up to 2 additional basic unarmed attacks in the same turn. The first extra attack costs 1 ST; if you also want to make the second, pay another 2 ST before attempting it.

The full sequence costs 3 ST. You can stop after the first extra attack and spend only 1 ST. A missed attack consumes the paid ST but does not interrupt the Flurry or prevent you from buying the next attack, provided you have the necessary Stamina.

The limit of 2 extra attacks replaces Flurry · Basic: the versions do not stack.

CONSTANT PRESSURE

(1 time per turn) If you hit the same target **at least twice in your turn**, that target cannot make Reactions against you until the start of your next turn. The Talent rewards successful combinations: it does not trigger if you merely attempted two attacks but landed one.

MOMENTUM

If you moved at least **5 metres in a line towards the target** before hitting, you can push them **3 metres** when the blow lands. The Talent modifies the target's position. It does not automatically add a die to damage.

BROKEN GUARD

(1 time per turn) If you hit the same target **at least twice in the same turn**, the next attack against them before the start of your next turn gains **Advantage**. An ally can also exploit this benefit, provided they are the next to attack that target within the specified time limit. Broken Guard **does not reduce Passive Defence by 2**: its effect is Advantage on the next attack.

D12 · VETERAN

At this Grade, the Striker develops longer combinations and advanced abilities related to counterattacks, grapples and endurance.

FLURRY · MASTERY

(1 + 2 + 3 ST; maximum 6 ST)

Prerequisite: Flurry · Improved · Active · Bonus Action · 1 time per turn

You can make up to 3 additional basic unarmed attacks in the same turn. The first extra attack costs 1 ST, the second 2 ST and the third 3 ST.

The full sequence costs 6 ST. You can voluntarily end it after any extra attack. A missed attack consumes the paid ST but does not interrupt the sequence.

The limit of 3 extra attacks replaces previous versions. With the initial attack and all three extra attacks, you can attempt up to four unarmed attacks in the same turn.

COUNTERBLOW

When you use a compatible Striker attack Technique as Active Defence and your defence result exceeds the enemy attack roll, you also deal the normal Damage Die of the Technique used. A tie neutralises the attack but deals no damage. Counterblow does not grant an additional Reaction or automatically apply the Technique's other offensive effects, unless specific rules apply.

LAUNCH

Prerequisite: Iron Grip. You can throw an enemy you are restraining up to **5 metres**. The target falls **Off-Balance**. If thrown into another enemy, the second also falls Off-Balance and both take **1 Damage Die**. To use Launch, you must already be restraining the target. You cannot automatically apply it to a free, distant enemy.

BREAKING FISTS

Your unarmed blows deal **full damage** against doors, walls, structures and objects. This Talent enhances the Striker's ability to destroy obstacles without weapons. It does not automatically grant the same property against any damage reduction an armoured opponent possesses.

SECOND WIND

(1 time per battle) When you drop below half your HP, you immediately recover:

1D6 ST

Recovery occurs when the Talent's specified condition is met. It does not require the character to be at 0 ST already.

D20 · LEGEND

SUPREME TALENT · SMASH HIT

SMASH HIT

Ultimate · 5 ST · 1 time per battle · Requires the Game Master's permission.

Smash Hit is a total combination against a single target, resolved through four consecutive attack rolls.

All four rolls use: Attribute + Striker Role Skill, with Advantage.

The Role Skill used is the one chosen for the Striker: Athletics or Acrobatics. The same Skill is used as the combination's Damage Die.

Each successful blow contributes to determining the combination's final damage.

COMBINATION OUTCOME

HITS LANDED	FINAL DAMAGE	EFFECT
0	None	None
1	1 Damage Die	None
2	2 Damage Dice	None
3	4 Damage Dice	Stunned
4	6 Damage Dice	Stunned

The Damage Die is the Striker Role Skill die used for Smash Hit. Damage is rolled only once, at the end of the combination.

The four rolls are not four separate normal attacks: they resolve a single combination.

SMASH HIT · SPECIAL RULES

Smash Hit works entirely under its own rules. It does not apply other Techniques, Talents, the Style Signature or weapon effects except what is expressly indicated in its description. The individual combination blows do not trigger Constant Pressure, Broken Guard or Breakthrough Strike.

A Striker with Athletics as their Role Skill uses Athletics for the four rolls and the Damage Die. A Striker with Acrobatics as their Role Skill uses Acrobatics for the same elements. They cannot freely choose the better Skill each time: they use the one governing their Striker path.

Example · d20 Athletics: four rolls with Attribute + Athletics, all with Advantage. With four successes, 6d20 damage and Stunned.

Example · d20 Acrobatics: four rolls with Attribute + Acrobatics, all with Advantage. With four successes, 6d20 damage and Stunned.

FLURRY PROGRESSION

Flurry is the stepped Talent defining the Striker's offensive development.

VERSION	REQUIREMENT	MAXIMUM EXTRAS	PROGRESSIVE COST	MAXIMUM COST
Basic	d8	1	1	1 ST
Improved	d10 + Basic	2	1 + 2	3 ST
Mastery	d12 + Improved	3	1 + 2 + 3	6 ST

The versions do not stack. Each higher Grade replaces the previous limit. Extra attacks are always basic unarmed attacks. The player pays each cost before attempting the corresponding attack and can voluntarily stop the sequence at any time. A missed attack does not interrupt Flurry. The entire sequence uses the turn's single Bonus Action and grants no additional main Actions or Bonus Actions.

4.3 · SWORDSMAN

The **Swordsman** is a Fighter specialising in blades. Their strength depends not only on the sword's quality, but on the ability to control every movement: attacking, maintaining guard, intercepting an enemy and finding the exact moment to strike.

Their path develops two-sword combat, perfects parries and turns melee Techniques into slashes capable of reaching more distant targets.

STYLE SHEET

SWORDSMAN

(Fighter · Blades)

Role Skill: Athletics**Starting Grade:** d8**Equipment:** compatible Blade-type weapons**Trait:** The Guard**Signature:** Double Slash

BUILDER EFFECTS

The Swordsman can use Laceration, Dash, Leap, Guard, Aim, Chain and All or Nothing. They can also build Close Area (d8, 2 ST): a circle centred on themselves, with a radius equal to the blade's effective Reach and no Range. Ranged areas require an ability expressly granting them.

The Swordsman uses **Athletics** as the reference Skill for Talent progression.

Their specialist abilities require blades and do not automatically apply to blunt weapons, ranged weapons or unarmed attacks.

TRAIT · THE GUARD

(Always active · Free)

The Swordsman specialises in **Active Defence**.

Thanks to their mastery, they can also exploit special effects of high-Grade blades when they meet the requirements.

The Trait alone does not grant a numerical Passive Defence bonus: specific benefits are those provided by weapon rules and acquired Talents.

SIGNATURE · DOUBLE SLASH

(Always active · Free)

When a Swordsman scores a **clean hit with margin +4**, they roll their Damage Die one additional time and add the result.

EXAMPLE

A Swordsman hits with a katana whose Damage Die is **d10**.

If the blow reaches the margin needed to trigger the Signature, they roll another d10 and add it to the damage.

Double Slash is not a second attack: it is an additional damage die for the already successful blow.

SWORDSMAN TALENT TREE

ROLE SKILL	TIER
d8 Athletics	Deckhand
d10 Athletics	Pirate
d12 Athletics	Veteran
d20 Athletics	Legend

Reaching a Grade makes the corresponding Talents available. The character must still acquire them through Upgrades and respect any prerequisites.

D8 · DECKHAND

This tier introduces sword management, resistance to conditions and refinement of the parry.

MORE SWORDS · BASIC

(Passive) You can carry **up to 2 swords** rather than the normal single weapon granted by the Style. **Note:** at this Grade, you still fight with only one sword at a time. The Talent allows you to own and carry two blades, but does not grant a second attack or yet allow simultaneous use. Fighting with both is unlocked by **More Swords · Improved**.

UNSHAKABLE STANCE

(1 ST)

1 time per turn. When you are about to become **Stunned** or **Off-Balance**, you may spend 1 ST to ignore that condition. The Talent prevents the chosen condition from being applied, but does not automatically cancel the damage from the attack that caused it. It does not make the Swordsman permanently immune to both conditions: the benefit requires using the ability and paying its cost.

PERFECT PARRY

(1 time per combat) When you fail a **Parry**, you may immediately reroll. You must accept the second result, even if it is worse than the first. **Perfect Parry does not automatically cancel an attack:** it grants a second Parry attempt.

CLEAN CUT

(1 time per turn) When one of your blade strikes brings a target **below half their Maximum HP**, the target becomes:

BLEEDING

The Talent activates only when the strike meets this condition. The consequences of Bleeding follow the Conditions rules in the Combat chapter.

D10 · PIRATE

At this Grade, the Swordsman develops fighting with two blades and gains greater control over distance and precision.

MORE SWORDS · IMPROVED

(Free extra attack) Prerequisite: More Swords · Basic · 1 time per turn. After making an attack with one of your swords, you may make **one free extra basic attack with the second blade**. This is the Grade that allows the Swordsman to use both swords in the same turn. The extra attack must be a **basic attack**: it cannot freely be replaced with a Technique until More Swords · Mastery is acquired.

BLADE REACH

(1 ST)

1 time per turn · Reaction. When an enemy enters your melee reach, you may spend **1 ST** and use your **Reaction** to make a basic attack with a sword. The attack is made **before the enemy completes their movement**. The Talent does not grant an additional Reaction: it uses the one normally available to the character.

AIR SLASH

(+1 ST)

By spending **1 additional ST**, one of your melee Swordsman Techniques may reach a target up to:

10 M

The Technique's final damage is **halved, rounding up**. Air Slash therefore extends a melee Technique's reach, but reduces its damage. It does not grant a free new attack or remove any costs of the Technique used.

SHARPENING

(1 ST)

1 time per turn. Before making an attack with a sword, you may spend **1 ST**. For that single attack, treat the **target's Passive Defence as reduced by 2**. The modifier is not permanent and does not apply to allies' attacks. **Example:** if the target has Passive Defence 13, your attack with Sharpening treats it as **11**.

D12 · VETERAN

The Swordsman perfects the use of two blades, develops counterattacks and gains advanced weapon-drawing and weapon-defence techniques.

MORE SWORDS · MASTERY

Prerequisite: More Swords · Improved · 1 time per turn. The extra attack with the second blade granted by More Swords · Improved may be a **Swordsman Technique** instead of a basic attack. The Talent does not add a third attack: it changes what you may use as the extra attack. The chosen Technique retains its requirements and any costs.

COUNTERBLOW

When you use a compatible Swordsman attack Technique as Active Defence and your defence result exceeds the enemy's attack roll, you also deal the normal Damage Die of the Technique used. A tie neutralises the attack but deals no damage. Counterblow does not grant an

additional Reaction and does not automatically apply the Technique's other offensive effects, unless specific rules say otherwise. The Talent does not turn a normal Parry into an attack.

LIGHTNING DRAW

(2 ST)

1 time per combat. If you begin the combat with your blade still sheathed, you may spend **2 ST** to make your first attack **before normal Initiative**. This attack is made with **Advantage**. The ability requires the blade to be sheathed at the start. It does not activate simply by sheathing it again during combat.

RIPOSTE

(1 ST)

Prerequisite: Counterblow. After a successful Active Defence performed with a compatible Swordsman attack Technique, you may spend 1 ST to immediately make a basic attack with the same sword. Riposte grants a separate attack, with its own attack roll and the normal defences, even if Active Defence succeeded with a tie. A tie does not deal Counterblow damage. Riposte does not grant a general Action.

INDESTRUCTIBLE BLADE

(Passive) Your blade cannot **normally be broken or damaged**. It may also Parry weapons of a **higher Grade**. The Talent protects the blade and expands what it can parry, but does not mean that every Parry automatically succeeds.

D20 · LEGEND

SUPREME TALENT · ASURA

ASURA

(Ultimate)

5 ST

Cost

1×

Per combat

Requires the Game Master's permission. Asura concentrates all the Swordsman's ability into **a single strike**. To hit, make one roll consisting of:

TECHNIQUE + TECHNIQUE + WEAPON GRADE

The Technique Attribute die is therefore rolled **twice and added** to the weapon die. Damage depends on the margin achieved over the target's Passive Defence.

ASURA DAMAGE

HIT MARGIN	DAMAGE
+0 / +3	3 Weapon Dice
+4 / +7	4 Weapon Dice
+8 / +11	5 Weapon Dice
+12 or more	6 Weapon Dice

The Weapon Die is the **Grade of the weapon used**.

Asura exception: a margin of 0 still deals 3 Weapon Dice, as shown in the first band of its table. The normal rule that a tie is defended still applies to all other attacks.

EXAMPLE · D12 KATANA

A Swordsman has:

- **d20 Technique**
- **d12 Katana**

When using Asura, their attack roll is:

2D20 + D12

If they exceed the target's Passive Defence by a margin of at least **+12**, they deal:

6D12 DAMAGE

If instead they achieve a margin between +4 and +7, they deal **4d12 damage**.

ASURA'S SPECIAL RULES

Asura operates exclusively according to its own rules. When using it, no other Techniques, Talents, Style Signature or weapon special effects apply, except as written in Asura's description.

In particular, **Double Slash does not add an additional Damage Die**, even when Asura reaches a margin of +4.

The damage increase based on the margin is already part of Asura's effect.

PROGRESSION · MORE SWORDS

More Swords is the stepped path that develops fighting with two blades.

VERSION	GRADE	EFFECT
Basic	d8	You may carry up to 2 swords, but fight with one at a time.
Improved	d10	One free extra basic attack with the second blade, 1 time per turn.
Mastery	d12	The extra attack with the second blade may become a Swordsman Technique.

Later versions require the previous ones.

Improved and Mastery do not grant two separate extra attacks: Mastery upgrades the extra attack already obtained with Improved.

4.4 · SNIPER

The Sniper is a Fighter specialising in ranged attacks. They study the battlefield, choose a favourable position and strike targets using range, precision and timing.

Their path allows them to progressively extend weapon range, overcome obstacles to aiming and interfere with enemy actions. At higher Grades, the Sniper can focus a sequence of shots on a single target through the Supreme Talent Lead Storm.

STYLE SHEET

CHARACTERISTIC	VALUE
Role	Fighter
Style	Sniper
Role Skill	Observation
Starting Grade	d8
Specialisation	Ranged attacks
Trait	The Distance
Signature	Exposed Point

BUILDER EFFECTS

The Sniper may use only Dash, Laceration, Aim, Ricochet and Chain. The Technique's range comes from the weapon held; Long Shot and Prestige abilities may exceed it. Ammunition applies its own effects and is not part of the Builder. The Sniper has no ordinary Style Area Form.

Sniper Talents intended for ranged attacks do not automatically apply to melee attacks.

TRAIT · THE DISTANCE

Always active · Free

The Sniper specialises in ranged combat, outside melee, and in anticipating opponents.

The Trait identifies the Style's specialisation but does not itself grant a numerical Initiative bonus. Specific effects on range, aiming and timing are granted by acquired Talents.

SIGNATURE · EXPOSED POINT

Always active · Free

When the Sniper scores a clean hit with a +4 margin, they identify a vulnerable point on the target.

Their next strike against the same enemy treats the target's Passive Defence as reduced by:

−2 PASSIVE DEFENCE

The reduction applies to the Sniper's next strike against that target. It is not a general penalty available to all allies unless the character acquires Hawk's Eye.

Example: a Sniper scores a clean hit against an enemy with Passive Defence 13. Their next strike against the same opponent treats Passive Defence as 11.

SNIPER TALENT TREE

ROLE SKILL	TIER
d8 Observation	Deckhand
d10 Observation	Pirate
d12 Observation	Veteran
d20 Observation	Legend

Reaching the required Grade makes the Talents in the corresponding band available. Each Talent must still be acquired through normal Upgrade progression, meeting its prerequisites.

D8 · DECKHAND

The initial Talents allow the Sniper to improve range, reloading, handling cover and preparing a shot.

LONG SHOT · BASIC

Passive

Increase the effective range of your compatible ranged weapons by one band.

The Talent changes the weapon's range, not the character's Movement.

It does not grant a fixed increase in metres: use the range bands established by the equipment rules.

RAPID RELOAD

1 time per turn

Once per turn, reloading a weapon does not require the main Action: the Talent uses the Bonus Action instead, as established in §10.13.

The Talent removes the Action cost for one reload during the turn. It does not grant additional attacks or automatically remove any special weapon requirements.

STEADY EYE

Passive

You ignore the target's partial cover.

Total cover still normally prevents you from hitting them.

Steady Eye therefore does not allow you to shoot through any obstacle: it removes only the benefit of partial cover.

STAKEOUT

No ST cost specified

If you spend an entire Action without moving to aim at a target, your next ranged attack against them gains Advantage.

The benefit ends when you attack, move or take damage before making the attack.

Example: a Sniper stays still and uses their Action to aim at a Marine officer. If they do not move or take damage before firing, their next ranged attack against that officer has Advantage.

D10 · PIRATE

At this Grade, the Sniper gains tools to control opponents' movement and strike specific targets.

LONG SHOT · IMPROVED

Passive

Prerequisite: Long Shot · Basic.

The effective range of your ranged weapons increases by another band.

This increase adds to the band already obtained with the Basic version.

SHOT FROM THE SHADOWS

No ST cost specified

If you are Hidden and unseen, your first ranged attack before revealing your position gains Advantage.

The Talent requires both conditions: being hidden and not being seen by the target.

It does not guarantee that the character remains hidden after the attack.

TARGETED SHOT

Precision attack

Instead of dealing damage, you may choose a specific target: a held weapon, a leg, a rope, a bolt or another plausible element.

The roll is made against:

PASSIVE DEFENCE +2

If it succeeds, apply the appropriate effect to the chosen target instead of damage.

The concrete consequence depends on what is hit and the situation. Targeted Shot does not also grant the attack's normal damage.

Example: a Sniper wants to strike the weapon held by an enemy with Passive Defence 11. They attack against a threshold of 13. If they succeed, they apply the appropriate effect to the chosen target instead of dealing damage.

COVERING FIRE

1 ST · Action

As an Action, spend 1 ST and choose a zone within your weapon's range.

Until the start of your next turn, the first enemy who moves in the open in that zone may be targeted with a ranged attack using your Reaction.

The Talent therefore requires preparation and an available Reaction. It does not produce an automatic attack against every enemy crossing the zone.

D12 · VETERAN

Advanced Talents allow the Sniper to exploit extreme distances, hinder opponents' actions and achieve particularly complex trajectories.

LONG SHOT · MASTERY

Passive

Prerequisite: Long Shot · Improved.

You may attack at extreme range, as far as a plausible line of sight exists.

This Talent represents the fullest development of the Long Shot path.

Line of sight remains a requirement: Mastery alone does not allow you to strike invisible targets or targets completely hidden behind obstacles.

HAWK'S EYE

Passive

When you score a clean hit with a +4 margin, the –2 Passive Defence reduction granted by the Exposed Point Signature becomes available to anyone attacking that target.

The effect lasts until the end of your next turn.

The normally personal Signature thus becomes an offensive support tool for the entire crew.

ANTICIPATED SHOT

1 time per turn · Reaction

When an enemy you are observing declares an Action, you may attack them as a Reaction, before they complete it.

If your attack hits, the enemy's declared Action is performed with Disadvantage.

Anticipated Shot does not automatically cancel the opponent's Action: it penalises its execution if the Sniper's attack succeeds.

IMPOSSIBLE SHOT

2 ST

By spending 2 ST, you may attempt an attack with an unusual trajectory: a ricochet, a shot through a slit, an angle or a path that reaches a target outside direct line of sight.

A plausible path for the shot must exist.

The Talent does not make projectiles capable of freely passing through walls and solid obstacles.

HELD BREATH

2 ST · 1 time per combat

By spending 2 ST, you prepare your next attack.

If the attack hits, it is automatically considered a clean hit with a +4 margin.

This allows you to activate the Exposed Point Signature without naturally achieving the required margin.

The Talent does not turn a missed attack into a success.

D20 · LEGEND

SUPREME TALENT · LEAD STORM

LEAD STORM

Ultimate

5 ST

Cost

1×

Per combat

Requires the Game Master's permission.

Choose a single target and make three separate attack rolls.

Each roll uses:

Attribute + Weapon Grade

Each successful strike deals 2 Weapon Dice, for a combined maximum of 6 Weapon Dice.

HITS	TOTAL DAMAGE
0	None
1	2 Weapon Dice
2	4 Weapon Dice
3	6 Weapon Dice

Lightning-fast ammunition

Before each of the three shots, you may change projectile type, choosing any compatible ammunition you possess.

The change requires no Action or additional Stamina. The ammunition's effects apply normally.

Surgical precision

Each shot may be directed at a specific point on the target, without giving up the attack's 2 Weapon Dice.

LEAD STORM'S SPECIAL RULES

The Talent operates exclusively according to its own rules.

It does not apply other Techniques, Talents, the Style Signature or weapon special effects, except as expressly stated in Lead Storm's description.

Compatible ammunition effects are an explicitly provided exception and continue to apply.

The three shots are directed at a single target. They cannot freely be distributed among three different enemies.

EXAMPLE

A Sniper uses Lead Storm with a d12 Grade rifle.

They make three separate attack rolls, each with Attribute + d12.

If all three hit, they deal a total of:

6D12 DAMAGE

Before each shot, they may select different compatible ammunition from what they possess, applying its effects normally.

The Exposed Point Signature does not activate during the sequence, since Lead Storm follows its own rules exclusively.

PROGRESSION · LONG SHOT

VERSION	GRADE	EFFECT
Basic	d8	Effective range +1 band
Improved	d10	One additional range band
Mastery	d12	Extreme range, within a plausible line of sight

Each version requires the previous one. The increases from the first two versions are cumulative.

4.5 · CRUSHER

The Crusher is a Fighter specialising in blunt weapons. Maces, hammers, clubs and other impact weapons become tools for breaking down opponents' defences, moving enemies and destroying obstacles.

Their Style follows one principle: every strike must carry weight.

The Crusher may temporarily sacrifice their own defence to increase attack power, or hold a stable position and repel anyone trying to overwhelm them.

STYLE SHEET

CRUSHER

- Fighter · Impact
- Role Skill: Athletics
- Starting Grade: d8
- Equipment: compatible blunt weapons
- Trait: The Weight of Iron
- Signature: Devastating Impact

BUILDER EFFECTS

The Crusher may use Unbalance, Breakthrough, Launch, Guard, Ally Shield, Fury, Crash and Charge. They may also build Close Area (d8, 2 ST): a circle centred on the Crusher, with a radius equal to the blunt weapon's effective Reach and no Range. Wider areas require a Source or special ability.

Crusher Style Techniques may be used only while the character holds and uses a compatible blunt weapon.

They do not apply to bare-handed strikes or attacks with incompatible weapons.

TRAIT · THE WEIGHT OF IRON

Always active · Free

The Crusher knows how to use the inertia of blunt weapons, such as maces, hammers, clubs, knuckledusters and poles used for impact strikes.

High-Grade blunt weapons may unlock their special effects in the Crusher's hands.

The equipment's actual compatibility is still determined by the Arsenal rules.

The Trait does not automatically increase the Damage Die: specific increases are granted by owned Talents and Techniques.

SIGNATURE · DEVASTATING IMPACT

Always active · Free

When you score a clean hit with a +4 margin using a blunt weapon, the target is:

PUSHED 3 METRES

Signature effect

Devastating Impact does not require acquiring a Talent or incur an additional Stamina cost.

The push does not automatically cause the Off-Balance condition.

CRUSHER TALENT TREE

The Crusher's reference Skill is Athletics.

ATHLETICS	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Talents become available when Athletics reaches the required Grade. They must still be acquired through Upgrades, meeting any prerequisites.

D8 · DECKHAND

HEAVY STRIKE · BASIC

2 ST · 1 time per turn

When attacking with a blunt weapon, you may spend 2 ST to add:

+1 Damage Die

In exchange, your Passive Defence decreases by 3 from the moment you declare the attack until the start of your next turn.

The penalty applies even if the attack misses.

Example: a Crusher with Passive Defence 11 declares Heavy Strike. Their Passive Defence drops to 8 for the stated duration, regardless of the strike's result.

PLANTED FEET

Passive

As long as you do not move voluntarily, enemies' attempts to Push you or make you Off-Balance are made with Disadvantage.

The Talent does not automatically prevent displacement: it makes success harder.

REBOUND BLOW

1 ST · Reaction · 1 time per turn

When an enemy misses you with a melee attack, you may spend 1 ST and use your Reaction to make a basic attack with a blunt weapon.

The Talent requires the enemy's attack to fail. It does not activate when you are hit.

DEMOLISHER

Passive

Your blunt-weapon strikes deal full damage to doors, walls, structures and objects.

You ignore reductions due to the materials' simple hardness.

This effect concerns material obstacles and does not automatically remove creatures' damage reductions.

D10 · PIRATE

HEAVY STRIKE · IMPROVED

2 ST · 1 time per turn

Prerequisite: Heavy Strike · Basic.

When attacking with a blunt weapon, you may spend 2 ST to gain both:

- +1 Damage Die.
- Advantage on the attack roll.

Your Passive Defence decreases by 3 from declaring the attack until the start of your next turn, even if you miss.

This version replaces Heavy Strike · Basic. You cannot combine them to gain two additional Damage Dice.

SHOCK WAVE

2 ST

When you hit an enemy with a blunt weapon, you may spend 2 ST and choose a second opponent within 3 metres of the main target.

The second enemy is pushed 3 metres.

Shock Wave does not automatically grant additional damage to the second target: its stated effect is the push.

GUARD BREAKER

1 time per turn

When you hit an enemy with a blunt weapon, their next Parry or Active Defence, performed before the end of their next turn, is made with Disadvantage.

The Talent does not reduce the target's Passive Defence.

COUNTERWEIGHT

Reaction · 1 time per turn

When you successfully resist an attempt to Push you or make you Off-Balance, you may use your Reaction to push the opponent who attempted it 3 metres.

The ability requires successful resistance. It does not activate if the enemy succeeds in moving you or making you Off-Balance.

D12 · VETERAN

HEAVY STRIKE · MASTERY

2 ST · 1 time per turn

Prerequisite: Heavy Strike · Improved.

When using this version, you gain:

- Advantage on the attack roll.
- +2 Damage Dice.
- If the strike hits, the target falls Off-Balance.

In exchange, your Passive Defence decreases by 5 until your next turn.

This version replaces the previous ones: you do not add together the Basic, Improved and Mastery bonuses.

Example

A Crusher has Passive Defence 13 and uses Heavy Strike · Mastery.

They spend 2 ST, make the roll with Advantage and gain +2 Damage Dice.

Their Passive Defence drops to 8 for the stated duration.

If they hit, the target also falls Off-Balance. If they miss, the defensive penalty remains.

CHAIN IMPACT

Shock Wave upgrade

Prerequisite: Shock Wave.

When using Shock Wave, you may affect up to 3 additional enemies within 3 metres of the main target.

All affected additional enemies are pushed 3 metres.

Chain Impact expands the maximum number of secondary targets without automatically increasing damage.

COUNTERBLOW

Passive. When you use a compatible Crusher attack Technique as Active Defence and your defence result exceeds the enemy's attack roll, you also deal the normal Damage Die of the Technique used. A tie neutralises the attack but deals no damage. Counterblow does not grant an additional Reaction and does not automatically apply the Technique's other offensive effects, unless specific rules say otherwise. The Technique must be compatible with the blunt weapon held.

ABSOLUTE CENTRE OF GRAVITY

Passive

Prerequisite: Planted Feet.

As long as you meet all the following conditions, you cannot be Pushed or made Off-Balance by physical effects:

- You remain conscious.
- You are in contact with the ground.
- You do not move voluntarily.

If any of these conditions ceases to apply, the Talent's protection no longer applies.

Absolute Centre of Gravity represents the perfection of Planted Feet: it does not grant general immunity to any effect or condition.

INTERCEPTION BLOW

Reaction · 1 time per turn

When an enemy enters your reach, you may use your Reaction to make a basic attack with a blunt weapon.

The Talent allows you to intercept an approaching opponent, but does not grant additional Reactions.

D20 · LEGEND

SUPREME TALENT · CATACLYSM

CATACLYSM

Ultimate

5 ST

Cost

1×

Per combat

Requires the Game Master's permission.

Cataclysm is a devastating attack consisting of two consecutive resolutions: a direct impact and a shock wave.

FIRST RESOLUTION · IMPACT

Make an attack against a single target using:

Attribute + Weapon Grade

If the roll hits, the target takes:

4 WEAPON DICE

SECOND RESOLUTION · SHOCK WAVE

Make a new roll:

Attribute + Weapon Grade

Compare the result with the Passive Defence of all targets within 5 metres of the impact point, including the main target.

Each target hit takes:

2 Weapon Dice

They are also pushed 5 metres and fall Off-Balance.

TOTAL DAMAGE

TARGET	DAMAGE
Main target, hit only by the Impact	4 Weapon Dice
Target hit by the Shock Wave	2 Weapon Dice
Main target, hit by both resolutions	6 Weapon Dice

Cataclysm also devastates the surrounding area. Walls, doors, floors, cover and other structures suffer the impact's consequences as appropriate to the situation.

CATACLYSM'S SPECIAL RULES

Cataclysm operates exclusively according to its own rules. It does not apply other Techniques, Talents, the Style Signature or weapon effects, except as stated in its description.

The first roll concerns a single target. The second is compared separately with the Passive Defence of all targets in the stated area.

The main target is included in the Shock Wave: they may therefore suffer both effects, provided both rolls hit them.

EXAMPLE · D12 HAMMER

A Crusher uses Cataclysm with a d12 Grade hammer.

The first attack hits the main target, dealing 4d12 damage.

The second roll hits the same target again and strikes two other enemies within 5 metres of the impact point.

The main target takes another 2d12 damage, for a total of 6d12. The other two enemies take 2d12 damage each.

All targets hit by the Shock Wave are also pushed 5 metres and fall Off-Balance.

PROGRESSION · HEAVY STRIKE

Heavy Strike is the stepped Talent that defines the Crusher's main offensive trade-off.

VERSION	BENEFIT	COST	DEFENSIVE PENALTY
Basic · d8	+1 Damage Die	2 ST	PD −3
Improved · d10	+1 Damage Die, Advantage	2 ST	PD −3
Mastery · d12	+2 Damage Dice, Advantage, Off-Balance on a hit	2 ST	PD −5

All three versions may be used once per turn.

Each higher version requires and replaces the previous one. The defensive penalties do not stack.

The penalty takes effect when the Crusher declares Heavy Strike and still applies if the attack misses.

4.6 · DOCTOR

The Doctor is the crew specialist concerned with health, substances and their applications. They can save a badly injured companion, develop antidotes or turn raw reagents into preparations usable in combat.

When choosing Doctor, you must select one of its three Styles.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Doctor
Role Skill	Medicine
Starting Grade	d8
Available Styles	Infirmary, Toxicologist, Chemist

All three Styles use Medicine to access their Talents.

MEDICINE	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

The Skill's Grade determines which Talents may be acquired. Each Talent must still be obtained through Upgrades, meeting any prerequisites.

4.6.1 · INFIRMARY

Infirmary is the Style dedicated to healing and recovery. Its specialist can stabilise the injured, restore HP and Stamina, perform operations and improve recovery for the entire crew.

TRAIT · THE WARD

Always active · Free

A Doctor specialising in Infirmary has the expertise required to perform true Field Treatments.

A character with Medicine may provide first aid, diagnose an injury, stabilise an injured person and use medical tools and preparations normally.

The ability to directly restore HP through Field Treatment, however, belongs to Infirmary and follows the rules below.

FIELD TREATMENT

Field Treatment represents a quick medical intervention to restore an injured character to operational condition.

- Activation: Action.
- Target: a character you can reach and physically treat.
- Check: Cunning + Medicine.
- Ordinary Threshold: 8.
- Materials: appropriate medical supplies.

To perform Field Treatment, you must physically reach the patient and use the necessary tools. A wall, a closed barrier or another obstacle physically preventing the intervention makes Treatment impossible.

Roll: Cunning + Medicine against Threshold 8.

If the Check succeeds, make a full Medicine roll. The result indicates how many HP the patient recovers.

The roll used to determine recovered HP is not a second success Check: it only quantifies the healing.

Recovery cannot bring the character above their Maximum HP.

Each Field Treatment consumes the dose, preparation or expendable medical supply required for the intervention. A Kit or permanent tool is not consumed, unless its own sheet specifies otherwise.

During a combat, a given character may normally benefit from only one Field Treatment.

A character at 0 HP may receive Field Treatment. If the intervention restores at least 1 HP, they return above 0 HP and regain consciousness.

Cyborgs do not normally recover HP through Medicine and follow the specific rules of the Cyborg Manual.

SIGNATURE · THE STEADY HAND

Always active · Free

When you achieve a margin of at least +4 on the Medicine Check of a successful Field Treatment, the patient also receives both of the following benefits:

- Recovers 1d6 ST.
- Removes one removable negative Condition of their choice.

The Signature uses the margin of the Field Treatment Check, not the subsequent roll that determines recovered HP.

Condition removal follows the Condition and Condition Cause rules in Chapter 6.

D8 TALENTS · DECKHAND

HEALING HERBS

When searching for medical ingredients, add Medicine to the Gathering roll: Cunning + Exploration + Medicine.

RESUSCITATION SPECIALIST

When you successfully stabilise a companion at 0 HP, you also restore 1d4 HP to them.

If recovery brings them above 0 HP, the companion regains consciousness.

This intervention remains Stabilisation and does not count as Field Treatment; it therefore does not consume the patient's normal Field Treatment limit.

SURGEON'S HANDS · BASIC

When your Field Treatment succeeds, add one additional Medicine die to the HP restored.

The additional die modifies only HP recovery: it is not added to the Cunning + Medicine Check used to determine whether the Treatment succeeds.

DIAGNOSIS

As an Action, study a living enemy and make a Medicine check against their Passive Defence. If you succeed, the GM reveals a weakness; the first ally to exploit it in the same

battle rolls with Advantage.

D10 TALENTS · PIRATE

EXPERT RECOVERY

When your Field Treatment succeeds, the patient also recovers 1d6 ST.

Stamina recovery applies after normally resolving the HP restored by the Treatment.

CONSTANT CARE

The same character can benefit from your Field Treatment twice per combat instead of once.

Each operation normally requires its own Action, Check and necessary materials.

SURGEON'S HANDS · IMPROVED

Prerequisite: Surgeon's Hands · Basic

With the same Action, you can perform Field Treatment on two companions you can physically reach.

Resolve the Field Treatment Check and HP recovery separately for each patient.

The necessary materials must be available for both.

Each patient normally uses one of their Field Treatment uses for the battle.

IMMEDIATE INTERVENTION

Reaction · 1 time per combat

When a companion still alive within 5 metres reaches 0 HP, you can use your Reaction to reach them and stabilise them immediately.

The necessary displacement, up to a maximum of 5 metres, is part of the Reaction and does not use your normal Movement.

The route must, however, actually be passable.

You must also be able to physically reach the patient and have sufficient access to perform the operation.

Immediate Intervention is not healing at a distance and does not allow passage through walls, closed doors, impassable grilles or other obstacles that physically prevent treatment.

If you possess Resuscitation Specialist, its recovery of 1d4 HP applies normally.

This Stabilisation does not consume the patient's normal Field Treatment limit.

D12 TALENTS · VETERAN

SURGEON'S HANDS · MASTERY

Prerequisite: Surgeon's Hands · Improved

When your Field Treatment succeeds, you can also remove one removable negative Status from the patient.

The benefit adds to the previous versions of Surgeon's Hands.

Removing the Status does not automatically eliminate a physical, environmental or chemical cause that continues to apply it.

PRESSURE POINTS

1 time per combat, when you hit a living creature in melee, you can inflict Off-Balance in addition to damage. Requires Diagnosis.

READING THE BREATH

Without a roll or Action, recognise the general level of injury of a visible enemy. When they are about to fall, the first ally to attack them that round has Advantage.

OPERATING THEATRE

With sufficient time, adequate light and a clean surface, you can treat physical Persistent Consequences requiring genuine medical intervention, such as:

- Fractures.
- Embedded bullets or foreign bodies.
- Deep wounds.
- Injuries that cannot be resolved by normal Field Treatment.

If the operation's outcome is uncertain, make a Cunning + Medicine check against the Threshold specified by the Consequence.

If the Consequence has no Threshold of its own, the Game Master uses the normal difficulty Thresholds in Chapter 5.

A success removes or improves the Consequence according to its description.

Operating Theatre does not automatically regenerate lost body parts or eliminate diseases, poisons or other conditions requiring different treatment.

SHIP'S DOCTOR

While aboard the ship and in good health, a Short Rest under your supervision doubles the crew's ordinary recovery: HP and ST return to their respective maxima, as with a Long Rest's recovery. This benefit modifies recovery; it does not turn the Short Rest into a Long Rest for abilities expressly requiring the latter. After recovery, those who rested under your supervision also receive 2 additional ST. These can take Current Stamina above the normal maximum and can be spent normally; they do not permanently increase Maximum Stamina.

d20 Supreme Talent · No One Dies Under My Care

NO ONE DIES UNDER MY CARE

- Ultimate
- Cost: 5 ST
- Frequency: 1 time per scene

All allies within 10 metres recover HP equal to twice their Hit Die and are freed from all removable negative Statuses.

A companion at 0 HP gets up with half their Maximum HP.

The Ultimate does not automatically destroy physical restraints, neutralise substances still active or remove Persistent Consequences.

Requirements: the Doctor's Ambition and the Game Master's permission.

4.6.2 · TOXICOLOGIST

The Toxicologist studies poisons, sedatives and antidotes. They can use substances to weaken enemies, neutralise poisoning and prepare the crew for known threats.

TRAIT · THE LABORATORY

Always active · Free

The Toxicologist has specialised expertise in preparing, identifying and using poisons, sedatives and antidotes.

They can extract toxic substances, prepare usable doses and recognise how to administer them correctly.

The Toxicologist's substances do not produce effects freely chosen at the moment of use: each poison, sedative or antidote has its own sheet establishing its Threshold, effect, duration, exposure route and treatment.

DOSES AND EXPOSURE ROUTES

Poisons and sedatives are stored and used in doses.

Each dose has an exposure route stated in its sheet:

- **Wound** — must enter the body through a weapon, needle, dart or another means capable of wounding the target.
- **Contact** — must directly reach skin, mucous membranes or a surface specified by the substance.
- **Inhalation** — the target must breathe the contaminated air.
- **Ingestion** — the target must ingest the substance.

A dose cannot be used through a different route unless its sheet allows it.

A substance's sheet must specify at least:

Name · Category · Exposure route · Threshold · Effect · Duration · Antidote or treatment.

APPLYING A TOXIN

Preparing a dose for administration through a weapon, projectile, dart, food or another carrier normally requires:

Action · Cunning + Medicine · Threshold 8

On a success, the dose is correctly applied and ready to use.

On a failure, the dose is contaminated, dispersed or ineffectively applied and is consumed.

This is the Medicine roll considered by The Right Dose effect.

The Medicine roll does not replace any attack needed to hit the target or the Save against the substance.

If the toxin is applied to a weapon or projectile, the subsequent attack is resolved normally. If it hits and the exposure route is compatible, the target makes the toxin's specified Save.

A missed attack does not automatically consume the dose applied to the weapon or recoverable projectile. The dose remains available until actually administered or until the end of the scene.

When a dose is actually administered, it is consumed regardless of the Save's outcome.

TOXIN POTENCY AND DURATION

Every poison or sedative has its own Threshold.

The Threshold recorded in the substance's sheet is a specific rule and takes precedence over the general table of graded sources. Effective Sedatives, Refined Toxins and similar abilities continue to modify it according to their own text.

Saves use the Attribute specified by the substance. For a normal poison introduced into the body, unless otherwise specified, use Strength against the poison's Threshold, as provided by the Poisoned Status rules.

Effects with a numerical duration must state it in turns, rounds or another precise unit.

A duration expressed as 'until an antidote', 'for the scene' or another condition is not considered a numerical duration.

Repeated applications of the same substance do not automatically stack the same effect: they normally refresh its duration.

Reductions to the same Attribute do not stack. If multiple effects reduce the same Attribute, apply the largest reduction.

No toxin-induced reduction can take an Attribute below d4, unless an ability expressly states otherwise.

CLOUDS, OBSTACLES AND THE ENVIRONMENT

A cloud occupies a real volume.

Walls and closed doors block its spread.

It can reach different floors only through spaces that are actually connected and within its radius.

Strong wind or sufficiently powerful ventilation can disperse the cloud before its specified duration; under clearly sufficient conditions, the Game Master can end it at the end of the current round.

A normal cloud dispersed in air does not work underwater, unless the substance used expressly states otherwise.

PROTECTION AGAINST INHALED SUBSTANCES

An effective Filtering Mask prevents exposure to substances acting exclusively through Inhalation while properly worn and with a working filter.

Simple respiratory protection does not automatically prevent Blinded caused by smoke, irritation or obscured sight.

Protecting the eyes as well requires full protection expressly stating it.

Poison immunity prevents Poisoned and the substance's other toxic effects, but does not automatically grant immunity to a cloud's visual obstruction.

SIGNATURE · THE RIGHT DOSE

Always active · Free

When you obtain a margin of at least +4 on the Medicine Check used to apply a toxin or sedative, you prepare that single dose with particular precision.

If the dose subsequently reaches a target through the correct exposure route, the first Save made against that dose is made with Disadvantage.

The Right Dose does not modify the substance's effects, add Statuses, increase duration or reduce Attributes.

If the dose is not administered before the scene ends, the Signature's benefit ends.

D8 TALENTS · DECKHAND

POISON HUNTER

You gain Advantage on any poison extraction.

EFFECTIVE SEDATIVES

The Threshold of Saves against your sedatives increases by +2.

The benefit applies only to substances classified as Sedatives.

REFINED TOXINS · BASIC

The Threshold of Saves against your poisons increases by +2.

DIPPED BLADE

Bonus Action

You use one dose of your toxin to coat a weapon, ammunition or another compatible carrier.

You normally make the application Check of Cunning + Medicine against Threshold 8, but the operation uses the Bonus Action instead of the Action.

A Technique can be poisoned only if actually executed through a weapon, projectile, needle or another physical means capable of administering the substance.

A punch, shock wave, ranged slash or another Technique without contact with the toxin cannot be poisoned merely because it is called a Technique.

The first compatible hit that lands exposes the target to the toxin and consumes the dose.

If the hit misses, the dose remains on the carrier.

You can keep at most two dipped carriers ready simultaneously per combat.

D10 TALENTS · PIRATE

ANTIDOTE MASTER

Halve the Threshold needed to prepare the antidote to a poison you have identified.

Identifying the substance and preparing its antidote remain two distinct steps.

ACQUIRED IMMUNITY

You are immune to the effects of substances classified as Poison.

You can identify one by taste and handle poisons without suffering their effects.

This immunity does not automatically include:

- Sedatives not also classified as Poison.
- Acids and corrosive substances.
- Diseases.
- Gases producing purely physical effects or obscuring vision.
- Medicines and beneficial preparations.

If a substance also has the Poison category, immunity applies to the toxic component specified in its sheet.

REFINED TOXINS · IMPROVED

Prerequisite: Refined Toxins · Basic

Double the numerical duration of your poisons.

A duration of 2 turns becomes 4 turns; a duration of 3 turns becomes 6.

The Talent does not modify durations expressed as ‘for the scene’, ‘until an antidote is administered’ or other non-numerical conditions.

SLEEP DART

Action · 1 time per combat · Reach 10 m

Use a specially prepared dart and consume a dose of Sedative compatible with Wound exposure.

The dart and the means needed to launch it are part of using the Talent: a separate weapon is not required.

You must have line of fire and a physically clear trajectory to the target.

You do not make a separate attack roll: the target directly makes a Strength Save against the Sedative's Threshold.

If they fail, they become Asleep for a maximum of 10 rounds or until they take damage.

During this duration, they do not automatically repeat the Save at the end of every turn: the Talent's specific rule takes precedence over the Status's general procedure.

The dose is consumed even if the target succeeds on the Save.

Effective Sedatives normally increases the Threshold.

D12 TALENTS · VETERAN

REFINED TOXINS · MASTERY

Prerequisite: Refined Toxins · Improved

When a target fails their Save against your poison, they also lose one step in an Attribute of your choice until receiving an effective antidote.

The Attribute cannot fall below d4.

Repeated applications do not stack further reductions on the same Attribute.

TOXIC CLOUD

Action · 3 ST

Use and consume a prepared dose of Poison compatible with Inhalation exposure.

The Action includes drawing the container and dispersing its contents using a vial, bomb, nebuliser or another appropriate means.

No attack roll is required.

Choose a point you can see within 10 metres that the substance can physically reach. Walls, closed doors and other solid obstacles prevent placing the centre beyond them.

The chosen point generates a cloud with a 5-metre radius lasting 3 turns.

When the cloud appears, all creatures already in the area immediately make a Save.

Subsequently, a creature makes the same Save when:

- It enters the cloud for the first time during its turn.
- It starts its turn inside it.

The Save uses Strength against the consumed poison's Threshold, normally modified by your Talents.

If it fails:

- It becomes Poisoned for the poison's normal duration.
- It becomes Blinded while remaining inside the cloud.

Leaving the area ends the Blindness caused by the cloud, but does not automatically remove Poisoned.

Toxic Cloud uses the consumed dose's Threshold, but does not automatically copy any further special effects of that poison.

The dose is consumed when dispersed.

FINISHING BLOW

Against an already Poisoned target, your attacks deal +1 damage die. If the hit would bring them below half HP, they also suffer Off-Balance. Requires Dipped Blade.

INSTANT ANTIDOTE

Reaction · 1 time per combat · Reach 5 m

When a companion within 5 metres is exposed to poison or suffers a Status caused by a substance you have identified, you can use your Reaction to reach them and immediately administer an appropriate antidote.

You must possess an already prepared antidote dose.

The necessary displacement of up to 5 metres is part of the Reaction, but the route must be passable and you must be able to reach the target physically.

The dose is consumed.

The antidote neutralises the substance it was prepared for and removes Statuses directly caused by it.

Instant Antidote does not create an antidote at the moment of use.

PROPHYLAXIS

Before a mission, you can prepare the crew against a poison or disease you have already identified.

Each treated character requires one dose of the appropriate prophylaxis.

Preparation, materials and cost follow the corresponding antidote or treatment design.

Treatment must be performed before exposure and cannot be improvised retroactively.

For the entire adventure, treated characters are immune to the specific chosen substance or disease.

Prophylaxis does not protect against other poisons, diseases or environmental effects not caused by the treated substance.

D20 SUPREME TALENT · BLACK TIDE

BLACK TIDE

- Ultimate
- Activation: Action
- Cost: 5 ST
- Frequency: 1 time per scene

By consuming a prepared dose of Poison compatible with Inhalation, you release an extraordinary quantity of toxin into the surrounding air.

The substance spreads from your position in a 15-metre radius.

Black Tide is an instantaneous dispersal, not a Persistent Zone.

Walls, closed doors and other solid obstacles prevent the substance from reaching isolated spaces.

All exposed creatures make a Strength Save against the Threshold of the poison used.

Anyone who fails:

- Becomes Poisoned.
- Becomes Off-Balance.
- Loses one step in an Attribute of your choice for the rest of the scene.

The reduction cannot take the Attribute below d4 and does not stack with other reductions to the same Attribute.

Characters previously treated with Prophylaxis against that specific toxin are immune.

Other allies make the Save just like enemies.

Acquired Immunity protects the Toxicologist from the toxic effects of their own Black Tide, but grants no protection to other characters.

Requirements: the Toxicologist's Ambition and the Game Master's permission.

4.6.3 · CHEMIST

The Chemist turns raw reagents into incendiary, acid, smoke and explosive preparations. They can produce substances for field use, modify their effects and develop a true production and trading business.

TRAIT · THE DISTILLERY

Always active · Free

The Chemist possesses the skills needed to turn raw reagents into usable or saleable preparations.

Each preparation is made through an already defined sheet.

The Threshold used to produce it measures preparation difficulty and does not automatically determine the preparation's damage, area or combat potency.

These values must be specified in its sheet before production.

PREPARATION SHEET

Every preparation usable in play must list:

- Name.
- Family — Incendiary, Acid, Smoke, Explosive or another specified category.
- Use — Target, Area, Contact, Charge or other.
- Reach.
- Initial damage, if present.
- Area, if present.
- Save, if present.
- Effect or Status.
- Duration.
- Preparation Threshold.
- Preparation time.
- Materials.
- Doses produced.

A preparation does not derive combat values from its manufacturing Threshold.

If a Catalogue entry gives only descriptions such as 'damage in a small area' or 'major structural damage', it must be completed with numerical values before use.

USING A PREPARATION

Using a preparation normally consumes one dose.

Unless stated otherwise, it requires an Action.

A throwable preparation has an ordinary reach of 10 metres.

Direct-target preparation: make a Technique + Medicine check against the target's Passive Defence, unless the sheet specifies a different formula.

If the attack misses, the thrown dose is still consumed.

Area preparation: choose a visible, reachable point within Reach. You do not make an attack roll; targets in the Area instead resolve the Save specified by the preparation.

Walls and solid obstacles normally block an Area's spread.

All creatures in the Area are affected, including allies, unless an ability expressly allows them to be excluded.

SIGNATURE · THE REACTION SPREADS

Always active · Free

When you obtain a margin of at least +4 on a preparation's preparation Check, choose one of the following benefits.

Spread. If the preparation was offensive and intended for one target, it becomes an Area preparation with a circle of 3-metre radius.

The origin point remains the one normally specified by the preparation.

Having become an Area effect:

- Targets take half the normal damage.
- Statuses and other effects providing for it grant the normal Save.

Spread does not apply to preparations already covering an Area, antidotes, tonics, contact tools or charges to be placed.

Additional Production. Gain a second identical dose of the preparation without consuming additional ingredients.

The additional dose is produced at the same time as the original dose and has the same sheet.

The choice is made at the end of the preparation Check.

D8 TALENTS · DECKHAND

REACTIVE REAGENTS

You can produce the reserved preparation families: incendiary, acid, smoke and explosive.

IMPROVISATION

You can replace a missing ingredient with a consistent makeshift material.

The preparation Threshold increases by +2.

The substitute material is consumed normally.

Improvisation does not allow unique components or ingredients declared indispensable by the design to be replaced.

VIOLENT REACTIONS · BASIC

When your offensive preparation has a base Damage Die, add one further die of the same type to its initial damage.

Example: 1d8 preparation → 2d8.

The Talent does not create damage on a preparation without a base Damage Die.

PRECISE THROW

The reach of your throwable preparations increases from 10 to 15 metres.

When using an Area preparation, you can exclude a number of creatures equal to half the maximum value of your Medicine die, rounded down.

Example:

- Medicine d8 → up to 4 creatures excluded.
- Medicine d12 → up to 6.

The Talent modifies reach and target selection; it does not add an attack roll to a preparation normally using only a Save.

D10 TALENTS · PIRATE

EFFICIENT DISTILLER

Reduce the time needed to prepare a dose by 25%, rounding up to the work unit used.

You can also work on two preparations simultaneously in the same work block.

Each preparation:

- Requires its own materials.
- Retains its own Threshold.
- Makes its preparation Check separately.

If the two preparations take different times, the block ends when the longer one is complete.

ON COMMISSION

You can organise production of identical preparations in batches.

A batch can contain up to 3 doses of the same preparation.

You must possess and consume the full materials for each dose.

The total time is:

- 1 dose → normal time.
- 2 doses → ×1.5 normal time.
- 3 doses → ×2 normal time.

Make a separate preparation Check for each dose.

When selling personally produced preparations in a market with real demand, their commercial value increases by 20% before normal negotiation.

The Talent does not automatically guarantee buyers or remove normal market conditions.

VIOLENT REACTIONS · IMPROVED

Prerequisite: Violent Reactions · Basic

Double the radius of your preparations that already have an Area.

A 3-metre radius becomes 6 metres.

A preparation without an Area does not automatically gain one.

If The Reaction Spreads has turned a single-target preparation into a 3-metre-radius Area, Violent Reactions · Improved can increase it to 6 metres.

The Talent does not double throwing Reach.

MIX ON THE FLY

Action · 2 ST · maximum 2 times per combat

Choose a preparation you know and possess all the ingredients needed for one dose of.

Immediately consume the materials and make the normal preparation Check against the preparation's Threshold.

Success: produce a dose with all the characteristics already recorded in its sheet.

Failure: the dose is not produced; materials and ST remain consumed.

Mix on the Fly replaces normal preparation time, but does not modify the preparation's Threshold, ingredients or statistics.

The Action used produces the dose: it does not automatically use it.

To throw, apply or place it, you must subsequently use the normally required Action.

The dose must be used before the end of the scene.

D12 TALENTS · VETERAN

VIOLENT REACTIONS · MASTERY

Prerequisite: Violent Reactions · Improved

Your offensive preparations also apply an additional effect linked to their family.

- **Incendiary — Burn.** The target loses 1d4 HP at the start of their next 2 turns. They can use an Action and an appropriate means to extinguish the flames. Repeated applications refresh the duration but do not stack periodic damage.
- **Acid — Corrosion.** Passive Defence –2 for 2 turns. Multiple applications do not stack the penalty. Suitable neutralisation can end it early.

- **Smoke — Blinded.** The target becomes Blinded until the end of their next turn. If the preparation creates a persistent smoke zone, Blinded instead lasts while the target remains in the zone, according to the preparation's sheet.
- **Explosive — Off-Balance.** The target suffers Off-Balance according to the normal Status rules.

When the preparation already grants a Save, that same Save also determines application of the Mastery effect.

If it has no Save, use the one provided by the applied Status.

TIMED TRIGGER

You can prepare and arm explosive charges with different activation systems.

Placing and arming a charge: Action.

When placing it, choose one of the following triggers:

- **Timer** — establish when it will detonate. In combat, state the exact round.
- **Contact** — detonates when pressed, struck or activated according to the established method.
- **Pull** — detonates when a wire, safety pin or connection is removed.
- **Manual** — you can detonate it using your Reaction while within 30 metres and while the detonator remains functional.

Programming the trigger is part of the same Action used to place the charge.

You can keep a maximum of two charges armed simultaneously.

A creature physically reaching a charge can attempt to disarm it using an Action and an appropriate Cunning + Mechanics or Cunning + Medicine Check, depending on trigger type, against the charge's preparation Threshold.

A failure leaves the charge active, unless the operation physically activated its trigger.

BREACHING CHARGE

When placing an explosive directly against a structure, you can use it as a Breaching Charge.

Against a structure with Structure Points, the charge deals its normal structural damage, and SP are reduced normally.

During a naval battle, you can instead place it directly on a reachable Module of the enemy ship.

In this case, when placing it choose whether to strike:

- **The hull** — damage is normally deducted from the ship's SP.
- **The Module** — damage is not also deducted from the ship's SP. If the charge produces at least 1 effective damage after any protection, an Intact Module becomes Damaged. An already Damaged Module becomes Destroyed.

A single Breaching Charge does not automatically destroy an Intact Module.

MOBILE WORKSHOP

You can produce preparations even without a distillery, working in improvised locations without penalties.

POWDER MERCHANT

You have port contacts to obtain rare reagents and find buyers for your batches, including illegal ones. Requires On Commission.

D20 SUPREME TALENT · CHAIN REACTION

CHAIN REACTION

- Ultimate
- Activation: Action
- Cost: 5 ST
- Frequency: 1 time per scene

Choose up to 5 of your detonatable preparations already placed and still present within 15 metres of you.

They must be explosives, incendiaries or other preparations whose sheets actually allow detonation.

Antidotes, tonics, simple acid doses, spent smoke preparations and other objects without a compatible trigger cannot be chosen.

All chosen preparations detonate simultaneously from their actual positions.

Each preparation retains:

- Its own damage.
- Its own Area.
- Its own Threshold.
- Its own Statuses.
- Its own effects.

There is no single Save for the entire Ultimate: each affected creature resolves the normal defences and Saves of preparations reaching it.

A creature can be reached by multiple detonations and take their respective damage. Copies of the same Status do not stack beyond the normal rules.

Allies in the Areas are hit normally. Chain Reaction does not automatically distinguish friends from enemies.

The ability does not place new preparations or create doses for free: everything that explodes must have actually been prepared and distributed before activation.

Requirements: the Chemist's Ambition and the Game Master's permission.

4.7 · COOK

A crew can survive a battle, but without supplies and proper meals it will not get far. The Cook turns ingredients gathered during the voyage into dishes capable of restoring energy and preparing companions for the challenges ahead.

Their specialisation is not cooking during a battle, but preparing, preserving and serving food at the right moment.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Cook
Role Skill	Cooking
Starting Grade	d8
Trait	The Heart and the Engine
Signature	The Pinnacle
Path	Single

The Cook uses Cooking as the reference Skill for accessing their Talents.

TRAIT · THE HEART AND THE ENGINE

Free · Always active

The Cook is the specialist who enables the crew to tackle particularly complex food preparations.

They can make the Catalogue's ambitious dishes, with Threshold 10–12, which are not accessible to those without this specialisation.

The Trait does not guarantee successful preparation: the normal Cooking roll must still be made to determine the outcome.

SIGNATURE · THE PINNACLE

Free · Always active

When you achieve a Critical with margin +4 on a Cooking roll, the dish becomes a masterpiece.

The dish performs at its best, and its Catalogue Category Bonus also activates.

The Signature is tied to preparing dishes, not attacks made by the character.

TALENT TREE

COOKING GRADE	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Talents become available when Cooking reaches the required Grade, but must be acquired through Upgrades.

D8 · DECKHAND

The first Talents improve ingredient gathering, reduce the consequences of failed preparations and allow you to serve a meal during a fight.

COOK'S PANTRY

Passive

When you search or fish for ingredients, add your Cooking Die to the roll.

This benefit applies to obtaining ingredients, not to every exploration Check.

NEVER ON AN EMPTY STOMACH

Passive

Your dishes never fail completely.

When a preparation would fail, the dish still produces the effects of a Strained result.

This does not turn the failure into a Critical result or automatically trigger the category Bonus.

COOK'S HAND · BASIC

Passive

Your dishes restore +1 die of the resource they normally recover.

If a dish restores HP, add one die to its HP recovery. If it restores Stamina, add one die to its Stamina recovery.

The Talent does not automatically turn a dish that restores HP into one that also restores ST.

If a recipe restores both HP and ST, choose one of the two resources when preparing it: Cook's Hand · Basic adds its die only to that resource.

BATTLEFIELD SERVICE

Action · Conscious target within 5 metres

Serve an already prepared portion to a conscious companion within 5 metres.

Delivery and consumption are part of the Cook's same Action.

The recipient does not spend their own Action.

This ability does not include any Displacement by the Cook: the target must already be within 5 metres.

There must also be a physically possible way to deliver the food; a closed wall or another impassable obstacle prevents service.

The recipient must be conscious and physically able to eat or drink.

An Unconscious character cannot receive the benefits of a normal meal through this ability.

D10 · PIRATE

The Cook gains greater control over preparation results and can feed more companions in less time.

BATTLE COOK

Passive

A dish's category Bonus is triggered by an ordinary Success, without requiring a Critical result.

The other effects of the result follow the Cooking rules as normal.

SPECIALITY

Passive

Choose a dish from the Catalogue as your speciality.

When you prepare that dish, its Threshold is reduced by 2.

This benefit applies to the chosen dish and does not automatically extend to every recipe in the same category.

COOK'S HAND · IMPROVED

Prerequisite: Cook's Hand · Basic

One of your dishes can feed two companions instead of one.

The preparation result applies to both, who receive the dish's specified effects.

This version increases the number of recipients: it does not add another recovery die beyond the one already granted by the Basic version.

EXPRESS COOKING

Accelerated preparation

You can prepare a dish during a short break without necessarily using an entire work block.

The Talent reduces the time needed, but does not remove the recipe's ingredient requirements.

D12 · VETERAN

The Cook becomes able to support the entire crew, intervene at critical moments and prepare meals even away from the ship's kitchen.

COOK'S HAND · MASTERY

Prerequisite: Cook's Hand · Improved

Your dishes also remove one removable negative Status from whoever consumes them.

A meal does not automatically remove a physical, environmental or chemical cause that continues to apply the Status.

SECOND FIRE

- 1×/combat
- Reaction · Target within 5 m

When a companion within 5 metres falls below half their HP, you can use your Reaction to throw them a ration.

The companion immediately recovers:

1D6 ST

Second Fire does not restore HP and cannot be used more than once in the same combat.

WAR BANQUET

Preparation before combat

Before a combat you have had the opportunity to prepare for, you can cook for the entire crew.

The preparation result applies to every companion who sits down to eat.

The Talent extends the result to the whole crew without requiring a separate preparation for each member.

THE COUNTER

Passive

A fire and a work surface are enough for you to set up a field kitchen.

You can prepare dishes outside the ship's kitchen too, without penalties for lacking the usual equipment.

The required ingredients remain necessary.

STOLEN RECIPE

Passive

You only need to taste a dish once to learn how to reproduce it.

The recipe enters your repertoire and you can prepare it again using the necessary ingredients.

D20 · LEGEND

SUPREME TALENT · THE LEGENDARY BANQUET

THE LEGENDARY BANQUET

- Ultimate
- Once per adventure

The Cook prepares a banquet destined to become part of the crew's history.

Using it requires hours of preparation, real ingredients and a crew that sits down at the table.

No Cooking roll is required: the result is automatically treated as Critical for every companion who takes part.

BANQUET EFFECTS

All participants receive the dish's effects as though it had been prepared with a Critical result.

HP and Stamina recovery is doubled.

Furthermore, until the end of the adventure, every participant receives:

+2 ST
Maximum Stamina

1 HP
Surviving the first fatal blow

The first blow that would reduce a participant to 0 HP instead leaves them at 1 HP.

This protection applies once to each character who ate at the banquet.

Requirements: the Cook's Ambition and the Game Master's permission.

The Legendary Banquet cannot be activated instantly during combat. It requires actual preparation and affects only the characters who take part in the meal.

PROGRESSION · COOK'S HAND

Cook's Hand is the Role's step-based progression path.

VERSION	GRADE	EFFECT
Basic	d8	+1 die to the resource recovered by the dish.
Improved	d10	One dish can feed 2 companions.
Mastery	d12	The dish also removes one removable negative Status.

Each version requires the previous one. Unlike Talents that replace an ability with a higher version, Cook's Hand progressively expands the dish's benefits.

EXAMPLE · THE MEAL BEFORE BOARDING

A Cook has Cooking d12 and has acquired Cook's Hand · Mastery and War Banquet.

Before attacking a Navy ship, they prepare a dish for the crew.

Thanks to War Banquet, the preparation result applies to all companions who eat. Cook's Hand increases any recovery provided by the dish by one die and also allows one removable negative Status to be removed from its recipients.

If the Cook also has Battle Cook, the category Bonus is triggered by an ordinary Success.

4.8 · NAVIGATOR

The Navigator turns a dangerous voyage into a navigable route. They study the weather, read currents, interpret nautical charts and guide the ship through seas that would challenge any other crew.

Their specialisation is not limited to travel. During a naval battle, an experienced Navigator can anticipate cannon fire, exploit weather conditions and bring the ship into positions the enemy did not expect.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Navigator
Role Skill	Navigation
Starting Grade	d8
Path	Single
Trait	The Road Across the Sea
Signature	Perfect Course

Navigation determines access to the Role's Talents and contributes to crossing Checks and the manoeuvres specified by their abilities.

TRAIT · THE ROAD ACROSS THE SEA

Always active · Free

The Navigator specialises in sea crossings. Their expertise allows them to contribute directly to the rolls that determine the voyage's progress, turning knowledge of the sea into additional dice.

The specific ways in which they add Navigation to Checks are defined by the Talents and crossing rules.

SIGNATURE · PERFECT COURSE

Always active · Free

When you achieve a margin of at least +4 on a Navigation Check related to a crossing, you find a particularly favourable route.

You gain both of the following benefits:

Prepared course. Until the destination is reached, the crew keeps 1d6 of Course. Before making a Check directly related to the same crossing, the Navigator can consume this die and add it to the Check.
For example, this could involve:

- Overcoming a current.
- Facing a stretch of storm.
- Avoiding a shoal.
- Staying on course during an unexpected event.
- Making another crossing Check required by the voyage.

The die must be declared before the roll.

Only one Perfect Course can be kept at a time. Gaining the Signature again before using the die replaces the previous one.

Anticipated danger. The Game Master also reveals a real danger further along the route, if there is one that the course could reasonably allow you to foresee.
If the entire crossing is resolved with a single Check and no further Checks are required before arrival, the Course Die simply goes unused. The Signature's informational benefit still applies.

TALENT TREE

NAVIGATION GRADE	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Talents become available on reaching the required Grade, but must be acquired through Upgrades, observing any prerequisites.

D8 · DECKHAND

These Talents introduce navigation's fundamental benefits: steering the ship, interpreting the weather, avoiding attacks and handling dangerous shallows.

HAND ON THE HELM

Passive

When you are at the helm, add your Navigation Die to the crossing roll.

The combination becomes:

SAILS + CUNNING + NAVIGATION

The Talent applies when you personally steer the ship.

EYE OF THE SKY

Passive

Make Checks to forecast weather conditions with Advantage.

When you successfully predict an atmospheric hazard before entering it, the Game Master must tell you at least:

- The general nature of the phenomenon.
- The direction or area it comes from.
- One concrete consequence it could cause.

The crew can then prepare before facing it.

Depending on the situation, appropriate preparation can:

- Avoid a penalty that would have resulted from being caught by surprise.
- Allow the cargo or sails to be secured.
- Change the course.
- Set up an appropriate Manoeuvre.

Eye of the Sky does not prevent the storm or automatically cancel all its consequences.

BORN HELMSMAN · BASIC

Passive

During a naval battle, the ship adds your Navigation Die to its evasive manoeuvres.

This benefit represents your ability to read the trajectories of cannon fire and adjust the course to avoid it.

SOUND THE DEPTHS

Passive

You know the seabed beneath the keel and can guide the ship through shoals, narrow channels and shallow water.

You can exploit these passages to escape pursuit by larger ships, which risk running aground if they try to follow you.

The Talent allows you to use the seabed's features as an advantage while navigating.

D10 · PIRATE

The Navigator gains advanced planning and cartography abilities. During naval battles they can avoid a particularly dangerous hit and gain greater freedom to manoeuvre.

MASTER COURSE

Passive

When you plot a course, you always anticipate one danger along it, even without achieving a Critical result.

The benefit therefore does not require the Signature's +4 margin.

CARTOGRAPHER

Passive

The nautical charts you create are considered detailed charts.

They grant:

+D8

to Checks that provide a benefit for a detailed nautical chart.

Your charts are reusable and have high commercial value in ports.

BORN HELMSMAN · IMPROVED

- 1× per naval battle
- Prerequisite: Born Helmsman · Basic

You can completely negate one incoming cannon shot.

The ship avoids the hit through a manoeuvre executed at the right moment.

The Talent negates a single cannon shot, not the enemy's entire salvo.

FAIR WINDS

Passive

While you are at the helm and the ship has usable sails, the ship can perform +1 naval Manoeuvre per round.

Fair Winds increases the ship's Manoeuvre limit, but does not grant characters additional Actions.

The second Manoeuvre must therefore be performed by a crew member who still has their Action and occupies the appropriate station.

D12 · VETERAN

The Navigator can face extreme conditions, guide the crew through apparently impossible routes and exploit the sea as a tactical element.

BORN HELMSMAN · MASTERY

Prerequisite: Born Helmsman · Improved

During a naval battle, the ship can manoeuvre and fire in the same turn without penalty.

The Talent removes the penalty associated with this combination, without automatically granting additional cannon shots or Actions.

Being able to manoeuvre and fire in the same round permits both naval Manoeuvres. The helm Manoeuvre and Cannon Shot must still be carried out from their respective stations and use the Actions of the characters involved.

IMPOSSIBLE COURSE

Passive

You can guide the ship through routes that other crews would normally have to sail around.

You can tackle whirlpools, fog banks, magnetic zones, opposing currents and shoals, using your knowledge to identify a navigable route.

The Talent allows you to overcome particularly complex navigation obstacles, but does not make the ship indestructible.

HARNESS THE STORM

Passive

When you are at the helm, you and the ship ignore penalties to Navigation rolls and naval Manoeuvres caused exclusively by:

- Rain.
- Natural fog.
- Rough seas.
- Strong wind.
- Storms.

The phenomenon's physical effects still exist.

A storm can still damage a sail, a wave can still sweep the deck and fog can still physically obscure something that the available instruments cannot locate.

Enemy ships without an equivalent ability continue to suffer the normal penalties.

If you deliberately lead them into weather conditions you have mastered, they make Checks directly hindered by that phenomenon with Disadvantage.

NEVER LOST

Passive

You always know where you are, where you came from and the direction of the open sea.

This ability also works in darkness and below deck.

You can also find your way back to any place you have visited at least once.

The Talent concerns your sense of direction and memory of routes: it does not automatically reveal the location of unknown places.

ESCAPE ROUTE

Passive

When you enter an unfamiliar place, you identify a way out.

You and the characters following you can take it at full speed without getting lost or making rolls to find your way.

The Talent does not automatically remove any enemies or physical obstacles along the way.

D20 · LEGEND

SUPREME TALENT · THE COURSE NO ONE KNOWS

THE COURSE NO ONE KNOWS

- Ultimate
- Once per adventure

The Navigator can identify a route that no one else would have recognised.

The Talent can be used in two different situations.

AT SEA · IMPOSSIBLE CROSSING

Declare a destination that:

- You know or can identify through a chart, a Log Pose, an Eternal Pose or another reliable indication.
- Is physically reachable by sea using the ship in question.

You identify an extraordinary route and the ship completes the crossing without making the usual Navigation Checks.

During the voyage:

- There are no random encounters or unwanted deviations.
- Storms, currents, fog and ordinary navigation hazards do not prevent you from reaching the destination.
- The voyage still takes the route's usual approximate travel time.
- The ship continues to consume provisions and other resources as normal.
- The Ultimate does not allow you to cross dry land, impassable walls, seas physically inaccessible to the ship or other obstacles that would make the voyage itself impossible.

Unavoidable narrative events directly related to the destination are not cancelled by the ability.

IN NAVAL BATTLE · LEGENDARY MANOEUVRE

The ship leaves the enemy's line of fire and reappears in an unexpected position.

The enemy loses their turn and your ship fires first.

Requirements: the Navigator's Ambition and the Game Master's permission.

The Course No One Knows represents the pinnacle of the Navigator's specialisation: outside combat it allows an extraordinary crossing to be completed; during a naval battle it directly changes the ships' positions and the order of events.

4.9 · ENGINEER

A pirate ship survives through more than its crew's strength. The hull must withstand cannon fire, engines must keep running and someone must be able to build and maintain what the crew needs.

The Engineer handles the crew's construction, maintenance and technology. The player chooses one of two Styles, each devoted to a different specialisation.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Engineer
Available Styles	Carpenter, Mechanic
Starting Role Skill Grade	d8

The Role Skill depends on the chosen Style.

STYLE	SKILL	SPECIALISATION
Carpenter	Carpentry	Hull, structures and naval repairs
Mechanic	Mechanics	Machinery, cannons and mechanical components

Each Style's Talents become available at Grades d8, d10, d12 and d20 of the associated Skill. They must still be acquired through Upgrades.

4.9.1 · CARPENTER

The Carpenter knows every plank of the ship, from the keel to the mainmast. They repair damage, reinforce structures and make the hull stronger than it was when built.

Their Role Skill is Carpentry d8.

TRAIT · TIMBER AND HULL

Free · Always active

The Carpenter specialises in building and repairing the hull. During a naval battle, their station is dedicated to repairs, while outside combat they can handle the ship's structural development.

SIGNATURE · A REPAIR THAT HOLDS

Free · Always active

When you achieve a margin of at least +4 on an Emergency Repair Check, double the SP recovered by that repair.

First calculate ordinary recovery, including any additional dice granted by Talents, then double the total.

The Signature only modifies recovered SP and does not double the repair's other effects.

D8 TALENTS · DECKHAND

- Emergency Repair
- Action · Naval battle

You can use the Emergency Repair manoeuvre from Chapter 13.

A successful Check restores 1 Carpentry Die of SP to the ship, before applying any Talents or the Signature.

- Lumberjack
- Passive

When searching for timber or building materials, add your Carpentry Die to the Gathering roll.

- Hands on Wood · Basic
- Passive

Your Emergency Repairs recover +1 Carpentry Die of SP.

You therefore normally recover 2 Carpentry Dice instead of one.

- Barricade
- Action · Within 5 metres

Using materials already present and immediately available — planks, crates, sheet metal, furniture, wreckage or similar items — quickly assemble shelter within 5 metres.

Barricade does not create materials from nothing or allow you to build a complex structure in a few seconds.

The shelter can occupy up to approximately 3 metres in width and normally protect up to three human-sized characters positioned behind it.

It grants Partial Cover, and therefore Passive Defence +2.

If the physical arrangement completely covers a character, the GM can apply the normal Full Cover rules.

The Barricade can be attacked and destroyed like an ordinary object or scenery element.

If the available materials cannot realistically be assembled into shelter, the Talent cannot be used.

D10 TALENTS · PIRATE

- Travelling Shipyard
- Passive

You can repair and upgrade the ship even on the open sea, without having to reach a port.

The time needed is halved.

- Module Master
- Passive

Through structural adaptation, a ship on which you have completed the work gains +1 Module slot.

This is a permanent improvement to the ship.

Multiple Carpenters cannot apply the same benefit to the same ship more than once.

The additional slot does not automatically grant a Module.

- Hands on Wood · Improved
- Prerequisite: Hands on Wood · Basic

With the same Action, you can repair the hull and restore a damaged Module to working order.

The Module must be damaged, not destroyed.

- Boarding Bridge
- Action

When the two ships are in the Alongside band, you can quickly set up gangways, ropes and grappling hooks already available on board to create a connection.

The Talent represents the rapid deployment of prepared equipment: it does not build a gangway from raw timber on the spot.

To create a passage that can actually be walked across, the physical distance between the two decks cannot normally exceed 10 metres.

The crew can cross the connection without making ordinary boarding rolls and without provoking Reaction attacks caused by crossing.

The route can be used in either direction.

If the ships move beyond the distance the connection can sustain, the links break or are released and Boarding Bridge ends.

An enemy can also physically destroy or cut gangways, ropes and grappling hooks.

D12 TALENTS · VETERAN

- Hands on Wood · Mastery
- Once per naval battle
- Prerequisite: Hands on Wood · Improved

You can restore a destroyed Module to working order, not merely a damaged one.

- Reinforced Hull
- Passive

After completing reinforcement work on the hull, the Damage Dice of cannon shots hitting the ship decrease by one step.

Follow the normal scale:

d20	→	**d12**
d12	→	**d10**
d10	→	**d8**
d8	→	**d6**
d6	→	**d4**

This Talent cannot reduce a d4 any further.

If a cannon shot uses multiple dice of the same Grade, all its Damage Dice are reduced by one step.

Reinforced Hull modifies cannon shot damage, not the attack roll.

The benefit belongs to the reinforced ship and does not require the Carpenter's presence.

- Breaking Point
- Passive

You recognise the weak points of structures and objects. Your strikes against these targets deal full damage without requiring a roll.

During a naval battle you can also target a specific Module on the enemy ship.

- Fortification
- Preparation

With at least a few hours of work and appropriate materials, you can turn an existing position into a defensible point.

The Talent normally applies to:

- A room.
- An entrance.
- A section of deck.
- A small encampment.
- Another equivalent, limited area.

Those defending the position benefit from Cover.

The approaches you have prepared can also become Difficult Terrain for anyone trying to reach it.

Fortification uses structures and materials that are actually available.

It does not allow you to build a fortress, a monumental wall, a gigantic bridge or other works requiring an actual Shipyard project in a few hours.

- Grown Ship
- Once per ship
- Prerequisite: Module Master

At the end of a complete structural refit, choose: Hull · Sails · Artillery · Structure.

The chosen value permanently increases by one step, following the normal naval scale: d4 → d6 → d8 → d10 → d12.

Grown Ship cannot raise a statistic beyond d12.

The benefit belongs to the ship and does not require your presence once the work is complete.

The same ship can receive Grown Ship only once, regardless of the number of Carpenters present.

SUPREME TALENT D20 · SHE WILL NOT SINK

SHE WILL NOT SINK

- Ultimate
- Once per naval battle

When the ship would drop to 0 SP or less, it instead remains at 1 SP.

From that moment until the end of the battle:

- The ship cannot fall below 1 SP.
- It can continue performing any manoeuvres the situation makes possible as normal.
- All its Destroyed Modules temporarily function as though operational.

Subsequent hits still strike the ship and may have narrative consequences, damage components or affect characters on board, but they do not reduce the hull below 1 SP while the Ultimate remains active.

She Will Not Sink does not actually repair the damage.

At the end of the battle:

- The ship remains at 1 SP.
- The Modules return to their actual previous condition.
- The Ultimate's benefit ends.
- The ship needs a real Shipyard for structural repairs.

There is no automatic countdown after the battle: the Ultimate does not make the ship sink after a fixed number of minutes or hours.

The ship nevertheless remains in Critical condition. Storms, further battles, leaks still open or other hazards can naturally put it at risk again.

Requirements: the Engineer's Ambition and the Game Master's permission.

4.9.2 · MECHANIC

The Mechanic keeps engines, cannons, gears and devices operational. Where the Carpenter handles the hull, the Mechanic ensures that the machines work.

They can also repair a Cyborg's artificial components.

Their Role Skill is Mechanics d8.

TRAIT · LIVING MACHINES

Free · Always active

The Mechanic specialises in maintaining and operating devices, cannons and engines.

OPERATING MACHINERY

A machine does not act independently unless its sheet says so.

Using it normally requires an operator and the Action, manoeuvre or station specified by the device.

When an ability allows a machine to act twice, the second activation:

- Does not require a second Action from the operator.
- Is resolved separately.
- Consumes the required ammunition, fuel, energy or other resources again.
- Makes any rolls required by the machine again.

Multiple abilities granting the same machine a second activation do not stack.

Unless a rule explicitly states otherwise, a machine cannot gain more than two activations in the same round through these effects.

In naval battle, a system's second activation does not automatically equal a second complete ship manoeuvre.

SIGNATURE · RUNNING LIKE A DREAM

Free · Always active

When you achieve a margin of at least +4 on a Mechanics Check made to operate a machine, that machine can activate a second time in the same round.

The second activation follows all the device's normal rules and pays any ammunition, energy or other resources again.

The Signature only applies to the machine that produced the Check.

If the same machine already has a second activation thanks to Fine Tuning · Mastery, Everything at Full Capacity or a similar ability, it gains no further activations.

D8 TALENTS · DECKHAND

- Rapid Response
- Action

You can quickly restore a Broken device, cannon or machine to working order.

You must be able to physically reach the machine and access its controls or the affected components.

Suitable tools and, where the damage requires them, ordinary spare parts are necessary.

Make a Cunning + Mechanics Check against the device's repair Threshold.

If the machine has no specific Threshold, use Threshold 8.

On a success, the Fault is removed and the device becomes operational again.

Rapid Response:

- Does not reconstruct a Destroyed device.
- Does not automatically recover SP.
- Does not restore HP to a Cyborg.
- Does not automatically repair a Damaged body Module.

Cyborgs and body Modules follow the specific procedures in the Cyborg Manual and the abilities that concern them.

- Dismantler
- Passive

When salvaging mechanical components from machines, wrecks or Cyborgs, add your Mechanics Die to the roll.

- Fine Tuning · Basic
- Passive

When you personally operate a cannon or a machine, you improve its efficiency.

If the result produced by the device is expressed in dice, add +1 die of the same type to that result.

For example:

- A cannon dealing 1d8 SP deals 2d8 SP.
- A machine producing a quantity measured in dice adds one die to its output.

Fine Tuning does not add the die to the operator's Check or automatically change a fixed value.

Rolls made to use the machine are modified by abilities such as Machinist, not Fine Tuning.

- Sabotage
- Action

You can disable an enemy machine that you can physically reach.

You must have access to a control, mechanism or component that can actually be tampered with.

Make a Cunning + Mechanics Check against the device's Threshold.

If no Threshold is specified:

- Ordinary machinery → Threshold 8.
- Complex or protected system → Threshold 12.

If an enemy technician is actively protecting the system, the GM can instead use an opposed Cunning + Mechanics Check.

On a success, the machine becomes Broken and remains unusable until repaired.

Sabotage does not automatically destroy the device.

You cannot sabotage a machine on the other side of a wall or a system to which you have no physical access.

D10 TALENTS · PIRATE

- Hands in Oil
- Passive

When you use the Workshop, you complete repairs in half the time. Your tools do not wear out.

- Machinist
- Passive

During a naval battle, add your Mechanics Die to the rolls of the machines you operate.

- Fine Tuning · Improved
- Prerequisite: Fine Tuning · Basic

With a single Action, you can operate up to two compatible machines.

You must be able to reach their controls or use a station that actually connects them.

Each machine:

- Retains its own functionality.
- Makes its rolls separately.
- Consumes ammunition and energy separately.
- Receives the compatible benefits of Fine Tuning · Basic as normal.

The Talent does not grant the character two Actions.

- Tuned Battery
- Preparation before combat

Before the battle, you overhaul and tune the ship's cannons.

For the entire battle, the Artillery value increases by one step.

At the end of the combat, the cannons must be overhauled before this benefit can be used again.

D12 TALENTS · VETERAN

- Fine Tuning · Mastery
- Once per naval battle
- Prerequisite: Fine Tuning · Improved

Choose a cannon or machine you are operating.

For that round, it can activate twice.

Both activations are resolved separately and consume the device's normal resources.

If the same machine already receives a second activation from the Running Like a Dream Signature or another ability, it does not gain a third activation.

- Flesh and Metal
- Passive

When you perform a Field Repair on a Cyborg, add +1 Mechanics Die to the HP recovered.

If the target also has a Damaged Module, you can restore one Module to operational condition during the same repair, provided the materials needed to repair it are available.

Flesh and Metal does not remove any special Module requirements or allow you to reconstruct unique or destroyed components for free.

- Mechanical Trap
- Preparation · 5 minutes

Using appropriate tools and materials, you can install a trap at a location, in a passage or on an object.

You can have at most two armed traps at the same time.

Spotting it. A character actively searching for the trap makes Cunning + Observation against Threshold 10.

Disarming it. Requires an Action and Cunning + Mechanics against Threshold 10.

Activation. The first enemy to meet the trap's trigger makes a Technique Save against the Threshold determined by the creator's Mechanics Grade when it was prepared (§1.4). On a success, they avoid the effect; on a failure, they become Off-Balance and Restrained.

Breaking free. The Restrained target can spend an Action and make a Strength or Technique Save against the same trap Threshold. On a success, they break free. This specific procedure takes precedence over the normal Restrained contest.

The trap retains the Threshold determined when it was prepared; a later increase in Mechanics does not retroactively modify traps already prepared.

A triggered trap must be prepared again before it can work once more.

- Deep Sabotage
- Prerequisite: Sabotage
- Action

When you physically reach a Module, a control point or an essential connection on the enemy ship, you can try to disable it completely.

Make Cunning + Mechanics against the system's specified Threshold; if it has none, use Threshold 12.

On a success, the Module remains unusable for the rest of the battle.

The Module is not considered Destroyed: it is deeply sabotaged.

Rapid Response is not enough to restore it to working order during that battle.

An ability that explicitly states it can counter deep sabotage may provide an exception.

- Gears and Locks
- Passive · Outside combat

With suitable tools, time and the opportunity to work without interruption, you can open ordinary mechanisms even without their key.

This includes:

- Padlocks.
- Handcuffs.
- Safes.
- Hatches.
- Locks and geared mechanisms.

An ordinary mechanism requires up to 10 minutes of work and no Check.

Exceptional, unique or damaged mechanisms, or those built specifically to resist tampering, may require Cunning + Mechanics against their own Threshold.

The Talent applies to genuinely mechanical systems: it does not automatically overcome seals, powers, materials that cannot be worked or systems belonging to a completely different technology.

If the mechanism contains a trap, you spot it before triggering it.

Spotting it does not automatically mean disarming it.

SUPREME TALENT D20 · EVERYTHING AT FULL CAPACITY

EVERYTHING AT FULL CAPACITY

- Ultimate
- Cost: 5 ST
- Frequency: once per naval battle

For one round, you push all the ship's systems beyond their normal operational limits.

During that round:

- Every cannon and machine actually used can activate twice.
- Normal ammunition, fuel and energy costs are paid for each activation.
- Damaged Modules can temporarily work as though intact.

Second activations do not stack with the Signature, Fine Tuning · Mastery or similar effects.

At the end of the round, the overload must cause a breakdown.

The Game Master chooses a system that actually benefited from the Ultimate:

- An ordinary operational machine becomes Broken.
- An Intact Module becomes Damaged.
- An already Damaged Module that was forced to operate may become Destroyed.

The breakdown cannot be arbitrarily assigned to a system that was not used during the overload and does not automatically destroy the entire ship.

Subsequent repairs follow the affected component's normal rules.

Requirements: the Engineer's Ambition and the Game Master's permission.

4.10 · ARCHAEOLOGIST

The Grand Line holds ruins, vanished civilisations, forgotten inscriptions and secrets that many would prefer to leave buried.

The Archaeologist is the specialist who can reconstruct history through what remains of the past. They can interpret ancient documents, discover hidden mechanisms and recognise the significance of apparently meaningless artefacts.

Their knowledge can open a forgotten passage, reveal an enemy weakness or lead the crew to a discovery that changes the course of the adventure.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Archaeologist
Role Skill	Archaeology
Starting Grade	d8
Path	Single
Trait	The Crew's Memory
Signature	The Pinnacle

The Archaeologist uses Archaeology as the reference Skill for accessing their Talents.

TRAIT · THE CREW'S MEMORY

Free · Always active

The Archaeologist interprets the traces left by past civilisations. Where others see only stones and ruins, they can recognise inscriptions, evidence and information useful to the crew.

The Trait defines their specialisation in historical research. Specific mechanical benefits are granted by acquired Talents.

SIGNATURE · THE PINNACLE

Free · Always active

When you achieve a successful Archaeology roll with a +4 margin, you can obtain a result beyond what the Check would normally provide.

Depending on the activity:

- Translation: you fully understand the text and also discover a hidden detail.
- Exploration: you recognise a trap before it is triggered.

The Signature does not automatically grant both pieces of information: it applies to the activity that produced the result.

ARCHAEOLOGICAL EXAMINATION

When an Archaeologist studies a place, artefact, inscription or material evidence, there must be something from which to derive the information:

- Architecture.
- Symbols.
- Signs of use.
- Materials.
- Inscriptions.
- Damage.
- Objects.
- Evidence already known.

An ordinary examination takes approximately 5 minutes.

If the information is uncertain or hidden, the Game Master calls for a Cunning + Archaeology Check against an appropriate Threshold.

On a success, the player can ask a concrete question about the subject examined, and the Game Master provides true, usable information that can be derived from the traces present.

A failure does not provide false information: it means the available traces have not been correctly interpreted or are insufficient to obtain that answer.

A single Check does not make the Archaeologist omniscient or reveal information that has left no trace.

TRANSLATION AND STUDY TIMES

The time needed depends on the amount and complexity of the material.

MATERIAL	NORMAL TIME
Symbol, sentence or short inscription	10 minutes
Tablet, stele or medium-length text	1 hour
Large inscription, complex code or Poneglyph	4 hours
Archive or collection	One or more study sessions

These times assume the text is physically legible.

Incomplete copies, missing sections or damaged surfaces can make a complete translation impossible.

TALENT TREE

ARCHAEOLOGY GRADE	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Reaching the required Grade allows the corresponding Talents to be acquired through Upgrades. Any prerequisites still apply.

D8 · DECKHAND

The initial Talents allow the Archaeologist to study inscriptions, discover hidden passages and exploit the layout of ruins.

RUBBING MASTER

Passive

You can decipher an inscription even aboard the ship, using a rubbing of it.

Make the Check with Advantage.

The rubbings you create are not consumed during study and can be reused.

EYE OF THE RUINS

Passive

When examining an ancient site, you can discover traps and hidden passages with an ordinary Success.

The +4 margin required by the Signature is not necessary.

DEAD WRITING · BASIC

Passive

Add +1 die to every Check devoted to translating, deciphering or reading inscriptions.

This benefit applies to interpreting texts and writing, not to every Archaeology Check.

FAMILIAR GROUND

Once per combat for cover

Inside a ruin, temple or other ancient site, you ignore penalties for unfamiliar terrain.

Furthermore, once per combat, you can point out an advantageous spot in the surroundings.

Anyone reaching that spot gains Cover.

D10 · PIRATE

The Archaeologist deepens their knowledge. They learn to recognise artefacts, interpret lost scripts and derive information from the histories of those they meet.

ANTIQUARIAN

Passive

When identifying artefacts or trying to recognise a forgery, you gain an additional die on the Check.

If you successfully reconstruct and reveal an artefact's history, you also increase its value.

The Talent does not specify a fixed monetary increase: the value depends on the object and its context.

SCHOLAR

Passive

Halve the time needed to produce treatises, annotated copies and historical maps.

A historical map you complete can be used by the Navigator as a detailed nautical chart and normally grants +d8 when relevant.

DEAD WRITING · IMPROVED

Prerequisite: Dead Writing · Basic

You can read scripts that no one else knows any more.

The Talent includes lost alphabets, codes from vanished civilisations and inscriptions normally considered indecipherable.

It does not yet automatically grant the ability to read Poneglyphs, which is acquired with Dead Writing · Mastery.

INSIGNIA AND SCARS

Recognition

By examining an individual, weapon, emblem, tattoo, uniform or other recognisable signs for at least a moment, you can try to reconstruct part of their history.

Outside combat, the examination normally takes approximately one minute.

During combat it requires your Action.

Make Cunning + Archaeology against the Threshold set by the Game Master.

On a success, you gain true, useful information that can be deduced from the signs observed.

For example, the Talent can reveal:

- Membership of an organisation.
- Cultural origin.
- A war or battle in which the subject seems to have taken part.
- The meaning of a symbol.
- The historical function of a weapon or uniform.

It does not automatically reveal thoughts, secret abilities or events that have left no recognisable traces.

D12 · VETERAN

The Veteran can interpret exceptionally rare evidence, use the mechanisms of ruins and preserve the crew's discoveries.

DEAD WRITING · MASTERY

Prerequisite: Dead Writing · Improved

You have acquired the ability to read Poneglyphs.

Reading still requires time and effort: having the Talent does not mean instantly understanding their entire contents.

This ability gives the crew direct access to the information held in the ancient inscriptions.

A Poneglyph normally follows the reference time of 4 hours of study for a large inscription.

The Talent allows you to read it: it does not guarantee that a damaged or incomplete surface still contains all the original information.

ANCIENT MECHANISMS

Passive

You can understand and use mechanisms built by ancient civilisations.

When you can examine an intact device for at least 5 minutes, you understand:

- Its general function.
- Its normal activation method.
- Any physically accessible controls.

If the device is intact and accessible, and its operation has been understood, you can use its normal functions without breaking it open and without accidentally triggering traps you have already identified.

Understanding a device does not automatically mean:

- Finding every hidden trap.
- Repairing missing parts.
- Supplying it with energy.

- Bypassing a deliberately blocked mechanism.
- Controlling it from a distance when it has no remote control system.

When a mechanism is particularly complex, damaged or must be used under pressure, the Game Master may require Cunning + Archaeology against the device's Threshold.

ANCIENT TRAP

- Action
- Prerequisite: Eye of the Ruins

You can use an ancient trap that you have already found and whose operation you understand.

You must be able to reach its control, trigger or another point that can actually be used.

As an Action, you can activate it when a target is already in the zone the trap can affect.

The target resolves the damage, Statuses and Saves specified by the trap itself.

Ancient Trap:

- Does not create a new trap.
- Does not change its damage.
- Does not change its area.
- Does not allow you to activate it from a distance the device does not support.

The ordinary version does not use a Reaction.

Master of Ancient Mechanisms from the Prestige Manual is what allows you to intervene immediately when a creature reaches the activation point.

MEMORY OF THE WORLD

No roll

When the crew hears about a place, ruin, island or artefact, you already know something about it.

The Game Master tells you a true fragment of information, even when it is uncomfortable or unexpected knowledge.

The Talent does not necessarily reveal all the subject's secrets: it guarantees concrete knowledge as a starting point.

Memory of the World does not require an Archaeological Examination or physical traces in front of the character.

It provides historical knowledge the Archaeologist already possesses.

It normally grants one concrete piece of information per subject when that subject first becomes relevant in the adventure.

Hearing the same name repeatedly does not automatically produce new information.

KEEPER OF KNOWLEDGE

Passive

The knowledge you have gathered is preserved through archives, rubbings and copies also kept elsewhere.

If the ship's library is destroyed or the original documents are lost, the crew retains access to the results of your studies.

The Talent protects knowledge already acquired, not information you have yet to discover.

D20 · LEGEND

SUPREME TALENT · THE VOICE OF STONES

THE VOICE OF STONES

- Ultimate
- Once per adventure

The Archaeologist gains an extraordinary understanding of the evidence and mechanisms left by ancient civilisations.

The Talent can be used in two different ways.

OUTSIDE COMBAT · REVELATION

By studying an inscription or artefact, you derive concrete, usable information that changes the course of the story arc.

The discovery is provided by the Game Master and must have a real consequence for the adventure.

INSIDE A RUIN · DOMINION OVER MECHANISMS

For one scene, you completely understand the control system of the ancient mechanisms present at the site.

You can command only devices that:

- Actually exist.
- Still work.
- Are connected to the system you have understood.
- Have the energy or force they need to function.

The ability does not reconstruct missing parts or create functions the device does not possess.

Opening a door can only open that door. A counterweight system can move only the parts actually connected to it. A trap uses its own damage, area and Saves.

The Ultimate does not grant additional Actions.

Activating a mechanism uses the Action normally specified by the device; if the device has no specific procedure, issuing a meaningful command requires your Action.

You can control a mechanism remotely only if the ruin actually has a connection that allows it.

The narrative revelation of the Ultimate's other form instead remains in the Game Master's hands and must produce a concrete consequence for the adventure.

Requirements: the Archaeologist's Ambition and the Game Master's permission.

The Voice of Stones can be used only once per adventure, choosing one of its two applications when activated.

4.11 · MUSICIAN

The Musician is the crew's voice. Their melodies can restore energy to companions, break fear, weaken opponents and turn a disorganised crew into a group capable of acting in unison.

Their specialisation is not limited to combat. A song can open the doors of a hostile port, pass on a secret message or make a crew famous before it even arrives.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Musician
Role Skill	Art
Starting Grade	d8
Path	Single
Trait	The Crew's Force Multiplier
Signature	The Note That Reaches the Soul

The Musician uses Art as the reference Skill for accessing their Talents.

TRAIT · THE CREW'S FORCE MULTIPLIER

Free · Always active

The Musician supports the crew through their Songs. They can restore Stamina during battle, counter fear and grant benefits to companions.

A musical instrument is not automatically a weapon. To fight directly, the Musician uses the normal combat rules and the abilities they can access.

SIGNATURE · THE NOTE THAT REACHES THE SOUL

Free · Always active

Outside combat, when you achieve a successful Art roll with a +4 margin, your performance wins over its listeners.

You can obtain something the audience did not initially intend to grant you, such as a favour, information, passage or a promise to keep silent about an event.

The concession must be consistent with the situation and the people involved.

The Signature does not activate on Songs in battle: these do not require a roll from the Musician and therefore do not produce a +4 margin.

HOW SONGS WORK

Songs are a special category of Musician Techniques.

The Musician does not make a roll to play a Song. They spend their Action and the Stamina required by the Melody, then the effect is produced.

RECIPIENT	RESOLUTION
Ally	Automatically receives the effect without making any rolls.
Enemy	Makes a Save when the Melody requires one.
Save Threshold	Determined by the musical instrument's Grade.

Each Melody constitutes a complete Song: a Technique can contain only one Melody.

Songs requiring upkeep follow their own duration and cost rules. The Counterpoint Talents progressively modify these limits.

TALENT TREE

ART GRADE	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Talents must be acquired through Upgrades. Reaching a new Art Grade makes them available, but does not automatically grant them.

D8 · DECKHAND

UNWAVERING MUSIC

Passive

Your music does not stop when you become Stunned or are knocked down.

You can therefore continue to sustain a Song despite these conditions.

The Talent does not grant immunity to Statuses: it prevents them from being sufficient, on their own, to stop your performance.

ENTERTAINER'S SOUL

Passive

Outside combat, you make your performances with Advantage.

The required roll is:

Spirit + Art, with Advantage.

This ability applies to artistic performances, not to every Check using Spirit.

COUNTERPOINT · BASIC

Passive

Sustaining a Song no longer prevents you from acting.

You can continue playing and take your turn as normal.

The Talent does not remove the Song's upkeep costs: it only changes your ability to act while sustaining it.

BATTLE RHYTHM

Passive · Additional benefit once per combat

At the start of combat, every ally who can hear you gains:

+1 to Initiative.

Furthermore, once per combat, you can have two companions act consecutively, temporarily skipping the characters who would be between them in Initiative order.

This benefit changes the order of actions, but does not grant the companions an extra turn.

D10 · PIRATE

LONG BREATH

Passive

Your Songs' cost decreases by 1 ST, to a minimum of 1 ST.

The reduction cannot make a Song that normally requires Stamina free.

COUNTERPOINT · IMPROVED

Passive

Prerequisite: Counterpoint · Basic.

You can sustain two active Songs at the same time.

The Songs retain their respective effects and costs. This Talent increases the number of Songs you can sustain without removing the Stamina required.

REQUIEM

Passive · Enhances Mocking Requiem

You have perfected the Mocking Requiem Melody.

Mocking Requiem retains:

- Minimum Grade d8.
- Cost 1 ST.
- The normal Action required to perform a Song.
- One target who can hear you.
- The normal Save determined by the instrument.

If the target fails the Save, they suffer Disadvantage on their next roll.

If the target has already lost at least 1 HP during combat, they make the Save against Mocking Requiem with Disadvantage.

Requiem is not a second Melody and cannot be used at the same time as a separate copy of Mocking Requiem.

THE SONG THAT REMAINS

Passive

You can hide a message in a melody: a course, a name, a combination or another piece of information.

Anyone who knows the tune remembers the message perfectly, even many years later.

Those who do not know it hear only an ordinary song and do not recognise the hidden content.

D12 · VETERAN

COUNTERPOINT · MASTERY

Passive

Prerequisite: Counterpoint · Improved.

Sustaining your Songs no longer requires Stamina per turn.

You pay only the cost needed to perform them.

The Songs' other requirements still apply, including the maximum of two sustained simultaneously thanks to Counterpoint · Improved.

CREW CHORUS

Passive

When at least two companions actually join you in singing, your Songs' reach is doubled.

Furthermore, aboard a ship, the Song can spread through every connected space where the Chorus can actually be heard.

The two companions joining the Chorus:

- Must be conscious.
- Must be able to vocalise or contribute musically.
- Must voluntarily choose to take part.
- Do not spend an Action, Bonus Action or Movement merely to support the Chorus.
- Can continue fighting and acting as normal.

If fewer than two companions can continue to take part, the Chorus's benefit ends immediately.

Crew Chorus does not make the ship an ordinary target of Songs.

A Melody that affects people continues to affect people.

Only a Melody explicitly stating that it affects a ship, station or naval activity — such as Shipboard Song — produces that effect.

FUNERAL MARCH

Offensive Melody · Sustained Song

Prerequisite: Requiem.

Action · 3 ST + 1 ST per turn · Radius: 10 metres

Perform a melody capable of breaking the enemies' courage.

When the Song is performed, every enemy within 10 metres who can hear you makes a Spirit Save against the Song's Threshold.

Those who fail become Terrified while:

- They remain within the Song's reach.
- They can still hear you.
- You continue to sustain Funeral March.

A target who leaves its reach or can no longer hear the music immediately ceases to be Terrified.

Funeral March is a Sustained Song and follows all the normal upkeep rules.

PLAYING FOR THE FALLEN

1 time per battle

When a companion who is still alive reaches 0 HP and can hear you, you can immediately begin supporting them through your music.

The companion remains conscious and Stabilised at 0 HP while you continue playing.

During this period, they can:

- Use their Movement as normal.
- Use an Action.
- Use a Bonus Action.
- Use a Reaction.
- Use Techniques and Talents normally available to them.

They nevertheless remain at 0 HP: the Talent is not healing.

If the companion takes further damage while still at 0 HP, Playing for the Fallen immediately ends for them and the normal consequences for a Downed character who continues to take damage apply.

If they receive actual healing and rise above 0 HP, they no longer need the support and continue normally with their recovered HP.

If the music stops while the companion still has 0 HP, they immediately lose consciousness and return to following the normal Downed rules.

To keep supporting them, you must be able to produce music and the companion must continue to hear you.

Playing for the Fallen is not Field Treatment and does not consume its limit.

LEGEND IN MUSIC

Passive

Your songs spread from port to port, contributing to the crew's fame even in places it has not yet visited.

You gain Advantage on Checks to make yourself heard, recognised or believed before crowds and crews.

The Talent represents the reputation built through your music, not automatic control over listeners' decisions.

D20 · LEGEND

SUPREME TALENT · SONG OF THE SOUL

SONG OF THE SOUL

- Ultimate
- Activation: Action
- Cost: 6 ST
- Frequency: 1 time per scene
- d20 Signature Melody from the Melody Catalogue

The Musician performs a Melody capable of calling forth the entire crew's energy.

Every member of your crew who can hear you, including the Musician, immediately restores their Stamina to its current maximum value.

The cost of 6 ST is paid before applying recovery.

Song of the Soul does not recover Haki PIP, HP or other resources.

The same crew can benefit from Song of the Soul only once per scene, regardless of how many Musicians it contains.

A second Musician therefore cannot use their own Song of the Soul in the same scene to restore the same crew's Stamina again.

Requirements: the Musician's Ambition and the Game Master's permission.

4.12 · CAPTAIN

The Captain holds the crew together and directs its actions. During combat, they coordinate allies, identify priority targets and issue orders that can change the course of the battle.

Outside combat, they represent the crew in negotiations, form alliances and make decisions that determine its course.

ROLE SHEET

CHARACTERISTIC	VALUE
Role	Captain
Role Skill	Communication
Starting Grade	d8
Path	Single
Trait	The Commanding Voice
Signature	The Order That Changes Everything

TRAIT · THE COMMANDING VOICE

Free · Always active

The Captain is the only Role that can directly turn Communication into Orders that make a companion move and act.

Outside combat, Communication also represents their ability to handle negotiations, agreements, threats and alliances between crews.

The specific effects of Orders, including costs and frequency, are defined by their respective Talents.

SIGNATURE · THE ORDER THAT CHANGES EVERYTHING

Free · Always active · At most once per round

The Signature triggers when the Captain achieves:

- A Clean Hit with a +4 margin, or
- A successful Communication Check with a +4 margin.

Choose an ally who can see or hear you.

The ally can immediately take an Action outside their own turn.

They do not receive Movement, a Bonus Action or a new Reaction.

The granted Action does not consume the ally's normal turn.

The ally pays ST, PIP, ammunition and any other resource required by the chosen Action as normal.

The Signature can trigger at most once per round, regardless of how many +4 margins you achieve.

The granted Action follows the normal rules for out-of-turn Actions and cannot generate another chain of Actions through Orders, this same Signature or equivalent abilities.

TALENT TREE

COMMUNICATION	TIER
d8	Deckhand
d10	Pirate
d12	Veteran
d20	Legend

Every Talent must be acquired through Upgrades. Reaching the required Grade allows its acquisition, but does not automatically grant it.

D8 · DECKHAND

WAR CRY

Free · Once per combat

The Captain inspires their companions with a cry that reaches every ally able to hear it.

Each affected ally:

- Removes one removable negative Condition of their choice.
- Adds +1 die to their next roll.

War Cry does not remove physical or environmental causes that continue to apply a Status.

The Talent does not require Stamina.

CAPTAIN'S ORDER · BASIC

Action · 2 ST · Once per combat

Choose an ally within 10 metres who can clearly perceive your Order.

The Order can be issued verbally or through an unambiguous gesture, provided the ally can actually hear or see you.

The ally immediately takes an Action outside their own turn.

They do not receive Movement, a Bonus Action or an additional Reaction.

The Captain spends their Action to issue the Order.

The ally retains their normal turn and pays all costs of the chosen Action.

The granted Action follows the normal rules for out-of-turn Actions.

A Den Den Mushi or another means of communication can transmit an ordinary message, but does not automatically extend an Order's mechanical reach.

An ability or piece of equipment must explicitly state it can transmit Orders beyond their normal reach.

COMMANDER'S EYE

Passive

At the start of combat, the Captain and their allies can freely swap positions in Initiative order.

After establishing the order, the Captain can designate a Priority Target.

Only one Priority Target can exist at a time.

The first ally to attack that target during each round treats its Passive Defence as reduced by 2 for that attack.

At the start of each new round, before the first character acts, the Captain can change the Priority Target for free.

If they do not declare a new target, the previous one remains.

If the target is defeated, the Captain can designate a new one at the start of the following round.

The benefit can be used only once per round, even if several allies attack the same target.

Example: the Captain identifies an officer with Passive Defence 13 and declares them the priority target. The first ally to attack them in the round treats their Passive Defence as 11.

CREW SHIELD

Reaction · Target within 5 metres

Requirement: Nakama Bond of at least d8.

When an ally within 5 metres is about to take damage from a source you can physically protect them against, you can use your Reaction to interpose yourself and take that damage in their place.

For example, Crew Shield can intercept:

- A direct attack.
- A projectile.
- A melee strike.
- A Technique that directly deals damage.
- The portion of damage the ally takes from an Area effect, if you can realistically place your body in its way.

It cannot transfer ongoing damage or damage without an interceptable source, such as:

- Poisoning already applied.
- Burning already active.
- Suffocation damage.
- A fall.
- Self-inflicted damage.
- Other consequences that cannot be physically intercepted.

Once the damage has been transferred, the ally does not take it.

The Captain reduces the transferred Damage Dice by one die, to a minimum of one die.

They then apply their normal passive protections, Damage Reductions and other compatible defensive effects.

The ally's defences are not applied, since they are no longer the one receiving the damage.

Since Crew Shield uses the Captain's Reaction, the Captain cannot use a second ability that requires a Reaction against the same damage.

If the Captain was already independently affected by the same Area effect, they resolve their own damage and the ally's transferred damage separately.

When the Nakama Bond reaches d20, instead of reducing the Damage Dice by one, halve the transferred damage after the roll, rounding down.

The Captain's normal passive protections are applied afterwards.

D10 · PIRATE

CAPTAIN'S ORDER · IMPROVED

Prerequisite: Captain's Order · Basic.

The usage limit of Captain's Order increases to twice per combat.

Each Order retains:

- The Captain's Action.
- The cost of 2 ST.
- The normal reach of 10 metres.
- All the Order's normal rules.

The new limit replaces that of the Basic version.

A VOICE THAT CARRIES FAR

Passive

The reach of your Orders and your War Cry is no longer limited to the usual 10 metres.

During combat, they reach every ally on the battlefield who can actually see or hear you.

During a naval battle, they can reach your entire ship.

The Talent changes only reach. Costs, Actions, frequencies and other requirements remain unchanged.

THE PLAN

Preparation before combat

If you have had the opportunity to prepare for combat and explain a plan to the crew, create a shared pool of:

3 rerolls
If Communication is d12 or higher:

4 rerolls
A reroll allows an ally to reroll a single die just rolled.

The decision is made after seeing the die's result, but before the roll's consequences are finally applied.

The new result replaces the previous one, even if it is worse.

The same die cannot be rerolled more than once.

Multiple rerolls can be spent on the same pool, provided each is used on a different die.

The reserve belongs to the crew as a whole. When a reroll is used, it is removed from the reserve.

PARLEY

Action · At most 1 attempt per target per combat

During combat, you can try to impose a brief truce to speak with an opponent able to hear and understand you.

Ordinary enemy: listens automatically. **Important enemy:** make an opposed Check:

- Captain: Spirit + Communication.
- Opponent: Spirit.

On a tie, the opponent prevails.

If the Captain succeeds, on the opponent's next turn they must devote their Action to listening and responding to the negotiation instead of taking a hostile Action.

They retain Movement, Bonus Action and Reaction when these can be used non-hostilely or defensively.

After they have listened, the Captain can make the normal Communication Check required by the proposal: a truce, information, surrender, a duel, an exchange or another appropriate agreement.

Parley only compels them to listen. It does not compel them to accept the proposal.

The effect ends immediately if:

- The Captain or one of their allies attacks the target.

- The target is deliberately subjected to another hostile action by the crew.
- The situation makes continuing the dialogue physically impossible.

If the effect ends before the opponent's turn, they act as normal.

Regardless of the result, Parley cannot be attempted again against the same target during that combat.

D12 · VETERAN

CAPTAIN'S ORDER · MASTERY

Prerequisite: Captain's Order · Improved.

You still have 2 Orders per combat.

When an ally takes the Action granted by one of your Orders, they make any required roll with Advantage.

The cost remains 2 ST, and issuing the Order uses your Action.

Reach and the rules for out-of-turn Actions apply as normal.

SECOND IN COMMAND

1 time per battle

At the start of combat or during your turn, appoint a companion as your Deputy.

Once during that combat, the Deputy can use their Action to issue one of your ordinary Captain's Orders.

The Deputy:

- Personally pays the required 2 ST.
- Uses the Order's normal reach.
- Must be seen or heard by the ally receiving the Order.
- Consumes one of the Captain's Order uses still available in your reserve.

If you have Captain's Order · Mastery, the Action granted by the Deputy receives Advantage as normal.

Second in Command does not grant the Deputy the Captain's other Talents or allow them to use Sovereign Order from the Prestige Manual.

If the Captain falls, the Deputy retains this option until the end of combat.

NO ONE LEFT BEHIND

Reaction · 1 time per combat

Prerequisite: Crew Shield.

When a companion with whom you have a Nakama Bond reaches 0 HP, you can use your Reaction to stop them from collapsing.

The companion remains conscious and is temporarily considered to have 1 HP until the end of their next turn.

This HP represents only the character's ability to keep acting thanks to the Captain's order and is not healing.

During this window, the companion can use Movement, Action, Bonus Action and Reaction as normal.

If they take at least 1 damage, the support ends immediately: they return to 0 HP and follow the normal Downed rules.

If they actually recover at least 1 HP through healing or another ability before the effect ends, No One Left Behind ends and the character keeps the HP actually recovered as normal.

If they receive no healing, the support ends at the end of their next turn and the character returns to 0 HP, becoming Downed under the normal rules.

The temporary HP cannot be increased or recovered: any actual healing directly replaces this temporary condition.

ORDERLY RETREAT

Action

The Captain orders the crew to disengage from combat.

All companions can immediately move their Speed without provoking Reaction attacks caused by disengaging.

The Talent allows a coordinated retreat. It does not prevent enemies from pursuing the crew on subsequent turns.

D20 · LEGEND

Supreme Talent · All Hands, Board!

All Hands, Board!

- Ultimate
- 5 ST · once per scene

The Captain issues an order that immediately mobilises the entire crew.

Every ally who can see or hear them acts immediately, outside their own turn.

Each affected ally gains:

- Movement
- Action

Once this sequence is over, combat resumes as normal in the previous Initiative order.

Requirements: the Captain's Ambition and the Game Master's permission.

All Hands, Board! grants each affected ally immediate Movement and an Action. It does not replace the character's normal turn or permanently change Initiative.

CHAPTER 5 ·

SKILLS AND CHECKS

A pirate may be strong enough to lift an anchor, yet not know how to repair it. They may have excellent aim and fail to recognise a trap hidden beneath their feet.

Attributes represent the character's fundamental abilities. Skills indicate what they have learnt to do through experience, study and training.

When an action's outcome is uncertain, Attributes and Skills work together to determine the result.

5.1 · HOW TO MAKE A CHECK

A Check is called for when a character attempts an action that could fail and whose outcome matters to the scene.

The player declares what they want to achieve. The Game Master identifies the appropriate Attribute and Skill, sets a Threshold and calls for the roll.

THE BASIC CHECK

ATTRIBUTE + SKILL

Roll both dice and add their results together.

Total ≥ Threshold: the action succeeds.

Total below the Threshold: the action fails.

Example: a pirate wants to spot a hidden sentry. The GM calls for Cunning + Observation, with Threshold 8.

The character has Cunning d8 and Observation d6. They roll 6 and 4, for a total of 10.

The Check succeeds.

There is no need to roll for every activity. If the character can perform an action without significant risks or obstacles, the GM directly describes the result.

5.2 · THRESHOLDS

The Threshold represents the difficulty to reach. The GM sets it based on the situation before resolving the Check.

THRESHOLD	DIFFICULTY
4	Trivial
8	Normal
12	Expert
16	Vice Admiral level
20	Admiral level
25+	Legendary

The Threshold depends not only on the declared action, but also on the circumstances.

Climbing a dry wall with plenty of handholds is not necessarily as difficult as scaling a wet ship's side during a storm.

The GM can therefore use different Thresholds for apparently similar actions.

A tie is enough to succeed: if the Threshold is 12 and the total result is 12, the Check succeeds.

5.3 · MARGIN OF SUCCESS

The margin measures how far the result exceeds the Threshold.

Margin = total rolled − Threshold

A result that just meets the requirement achieves the objective. A high margin may produce a particularly effective success.

MARGIN	INTERPRETATION
0	Barely successful
+1 / +3	Success
+4 or higher	Success with a high margin

The GM can use the margin to enrich the narrative, granting information or benefits consistent with the action.

The +4 margin also has a specific importance: it can trigger Role Signatures and other effects that explicitly require it.

For example, a Navigator who succeeds on a Navigation Check with a +4 margin triggers Perfect Course.

A +4 margin does not, however, automatically grant a universal bonus to every Check. Follow the effect of the ability involved.

5.4 · THE SIXTEEN SKILLS

There are sixteen Skills in Grand Line Chronicles. Each represents a distinct discipline.

SKILL	USES
Acrobatics	Balance, tumbling, evasion.
Archaeology	History, ancient languages, inscriptions and Poneglyphs.
Art	Music, drawing, performances and artistic forgeries.
Crafting	Making objects and tools.
Athletics	Running, climbing, wrestling and physical exertion.
Carpentry	Building and repairing the ship.
Communication	Persuading, negotiating, commanding and intimidating.
Cooking	Preparing meals and recovery through food.
Exploration	Finding your way and searching while exploring islands.
Stealth	Moving unseen and picking locks.
Mechanics	Machinery, cannons and devices.
Medicine	Wounds, poisons, treatment and stabilisation.
Nature	Animals, plants and weather phenomena.
Navigation	Log Poses, courses, currents and crossings.
Observation	Dangers, clues and intentions.
Survival	Obtaining food, water and shelter.

Skills are not interchangeable merely because they can contribute to the same objective.

Example: to reach a hidden place, a pirate might use Exploration to find the route, Athletics to scale a wall and Stealth to avoid the guards.

These are three different activities, even though they belong to the same plan.

5.5 · WHICH ATTRIBUTE SHOULD YOU USE?

The GM chooses the Attribute consistent with the declared action. Skills are not permanently tied to a single Attribute.

A character trying to climb might use Strength + Athletics. To spot a hidden clue, they might use Cunning + Observation.

The choice should depend on how the character approaches the situation.

There is no need to invent a new Skill to represent a different approach. Use the sixteen existing disciplines, paired with the appropriate Attribute.

5.6 · SKILLS AT CREATION

Each character starts with five developed Skills.

ALLOCATION	QUANTITY
Role Skill at d8	1
Free-choice Skills at d6	2
Free-choice Skills at d4	2

The other eleven Skills start at 0.

The Role Skill is determined by the chosen Role or Style. The four additional Skills are freely selected.

If the character has two Roles, they still receive only one starting d8 as a Role Skill: the player chooses which of the two receives it.

SKILLS AT 0

A Skill at 0 represents a discipline the character has not yet developed.

The first time they use or train it meaningfully, with the Game Master's approval, it can unlock directly at d4.

From then on, it can be improved by spending Ability Points.

Unlocking must come from a concrete experience. Simply declaring that every Skill has been used once is not enough to immediately gain sixteen proficiencies.

5.7 · BONUS DICE AND UNFAVOURABLE CONDITIONS

Circumstances can modify a Check.

A favourable position, careful preparation, a companion's help or a special effect may grant bonus dice to add to the roll.

Adverse conditions may instead increase the Threshold or subtract dice, according to the applicable effect.

Example: a character tries to repair a device. If they have appropriate tools and benefit from an ability that adds Mechanics to the roll, they add the indicated die to the normal Check.

Benefits explicitly granting Advantage or Disadvantage follow their respective general rules.

Do not add dice or modifiers merely because an action is described spectacularly: mechanical benefits come from conditions and abilities that actually apply.

5.8 · SKILLS AND TECHNIQUES

Skills and Techniques represent two different elements of the character sheet.

A Skill is a general discipline used in many situations: Medicine to heal, Communication to negotiate, Athletics to climb.

A Technique is a specific move or power, with its own die and any particular effects.

For an ordinary Check, use:

Attribute + Skill.

When the situation calls for a Technique, follow that Technique's specific rules instead of automatically replacing it with a Skill.

Skills improve through Ability Points. Racial and Custom Techniques neither accumulate nor spend AP: racial Techniques follow developments granted by the GM, while the limit of Custom Techniques depends on their associated Attribute.

CHAPTER 6 ·

COMBAT

On the Grand Line, combat can begin with a cannon shot, a punch or one provocation too many. When it does, every combatant must decide how to use their turn: attack immediately, prepare a Technique, activate Haki or wait for the right moment to unleash a Special Move.

Combat in Grand Line Chronicles is based on four fundamental resources: Movement, Action, Bonus Action and Reaction.

Techniques determine what a character can perform. Talents expand their options. Haki can enhance their abilities, but requires careful resource management.

6.1 · INITIATIVE

At the start of every combat, all combatants make an Initiative roll.

INITIATIVE ROLL

TECHNIQUE + CUNNING

Combatants act from the highest result to the lowest.

Initiative order is kept in subsequent rounds unless an ability changes it.

Example: three combatants roll 16, 12 and 8 respectively. The first acts, then the second and finally the third. Once their turns end, a new round begins.

6.2 · THE COMBAT TURN

Each character normally has the following resources.

RESOURCE	QUANTITY	FUNCTION
Movement	1	Move within your Speed.
Action	1	Attack, use a Technique or perform a Special Move.
Bonus Action	1	Activate an active Talent or Haki.
Reaction	1	Respond to an event that allows a reaction.

The character can use Movement, Action and Bonus Action in any order they prefer, observing the requirements of the abilities used.

Movement can also be split before and after the Action.

An Action cannot freely be converted into a second Bonus Action, nor can two Bonus Actions be used in the same turn.

A Talent or ability explicitly granting an additional Action is an exception and follows its own description.

6.2.1 · THE ACTION

The Action represents the character's main activity.

It can be used to make a basic attack, perform a Technique, use a Special Move or carry out an activity requiring an Action.

Additional attacks can only be made when an ability explicitly grants them.

For example, Flurry allows extra attacks within the Talent's limits and costs. These attacks are not new main Actions.

6.2.2 · THE BONUS ACTION

The Bonus Action allows you to activate an ability without consuming the main Action.

Each turn, you can perform only one of the following activations:

Active Talent

Activate a Talent and pay any Stamina cost.

Haki

Activate Haki and pay its activation cost.

Fundamental rule

You can activate only one active Talent per turn.

If you use the Bonus Action to activate Haki, you cannot activate an active Talent in the same turn.

If you use it for an active Talent, you cannot activate Haki in the same turn.

A Talent listing a cost of 0 ST does not automatically become passive: its classification matters. If it requires activation and is an active Talent, it still uses the Bonus Action.

PASSIVE TALENTS

Passive Talents apply automatically when the described conditions are met.

They do not consume Bonus Actions or require voluntary activation.

A passive Talent does not bypass its own limits, however: if it can apply only once per turn or per combat, that limit still applies.

ABILITIES WITHOUT AN EXPLICIT CLASSIFICATION

If an ability requires the player to choose voluntarily whether to apply or activate it when its conditions are met, it is considered an active ability.

If no other resource is specified, activation uses the Bonus Action.

If instead the effect applies automatically when its specified conditions are met, it is considered passive and does not use the Bonus Action.

An ability explicitly specifying an Action, Reaction or another activation method naturally uses that specific rule.

REACTION TALENTS

Talents triggered in response to a specific event and requiring a Reaction use the Reaction, not the Bonus Action.

For example, Crew Shield is used when an ally is about to take damage.

6.2.3 · ACTIONS GRANTED OUTSIDE THE TURN

Some abilities allow a character to act immediately outside their own turn.

When an ability simply grants an Action, the character receives only an ordinary Action.

They do not automatically receive:

- Movement.
- A Bonus Action.
- An additional Reaction.
- A new turn.

Resources already consumed are not recovered, and the abilities used retain their costs and limits.

The granted Action can trigger Signatures, passive Talents and other compatible effects as normal.

However, an Action gained outside the turn cannot be used to activate another ability whose main effect is itself to grant an Action, Movement or a turn outside the normal Initiative order.

This restriction prevents Orders, Signatures or similar abilities from generating chains of Actions between multiple characters.

When an ability explicitly grants Movement, a Bonus Action or other resources too, its specific description takes precedence.

6.3 · HAKI ACTIVATION AND UPKEEP

Haki requires activation before benefits dependent on its active state can apply.

ACTIVATING HAKI

1 Bonus ActionSpecified activation cost

Activation consumes the turn's Bonus Action.

Once active, Haki can be used under the rules of its Colour and effects.

UPKEEP

Haki already active does not need to be activated again each turn.

To sustain it, the character pays the specified upkeep cost. For abilities requiring 1 ST per turn, they therefore pay 1 ST during each turn in which upkeep continues.

Upkeep does not consume a new Bonus Action unless a specific effect states otherwise.

This allows Haki to be activated on one turn and the next turn's Bonus Action to be used for an active Talent.

Example: a fighter activates Armament Haki on their first turn. On their second, they sustain it by paying the required ST and use their Bonus Action to activate Flurry.

If Haki is no longer active, it must be activated again before its benefits apply.

6.4 · SPECIAL MOVES

A Special Move is a customised combination of the character's own abilities.

It can include a Technique, Builder effects, Haki benefits and compatible Talents.

The Special Move collects these components into a move ready to use and consult during combat.

SPECIAL MOVES RULE

A Special Move does not grant additional effects, remove costs or change the Action economy.

All its components must be usable when the move is performed.

Passive effects apply automatically when their conditions are met.

Haki must be active.

The Special Move combines an ordinary Action, compatible passive effects and at most one effect activated with the Bonus Action: an active Talent or an active Haki effect (⚡). The first activation of a Colour also requires the Bonus Action: these activations cannot be combined in the same turn.

An offensive Special Move normally uses the main Action to make the attack.

Its preparation may instead require one or more turns, depending on the abilities involved.

6.4.1 · ACTIVATIONS IN THE SAME TURN

If a Special Move requires Haki, but does not require activation of an active Talent or an active Haki effect (⚡), the character can:

- Activate Haki with the Bonus Action.
- Perform the Special Move with the Action.

The two operations can happen in the same turn because they use different resources.

6.4.2 · ACTIVATIONS ACROSS SEVERAL TURNS

If a Special Move requires both Haki activation and an active Talent, the two activations cannot take place in the same turn.

The character can prepare the combination by activating Haki on the first turn, sustaining it on the second and then using the Bonus Action for the Talent.

The combination works only if every required effect still applies when it is performed.

Instantaneous Talents or Haki effects cannot be accumulated in advance. An effect prepared on an earlier turn remains available only if its duration allows this and it has not yet expired. A cost already paid is not repeated, but the Special Move neither renews nor extends the duration.

6.4.3 · Complete example: Diable Jambe, Burning Combo

A fighter has a Special Move that uses Armament Haki and the Flurry · Mastery Talent.

The move also contains passive effects that apply when their respective conditions are met.

BURNING COMBO

Preparation and execution sequence

TURN 1 · PREPARATION

Haki

Bonus Action: activate Armament Haki, paying its activation cost.

Action: you can still make an ordinary attack or take another available action.

Haki remains active according to its duration and upkeep rules.

TURN 2 · EXECUTION

Combo

Upkeep: pay the specified cost to keep Haki active.

Action: perform Burning Combo with the initial unarmed attack.

After the initial attack, Bonus Action: activate Flurry · Mastery.

You can attempt up to three extra unarmed basic attacks, paying 1 ST, 2 ST and 3 ST respectively before each: the complete sequence costs 6 ST, in addition to the initial attack and Haki costs. You can stop after any extra attack; a miss does not interrupt the sequence. Ordinary extra attacks do not reuse the Burning Combo Technique.

Passive effects apply automatically when their conditions are met.

If the character hits the same target at least twice during the turn, Constant Pressure can trigger, provided it is among their passive Talents.

There is no need to spend a second Bonus Action to apply it.

The Special Move does not bring forward or grant any free activation: it describes a combination the character must prepare and perform while observing the rules.

6.5 · MOVEMENT AND DISTANCES

Distances are expressed in metres.

There is no need to use a grid: the Game Master can describe positions narratively and use measurements when needed to determine reach, cover or Displacement possibilities.

DISTANCE	REFERENCE
1–2 m	Close combat
5 m	Nearby ally
10 m	A room or part of the deck
20 m	A significant shooting distance
50 m and beyond	Large areas and landscape scale

RACIAL MOVEMENT

RACE	MOVEMENT
Human	10 m
Fish-Man / Merman	10 m
Fish-Man / Merman, in water	20 m
Giant	14 m
Mink	14 m
Mink, in Sulong	16 m
Lunarian	10 m
Cyborg	10 m
Tontatta	8 m

There is no Run Action. Forgoing your Action does not double Movement.

The character can exceed their Speed only when a specific ability permits it.

CLIMBING AND SWIMMING

Climbing and swimming require double Movement.

A character with Movement 10 metres can therefore climb 5 metres.

A Fish-Man does not suffer this penalty when moving in water.

JUMPING AND FALLING

With a short run-up, a character can make a long jump of up to half their Movement.

Falls begin to cause damage from a height of 3 metres. The GM determines the consequences based on the distance and situation.

6.6 · MELEE REACH

Reach indicates the maximum distance at which a character can hit a target in melee.

ATTACKER OR WEAPON	REACH
Unarmed and short weapons	1 m
Spears, staves and other long weapons	2 m
Giants and large Zoans	2–5 m

The reach specified by a particular weapon or Technique takes precedence over the general values.

MOVING AWAY FROM AN ENEMY

When a character leaves the reach of an opponent threatening them, that opponent can use their Reaction to make an attack.

Some Talents allow disengaging without provoking Reaction attacks.

An Off-Balance character cannot make this attack if the Status prevents them from using Reactions.

FORCED DISPLACEMENT

Displacement caused by Push, Launch, Attraction, Drag or another ability that forcibly moves a creature does not provoke Reaction attacks for moving away.

If forced Displacement would take a creature over an edge, off a surface or into a position where they could reasonably try to grab hold, the target can make a Strength Save.

If they succeed on the Save, they manage to grab hold or stop the fall when physically possible.

The Game Master sets the Threshold based on the situation.

6.7 · ATTACKING

When a character makes an attack, they use an Attribute and the die appropriate to the attack type.

BASIC WEAPON ATTACK

ATTRIBUTE + WEAPON GRADE

Damage: Weapon Die.

BASIC UNARMED ATTACK

ATTRIBUTE + ROLE SKILL USED FOR COMBAT

Damage: die of the same Role Skill.

TECHNIQUE ATTACK

ATTRIBUTE + TECHNIQUE DIE

Damage: Technique Die, unless modified.

The Attribute and Skill used must be compatible with how the character is fighting.

The Attribute used is the one specified by the weapon or Technique.

The result is compared with the target's Passive Defence, unless they use a defence permitted by their abilities.

6.8 · PASSIVE DEFENCE

Passive Defence (PD) represents the ability to avoid or withstand an attack without making a defensive roll.

PASSIVE DEFENCE AND PRESTIGE

When the Racial Attribute enters Prestige, Passive Defence continues to depend on its complete Grade. To determine it, add the maximum values of all dice making up the Racial Attribute's Grade, then add +1. No roll is made.

Passive Defence = sum of the maximum values of the Racial Attribute Grade + 1.

RACIAL ATTRIBUTE	PASSIVE DEFENCE
d4	5
d6	7
d8	9
d10	11
d12	13
d20	21
d20+d4 · Prestige I	25
d20+d6 · Prestige II	27
d20+d8 · Prestige III	29
d20+d10 · Prestige IV	31
d20+d12 · Prestige V	33
d20+d20 · Saikyō	41

Explicit Passive Defence modifiers granted by Talents, Techniques, cover, Haki, Unique Traits or other effects apply after determining this base value.

Example: a character with a d20+d8 Racial Attribute has PD 29. With Monstrous Body, PD becomes 31; with Living Fortress, it becomes 33. Living Fortress replaces Monstrous Body's +2 bonus with +4 total: the two values are not added together.

6.9 · ATTACK MARGIN

To determine an attack's outcome, calculate its margin:

Margin = attack result − PD

MARGIN	RESULT
Below 0	Miss
0	Successful defence, no damage
+1 / +3	Hit
+4 or higher	Clean Hit

If the target chose Active Defence, the attack Margin is calculated against the Active Defence result instead of Passive Defence.

A tie is considered a successful defence and cannot produce a Hit or Clean Hit.

Unlike ordinary Checks, matching Passive Defence is not enough to deal damage.

CLEAN HIT

An attack with a margin of at least +4 is a Clean Hit.

The character deals normal damage and applies any abilities triggered by this result, including compatible Signatures.

A Clean Hit does not automatically double damage.

Example: a pirate attacks an enemy with PD 9 and rolls 14.

The margin is +5: the attack is a Clean Hit.

6.10 · ACTIVE DEFENCE AND REACTIONS

Active Defence uses the character's Reaction. It must be declared when they are chosen as a target, before the attacker's attack roll; it replaces Passive Defence for that attack and does not allow a return to it after a failure.

ATTACK TECHNIQUE AS ACTIVE DEFENCE

Besides Dodge and Block, you can use a compatible attack Technique as Active Defence. Declare this choice when selected as a target, before the attacker's attack roll. Spend the Reaction and immediately pay all the Technique's normal ST costs; failure does not refund Stamina. Make the normal Technique roll: Attribute + Technique Die, unless specific rules apply. If you meet or exceed the attacker's roll, you neutralise the attack; ties favour the defender. A Technique used to defend does not normally deal damage or automatically apply its offensive effects. With the Counterblow Talent, only if the defence exceeds the opponent's roll do you also deal the Technique's normal Damage Die. A tie defends but deals no damage.

PARRY

A character wielding a compatible weapon can attempt an ordinary Parry, spending their Reaction and observing any costs and requirements of the ability used. This does not require a Parry effect in the Builder.

ATTRIBUTE + WEAPON DIE

The Parry succeeds if it meets or exceeds the enemy's attack roll. A successful Parry avoids the hit, but does not automatically deal damage. Counterblow instead requires Active Defence performed with a compatible attacking Technique.

Reactions are independent of the Bonus Action: a character who activated Haki or a Talent on their turn can still react if they have their Reaction and meet the required conditions.

6.11 · DAMAGE AND HIT POINTS

When an attack hits, the character rolls the Damage Die specified by the weapon or Technique used.

For Techniques, the Damage Die normally corresponds to their Grade.

TECHNIQUE GRADE	DAMAGE DIE
d4	d4
d6	d6
d8	d8
d10	d10
d12	d12
d20	d20

The result is subtracted from the target's Hit Points.

Remaining HP = current HP − damage taken

Any additional dice, multipliers and modifiers come from effects that actually apply to the attack.

TECHNIQUE COSTS

A Technique used without enhancements does not automatically require Stamina.

Additional Builder effects instead require the costs listed in their respective descriptions.

When a Special Move contains multiple effects, all applicable costs must be paid. The Special Move grants no implicit discounts.

CALCULATION ORDER

When multiple effects modify the same damage, apply them in the following order:

1. increases or reductions in dice Grade;
2. addition or removal of dice;
3. rolling the dice and adding up the damage;
4. multipliers;
5. halving;
6. fixed numerical reductions or increases.

Compatible effects stack.

Two distinct effects doubling the same damage therefore produce ×4, unless one of the abilities explicitly states it cannot stack or specifies a different method.

A specific rule setting its own order takes precedence over this general sequence.

6.12 · CRITICAL CONDITIONS

DOWNED

When a character reaches 0 HP, they become Downed and normally leave the combat.

Reaching 0 HP does not automatically cause death.

A Downed character cannot act normally unless an ability explicitly states otherwise.

A companion can move them to safety if the situation and physical conditions permit it.

Healing, Doctor abilities and other effects restoring HP can bring them above 0 HP and restore consciousness under their respective rules.

Death can occur only when, after the character is already Downed, an enemy deliberately continues acting against them, or when a circumstance in the scene concretely threatens their life. Resolving these situations is the Game Master's responsibility.

If the character survives to the end of combat and has not been healed, they regain consciousness with 1 HP.

Downed is not equivalent to the Crashed Status.

6.12.1 · STABILISATION

A Downed character can be Stabilised to bring the wounds that reduced them to 0 HP under control.

- Activation: Action.
- Target: a character at 0 HP who can be physically reached.
- Check: Cunning + Medicine.
- Ordinary Threshold: 8.

If the Check succeeds, the character is Stabilised.

Stabilising does not restore HP or return the character to consciousness.

An ability may exceptionally keep a Stabilised character conscious at 0 HP. In this case, the character follows the specific rules of the ability used; being Stabilised alone does not normally allow them to act.

The wounds that reduced them to 0 HP no longer pose an immediate threat to their life on their own.

Stabilisation does not, however, protect against new dangers. A character can still take damage, be deliberately attacked, suffocate, drown, burn, suffer the effects of a still-active poison or face other conditions capable of killing them.

If an ability or object allows Stabilising without a Check, Stabilisation automatically succeeds.

Stabilisation does not count as Field Treatment.

The normal rule still applies: a character who survives to the end of combat without being healed regains consciousness with 1 HP.

6.12.2 · PERSISTENT CONSEQUENCES

Not every consequence of a wound is represented by losing HP or by a Status.

Fractures, embedded bullets, particularly serious injuries, diseases and other long-term conditions can be represented as Persistent Consequences.

A Persistent Consequence arises only when a rule, hazard or the Game Master explicitly assigns it.

Reaching 0 HP, suffering a Critical hit or losing many HP does not automatically generate a Persistent Consequence.

Each Persistent Consequence must specify at least:

Cause · Effect · Treatment · Healing condition

When a Check is needed, the Consequence can specify its own Threshold. If it does not, the Game Master uses the normal Thresholds from Chapter 5.

Recovering HP does not automatically remove a Persistent Consequence.

Likewise, an effect removing a negative Status does not automatically set a fracture, extract a bullet or cure a disease.

A Consequence ends when its treatment conditions are met.

DISEASES

A disease can specify its own duration, symptoms, Threshold, progression and treatment.

There is no compulsory universal progression for all diseases: a simple disease may resolve through rest and treatment, while an important disease may have its own sheet.

FATIGUE

A character's ordinary fatigue is mainly represented by Stamina and the Rest rules.

A form of persistent fatigue exists only when a rule or a specific Consequence introduces it.

6.13 · STATUSES

Techniques, Signatures, Talents, poisons and other abilities can apply Statuses.

When an ability explicitly modifies a Status's duration, damage, Save or operation, that specific rule takes precedence over the general rule given here.

If an effect grants a Save without specifying its timing, the first Save is made when the Status is applied. If the Status remains, the target can repeat the Save at the end of each of their turns unless stated otherwise.

For Statuses granting a Save, the Attribute is listed here; the Threshold comes from the original source under §1.4 and remains fixed while that cause persists. Individual Thresholds and specific procedures take precedence.

STATUS	EFFECT	DAMAGE	SAVE / REMOVAL
Off-Balance	The character cannot use Reactions.	—	Technique against the source's Threshold.
Bleeding	The character continues losing blood until the wound is treated.	1d4 HP at the start of their turn.	It has no automatic Save. It requires Medicine, appropriate Healing or an ability explicitly treating the haemorrhage. A generic effect removing negative Statuses does not automatically stop bleeding that is still active.
Poisoned	The character suffers the effects of the substance that poisoned them.	If the poison specifies no damage of its own, 1d6 HP at the start of the turn.	Strength against the poison's Threshold. Each poison can have different damage, effects and Thresholds.

STATUS	EFFECT	DAMAGE	SAVE / REMOVAL
Blinded	Attacks and Checks depending on sight are made with Disadvantage. They cannot normally use abilities requiring a clear line of sight.	—	Technique against the source's Threshold.
Terrified	They cannot voluntarily approach the source of fear, and their attacks are made with Disadvantage.	—	Spirit against the source's Threshold.
Stunned	They cannot use an Action, Bonus Action or Reaction. They can still use their Movement.	—	Strength against the source's Threshold.
Paralysed	They cannot use Movement, Action, Bonus Action or Reaction.	—	Strength against the source's Threshold.
Asleep	They cannot use Movement, Action, Bonus Action or Reaction.	—	Spirit against the source's Threshold. Taking damage or an effect explicitly waking the target normally ends the Status.
Immobilised	Movement is 0. The character can continue taking other permitted actions.	—	Strength or Technique, depending on how they try to break free, against the source's Threshold or the restraint's specific Threshold. A Grapple resolved by a contest keeps its own procedure.
Restrained	The character cannot voluntarily move away from the creature or effect restraining them.	—	Normally an opposed Strength Check against the source of the Grapple; it does not automatically use the Threshold table. A specific procedure, such as Mechanical Trap, takes precedence.
Crashed	The character has been knocked to the ground. They cannot move normally until they get up.	—	No general Save to get up: spend 1 Action. If an ability explicitly grants a Save to avoid Crashed, use the source's Threshold.

6.13.1 · A STATUS AND ITS CAUSE

The Status applied to a character and the cause producing it are two different elements.

An effect allowing a negative Status to be removed normally removes only a removable Status.

A Status is removable when it can cease without first removing a physical, environmental or chemical cause that continues imposing it.

If the cause remains present, generic Status removal does not automatically destroy, neutralise or modify that cause.

EXAMPLES

- A character Blinded by a momentary flash can normally remove Blinded.
- A character Blinded because their eyes are covered by a blindfold does not regain sight through generic Status removal: they must first uncover their eyes.
- Permanent loss of an eye is not an ordinary Blinded Status, but a Persistent Consequence.
- A character Immobilised by chains is not freed by an effect removing a Status: the chains must be opened, broken or removed in another way.

- A character Blinded by a persistent cloud can momentarily remove the Status only if the effect allows it, but the cloud may apply it again under its own rules.
- Removing Poisoned does not automatically neutralise the substance in the body. If the poison continues applying its effects, it must be neutralised with an antidote or another appropriate ability.

When an ability explicitly treats the cause too — for example, Medicine stopping bleeding or an antidote neutralising a toxin — it can also remove the associated Status.

REPEATED STATUSES

The same Status does not automatically multiply its effects.

Two identical applications of Bleeding, Stunned, Blinded or another Status do not produce two copies of the same penalty or damage. If they have different durations, retain the longest duration still applicable.

Different effects producing the same Status can nevertheless retain their specific properties separately.

In particular, different poisons can be active at the same time. Each poison keeps its own damage, Threshold, duration and any additional effects.

Applying the same poison multiple times does not automatically multiply a single ongoing effect, however, unless the poison's description explicitly states otherwise.

Different Statuses can coexist as normal.

Downed is not a Status. The Downed condition caused by reaching 0 HP follows the rules of § 6.12 and must not be confused with Crashed.

6.14 · TERRAIN AND COVER

The environment can modify combatants' Movement options and defences.

DIFFICULT TERRAIN

Difficult Terrain requires double Movement.

A character with 10 metres can cross only 5 of them while moving over difficult terrain.

A Charge cannot be performed through Difficult Terrain.

COVER

COVER	BENEFIT
Partial	PD +2
Full	PD +4

A barrel, a ship's side or the corner of a building can offer Partial Cover.

Full Cover can also block the line of fire. The GM determines whether the attack is physically possible, considering any Techniques that allow obstacles to be bypassed.

6.15 · FROM NAVAL COMBAT TO BOARDING

Battles between ships use distance bands.

TIER	DISTANCE	OPTIONS
Alongside	0–20 m	Boarding and personal combat
Under Fire	Up to 200 m	Cannon shots at full effectiveness
In Sight	Up to 600 m	Long-range cannon shots, Threshold +4
On the Horizon	Beyond 600 m	Pursuit and manoeuvres

A manoeuvre normally allows you to gain or lose one band.

When the ships reach the Alongside band, characters can begin boarding using the personal combat rules.

At that point, the character's Movement, weapon reach, Actions, Bonus Actions and Reactions become fundamental again.

The full naval battle rules are covered in the chapter devoted to the Ship.

CHAPTER 7 ·

TECHNIQUES AND THE BUILDER

On the Grand Line, two pirates can wield the same sword without fighting the same way.

One concentrates all their strength into a single slash. Another uses speed to reach the target. A third uses a Technique capable of dragging the enemy into a wall.

Techniques represent the moves a character has developed. The **Technique Builder** allows their characteristics to be defined through common rules, leaving the player free to choose a name, appearance and style of execution.

A Technique determines what the character can do. A **Special Move**, instead, combines a Technique with other abilities already possessed, without creating new ones.

THE BUILDER AND ROLE MANUALS

The Builder presented in this chapter defines the general rules used to create and resolve Techniques. Forms, Effects, templates, costs and other options describe the system's possibilities as a whole and are not automatically available in the same way to every Role.

Each Role has its own characteristics, equipment, Talents and combat methods. The relevant Role Manuals specify which Builder options are normally compatible with that Style, which require particular conditions and which can be obtained only through Talents, equipment, powers or other specific abilities.

This manual therefore provides the general structure of the Signature Move Builder; to build a Technique for a specific Role, all the restrictions and possibilities listed in the relevant Role Manual must also be observed.

When a Role's specific rule modifies or limits a general Builder rule, the specific rule takes precedence.

7.1 · WHAT IS A TECHNIQUE?

A Technique is a specific character ability usable in combat or in situations covered by its description.

Every Technique has its own identity and Grade.

For example, *Oni Giri* does not represent the general ability to use a sword: it is a particular attack developed by the character.

A TECHNIQUE'S STRUCTURE

ELEMENT	FUNCTION
Name	Identifies the move.
Attribute	Determines the die added to the Technique.
Source	Indicates where it comes from.
Form	Defines how it is performed.
Grade	Determines the Technique Die and Damage Die.
Effects	Grant specific properties.
Cost	Indicates the Stamina required.
Description	Defines the move's narrative appearance.

Techniques are created and modified through the Builder, observing the character's requirements.

7.2 · THE TECHNIQUE'S GRADE

Every Technique has a Grade expressed by a die.

Progression follows the system's general scale:

The Technique's Grade is linked to the Attribute used to perform it.

A Technique can never have a Grade higher than its associated Attribute, but can voluntarily have a lower Grade.

For example, a character with Technique d10 can have a d6 Technique, a d8 Technique or a d10 Technique. They cannot have a d12 Technique based on Technique until their Attribute reaches at least d12.

No Technique, racial or Custom, grows by spending Ability Points.

When the associated Attribute increases in Grade, the character can choose to increase a linked Technique up to the new limit as well. The increase is not compulsory: a Technique can remain at a lower Grade even when the Attribute is higher.

When the Technique's Grade increases, its Technique Die used for the roll, its Damage Die, the Effect Slots available at that Grade and the Builder effects it can access normally increase.

Effects are not acquired automatically: the Technique must be updated through the Builder, observing slots, Source, Form, requirements and costs.

THE DIE SERVES TWO FUNCTIONS:

Technique Die: added to the appropriate Attribute during the attack roll.

Damage Die: determines the base damage dealt when the Technique hits.

Both values grow together.

TECHNIQUE	ATTACK ROLL	BASE DAMAGE
d4	Attribute + d4	1d4
d6	Attribute + d6	1d6
d8	Attribute + d8	1d8
d10	Attribute + d10	1d10
d12	Attribute + d12	1d12
d20	Attribute + d20	1d20

The Damage Die can be modified by specific effect conditions, Talents and other applicable abilities. The ordinary Builder does not allow additional raw damage dice to be purchased.

ATTRIBUTE LIMIT

A Technique's Grade **cannot exceed its Attribute's Grade**.

A character with Strength d8 cannot have a Strength-based Technique of Grade d10.

To improve that Technique, they must first develop the necessary Attribute.

DEVIL FRUIT LIMIT

Techniques derived from a Devil Fruit must also respect the **Fruit Die**.

A Fruit Technique cannot exceed either its own Attribute or the Fruit Die.

If a character has Spirit d12 and Fruit Die d8, Spirit-based Fruit Techniques can reach at most **d8**.

7.3 · TECHNIQUES AT CREATION

At creation, a character has their Racial Technique and can create up to two Custom Techniques.

A Custom Technique can be created at any Grade permitted by the Attribute used.

It is therefore not obliged to start at d4.

For example, a character with Technique d8 can create their own Technique based on Technique directly at d8, or voluntarily choose to create it at d4 or d6.

Any limits imposed by the Source, Style, Fruit or other abilities involved still apply.

During the campaign, the character can create further Techniques without a universal numerical limit, provided they meet the necessary requirements and the Game Master approves their identity and compatibility.

A new Technique created during the campaign also cannot exceed the Grade of the Attribute it uses.

7.4 · SOURCES

The Source determines the Technique's origin. The selectable Sources for built Techniques are Style and Fruit.

SOURCE · STYLE

A Style Technique comes from the character's training and uses only the effects assigned to their Style (§7.8). The Technique's Grade does not automatically expand the available catalogue. Striker fights unarmed; Swordsman requires a compatible blade; Sniper uses a compatible ranged weapon; Crusher requires a compatible blunt weapon.

Effects granted by ammunition, poisons, preparations, bombs, Modules and other objects belong to the profile of the object actually used. The Builder does not create them from nothing or replace the doses, Thresholds, durations or usage methods of consumable items.

SOURCE · FRUIT

A Fruit Technique represents an application of the character's power. It can access further effects, Areas, Ranges or Persistent Zones only when the Power's Core and Fruit Sheet make that result genuinely possible and authorise its use. The GM checks compatibility with the Source.

A Zoan transformation alone does not grant an Area or Zone. Any special powers, for example those of a Mythical Zoan, follow the abilities explicitly defined on the Sheet. The Fruit does not ignore Grade, slots or ST costs except where specific rules apply.

WEAPONS AND SPECIAL DEVICES

A special weapon or Module can explicitly grant further effects or builds when its rule and function make them possible. Material capability alone does not expand the catalogue. The Technique's Grade, slots and costs are still required unless an exception is stated.

RACIAL AND HAKI TECHNIQUES

The racial Technique and Haki abilities remain sources of the character's power, but they are not created by freely choosing effects through the ordinary Builder's two Sources. Their rules depend on the Race and Haki Colour possessed.

7.5 · FORMS

The **Form** determines the Technique's main function.

FORM	FUNCTION
Single	A Technique directed at one target.
Area	A Technique affecting a portion of space, if authorised by the Source.
Displacement	A Technique devoted to mobility.
Defence	A Technique for protecting yourself.
Enhancement	A Technique that temporarily improves the character's abilities.
Song	A Technique exclusive to the Musician.

The Defence, Displacement and Song Forms use only their respective effect families. Launch, Dash and Leap can also be included in other compatible Forms, but only for Styles that possess them (§7.8.3).

AREA

The Area Form is not a universal Style option. Swordsman and Crusher can use only Close Area. Striker and Sniper have no ordinary Style Area Form.

Close Area requires minimum Grade d8 and costs 2 ST. It is a circle centred on the character, with radius equal to the actual Reach of the weapon used. It has no radius of its own and cannot receive Range. The template takes no Effect slots; its 2 ST are added to the costs of the Technique's other effects. A weapon with Reach 5 m therefore generates an Area of radius 5 m. Damage and Statuses follow the normal Area rules (§7.9.3).

Cones, lines, extended circles and distant Areas require a special Source authorising them, such as a Fruit, special weapon or another explicit ability. Area bombs, ammunition and preparations follow their own profiles.

ENHANCEMENT

The Enhancement Form uses a main Action to apply its effects. It must not be confused with activating a Talent or Haki through a Bonus Action.

DEFENSIVE USE OF ATTACKING TECHNIQUES

Using a compatible attacking Technique as Active Defence does not require the Defence Form or a Counterattack effect. It follows §6.10, using a Reaction, immediate costs

and the Technique's normal roll.

7.6 · EFFECT SLOTS

Slots determine how many effects a Technique can contain.

d4 and d6 Techniques have 0 Effect slots; d8 and d10 have 2, d12 has 3 and d20 has 4. Further abilities may provide additional slots or explicit exceptions.

TECHNIQUE GRADE	EFFECT SLOTS
d4	0
d6	0
d8	2
d10	2
d12	3
d20	4

A Technique can contain fewer effects than the maximum available. Filling every slot is not compulsory.

UNLOCKING EFFECTS

Selecting an effect requires its minimum Grade, an available slot and Style, Source and Form compatibility simultaneously. An effect's d6 requirement does not grant the Technique a slot.

In the ordinary catalogue, effects with a d6 requirement therefore normally become usable from d8 too, when the Technique has slots. An ability explicitly granting additional slots or making an effect slot-free can provide an exception.

FAMILY LIMIT

Normally, a Technique can contain only one effect per family. Enhancement effects follow the Builder's specific rules.

An Area Technique uses a single template. The template takes no slots, but retains its minimum Grade, cost and Source authorisation. A special Area can have at most one Range, which takes one slot unless explicit exceptions apply. Close Area cannot have Range.

7.7 · STAMINA COSTS

A Technique used without enhancements does not automatically require Stamina.

Additional effects have specific costs, expressed in **ST**.

When multiple effects are selected, their costs are added together according to the Builder's summary.

Some effects cost 0 ST and add no cost of their own. The total cost is the result of the Builder's summary, applying the calculation rules and any specified discounts: do not manually assign 1 ST to an effect listed at zero cost.

A Special Move does not automatically reduce these costs. Any discounts must come from Talents, equipment or other effects that explicitly provide them.

WHEN COSTS ARE PAID

Every cost required to use a Technique, Talent, ability, consumable, ammunition, dose or charge is paid when its use is declared and before its outcome is known.

A missed attack, failed Check, successful opponent Defence or subsequent interruption does not return resources already spent.

There are no automatic refunds.

A resource is returned only when an ability explicitly says so.

7.8 · EFFECT CATALOGUE

The Builder defines what a Technique does; Talents define how well the character fights in their Style. The ordinary catalogue is not universal: each Style uses only the effects listed on its own sheet.

The Technique Die already determines base damage. There are no longer ordinary effects that directly purchase +1d6, +1d8 or +1d10 Damage Die. Talents, Signatures, Haki, Fruits, weapons, Modules and ammunition may grant additional power under their own rules. The specific conditions of Charge, All or Nothing and Crash remain.

Grades indicate the minimum requirement; they do not grant slots or effects. With 0 slots at d4/d6, effects taking slots are normally usable from d8 (§7.6).

7.8.1 · SPECIAL DAMAGE

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Charge	d10	2 ST	Crusher	Skip a turn; if you are not hit, on the following turn you double the Damage Dice, attack with Advantage and ignore Cover.
All or Nothing	d12	5 ST	Swordsman	If you miss, you cannot defend against the next attack; on a Clean Hit, damage is tripled.

CHARGE IS NOT RUNNING

Charge is offensive preparation: the character forgoes the specified turn and must avoid being hit to gain the benefits on the following turn. It does not introduce a Run Action or freely double Movement.

7.8.2 · CONTROL

When a Technique effect applies a Status granting a Save, the Threshold is determined by the Technique's Grade (§1.4). This also applies to the special Blinding, Terror, Paralysis and Slumber profiles when authorised by the Source. Grapple retains the Strength contest even when applying Immobilised; Laceration and Bleeding do not grant an automatic Save. Substances retain their own specific Threshold.

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Unbalance	d6	1 ST	Striker, Crusher	Applies Off-Balance under the Status's rules.
Laceration	d6	1 ST	Swordsman, Sniper	Applies Bleeding; the same Status does not stack with itself.
Grapple	d8	1 ST/turn	Striker	Immobilises while physically sustained; Strength contest each turn.
Breakthrough	d8	2 ST	Striker, Crusher	Applies Stunned for 1 turn; grants a Save under the Status's rules.

GRAPPLE

When the Technique applies Grapple, spend 1 ST. The target remains Immobilised while you physically maintain the hold and keep paying its cost. At the start of each subsequent turn, before acting, you can spend 1 ST to sustain it; if you do not, it ends immediately. The effect's normal Strength contest is also resolved each turn. The Technique must actually allow you to grasp and hold the target.

7.8.3 · DISPLACEMENT

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Launch	d6	1 ST	Striker, Crusher	Pushes the target 3 m.
Dash	d6	1 ST	Striker, Swordsman, Sniper	Displace up to half your Movement before or after the hit.
Leap	d6	1 ST	Striker, Swordsman	Reach a distant or elevated position up to half your Movement away.

Launch, Dash and Leap can also be included in a Technique of another compatible Form, only by the listed Styles. These effects are not available to all Styles. Each effect takes its own slot, pays its own cost and retains the conditions needed to perform it.

Dash and Leap depend on the character's Movement: with Movement 10 m, the ordinary distance is up to 5 m. Pursue, Yank and Swap have been removed. Attraction requires a Source, object or ability that actually grasps and drags the target.

7.8.4 · DEFENCE

Ordinary Defence effects are available for the Defence Form.

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Guard	d8–d20	1–4 ST	Striker, Swordsman, Crusher	Increases PD until the start of the next turn according to the chosen version.
Ally Shield	d8	1 ST	Crusher	Transfers the hit directed at an ally within 5 m onto you, observing the normal Defence conditions.

GUARD · GRADE PROGRESSION

MINIMUM GRADE	VERSION	COST	PD BONUS
d8	Basic Guard	1 ST	+2
d10	Improved Guard	2 ST	+3
d12	Mastery Guard	3 ST	+4
d20	Supreme Guard	4 ST	+5

The chosen version requires at least the listed Technique Grade, within its Attribute's limit. Each higher version replaces the previous one: bonuses and costs do not add together. Guard takes one slot and lasts until the start of your next turn.

Counterattack and Parry are no longer Builder effects. A compatible attacking Technique can be used directly as Active Defence (§6.10); a compatible weapon permits an ordinary Parry. Barrier requires a Source or ability explicitly generating that protection.

7.8.5 · ENHANCEMENT

Enhancement Techniques require a main Action. Their effects last for the scene and do not use the Bonus Action reserved for active Talents and Haki.

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Fury	d8	3 ST	Striker, Crusher	For the scene: +1 step to compatible Techniques' Damage Die; PD −1.
Aim	d8	3 ST	Swordsman, Sniper	For the scene: Advantage on attack rolls with compatible Techniques.

Fury increases only the Damage Die of compatible Techniques, within the normal d20 limit: it does not increase the Technique Die for hitting, the Technique's Grade or its slots. Aim grants Advantage on the attack roll and does not increase the die.

Momentum, Toughness and Beyond the Limit have been removed from the ordinary Builder. Attributes and Skills with their own Prestige progression follow their rules; a temporary increase does not automatically grant new Talents or Prestige benefits.

7.8.6 · AREA

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Close Area	d8	2 ST	Swordsman, Crusher	Circle centred on yourself; radius equal to the weapon's actual Reach. No Range; template takes no slots.

Close Area requires minimum Grade d8 and costs 2 ST. It is a circle centred on the character, with radius equal to the actual Reach of the weapon used. It has no radius of its own and cannot receive Range. The template takes no Effect slots; its 2 ST are added to the costs of the Technique's other effects. A weapon with Reach 5 m therefore generates an Area of radius 5 m. Damage and Statuses follow the normal Area rules (§7.9.3).

7.8.7 · CHAINED

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Crash	d8	2 ST	Striker, Crusher	If the target collides with a surface, obstacle or creature, they take +1d8 damage.
Ricochet	d10	2 ST	Sniper	Second target within 5 m of the first; half damage.
Chain	d12	2 ST	Swordsman, Sniper	Up to three targets in a line: full damage, half, half of the second.

These effects take slots and follow the conditions of §7.11. Hook has been removed.

7.8.8 · PROFILES FOR SPECIAL SOURCES

Blinding, Terror, Paralysis, Slumber, Attraction and Barrier are reference profiles: they do not belong to the ordinary catalogue of any Style. They can be selected only if a Source or ability explicitly grants them. Consumable objects instead apply their own profiles.

SPECIAL PROFILE	MIN. GRADE	COST	HOW IT WORKS
Blinding	d8	1 ST	Applies Blinded; grants a Save.
Terror	d8	1 ST	Applies Terrified; grants a Save under the Status's rules.
Paralysis	d12	2 ST	Applies Paralysed for 1 turn; grants a Save.
Slumber	d12	2 ST	Applies Asleep; grants a Save.
Attraction	d8	1 ST	Drags the target 3 m towards you, if the Source can grasp them.
Barrier	d8	1 ST	Grants Cover to you and allies within 5 m, if the Source generates the protection.

Poison uses a dose with its own effects, Threshold, duration and usage method. Heavy Strike, Overload and Annihilating Blow have been removed only as ordinary effects: independent Talents and abilities with the same names keep their own rules.

7.9 · AREA TECHNIQUES

The Area Form affects a portion of space. Access depends on the Style or a special Source and is not universal.

STYLE CLOSE AREA

Swordsman and Crusher can build only Close Area around their own position. Striker and Sniper have no ordinary Style Area Form.

Close Area requires minimum Grade d8 and costs 2 ST. It is a circle centred on the character, with radius equal to the actual Reach of the weapon used. It has no radius of its own and cannot receive Range. The template takes no Effect slots; its 2 ST are added to the costs of the Technique's other effects. A weapon with Reach 5 m therefore generates an Area of radius 5 m. Damage and Statuses follow the normal Area rules (§7.9.3).

Sovereign Slash does not project Close Area at a distance. Titanic Wave, Seismic Wave and other Prestige propagations retain their own templates, conditions and costs, distinct from the Area Form.

SPECIAL AREAS

Cones, lines, extended circles, Ranges and other Area profiles are available only when a special Source makes them possible and authorises their construction. A Fruit or special weapon can grant the following templates according to its description, observing Grade, slots and costs. Bombs, ammunition, preparations and other usable items apply their own profiles directly.

7.9.1 · SPECIAL AREA TEMPLATES

EFFECT	MIN. GRADE	ST	AREA
Breath	d6	0	5 m cone
Wave	d8	1	10 m cone
Tide	d12	3	20 m cone
Furrow	d6	0	10 m line, approximately 1 m wide
Lance	d10	2	20 m line
Rift	d12	4	40 m line
Burst	d8	1	Circle of radius 3 m
Explosion	d10	2	Circle of radius 5 m
Detonation	d12	4	Circle of radius 10 m
Cataclysm	d20	6	Circle of radius 20 m

A Technique contains only one template, which takes no slots but retains its own cost and Grade requirement. These templates do not replace Close Area in the ordinary catalogue.

7.9.2 · SPECIAL AREA RANGE

Range determines how far away the origin of a special Area authorised by the Source can be placed.

EFFECT	MIN. GRADE	ST	DISTANCE
Short Range	d6	1	Up to 10 m
Medium Range	d8	2	Up to 20 m
Long Range	d10	3	Up to 40 m

Range is optional and takes one Effect slot. Without Range, the special Area starts from the character and can affect them directly. Close Area cannot receive Range.

Only a special Area with Range can be used beyond its distance band with the Threshold increased by 4, if compatible with the Source. This rule does not project

Close Area or grant greater range to Sniper weapons: that comes from the weapon and abilities extending it.

7.9.3 · AREA DAMAGE AND STATUSES

Targets affected by the Area Technique take half damage. For Statuses applied through the Area that grant a Save, the Threshold is determined by the Grade of the Technique generating the Area. Bleeding, substances and Grapples retain their specific procedures. These rules also apply to Close Area unless a specific ability explicitly provides an exception.

7.9.4 · EYE OF THE STORM

Special profile: d12, 1 ST, one Effect slot unless explicit exceptions apply. Allows you to choose which targets are not hit by an already authorised Area Technique. It does not itself grant access to the Area Form or expand the Styles' ordinary catalogue. The None of My Own Talent modifies slots, cost and requirements for Fruit Techniques under its own rules.

7.10 · PERSISTENT ZONES

Some Techniques do not end at the moment of impact. A poisonous cloud can remain suspended over the deck, a fire can keep burning or a mass of mud can turn the ground into a trap.

These effects are called Persistent Zones.

A Persistent Zone is built through a Technique with the Area Form. It uses the template chosen for that Technique and inherits its dimensions.

A Zone cannot be assigned a size independent of the Area generating it.

7.10.1 · SOURCE REQUIREMENTS

Persistent Zones are special Source effects and do not belong to the Styles' ordinary catalogue. To create one through a Technique, the Source must be able to actually leave matter, energy or a persistent condition in the environment and explicitly authorise this use.

The GM checks compatibility with the power or the design of the special weapon or device. Merely having an Area does not authorise a Zone; Grade, slots and costs remain required.

SOURCE	OPTIONS
Logia	If the element and Sheet authorise a persistent Zone.
Paramecia	If the power and Sheet authorise a persistent condition.
Zoan	Transformation alone does not grant Zones; any special powers require authorisation on the Sheet.
Special weapon or device	If its rule and design explicitly grant a Zone. Consumables use their own profiles.

A smoke Logia could create a Curtain; an adhesive Paramecia could generate a Prison, if its Sheet authorises these applications. Bombs, smoke bombs, preparations and poisons creating a zone apply their own profiles directly and are not rebuilt with the Builder.

The mechanical effect must be compatible with what the Technique produces in the story.

7.10.2 · PERSISTENT ZONE CATALOGUE

Altered Ground, Quagmire, Curtain and Prison remain reference profiles for special Sources, not options a Style can freely purchase.

EFFECT	MINIMUM GRADE	COST	HOW IT WORKS
Altered Ground	d8	2 ST	Deals 1d6 damage to anyone in the Zone at the start of their turn.
Altered Ground Lv2	d10	3 ST	Deals 2d6 damage at the start of the turn.
Altered Ground Lv3	d12	4 ST	Deals 3d6 damage at the start of the turn.
Quagmire	d8	1 ST	Creates Difficult Terrain: Movement halved and Charge cannot be performed.
Curtain	d8	1 ST	Blocks sight. Anyone inside trying to aim outside is treated as Blinded.
Prison	d12	2 ST	Restrains anyone in the Zone. Leaving requires a successful Save.

ALTERED GROUND

Altered Ground deals damage at the start of the turns of creatures in the Zone.

The damage depends on the selected effect level.

The three levels are alternatives within the same family: they cannot be freely added together to accumulate damage.

Example: a Technique creates a circle of flames with Altered Ground Lv2. An enemy in the Zone at the start of their turn takes 2d6 damage.

QUAGMIRE

Quagmire makes crossing the Zone difficult.

Movement is halved and Charge cannot be performed within it.

The terrain's appearance depends on the Source: it could be quicksand, uneven ice, debris or a substance produced by a Fruit.

CURTAIN

Curtain blocks visibility.

Anyone inside it is treated as Blinded when trying to aim outside.

The Curtain is not automatically a physical barrier: blocking sight does not mean blocking passage.

PRISON

Prison restrains targets present in the Zone.

A trapped character must succeed on a Save using the Attribute consistent with the prison's form against the Threshold determined by the Technique's Grade (§1.4). A specific sheet may list a different Attribute, Threshold or procedure.

The prison's actual form depends on the Technique: roots, stone, ice, adhesive matter or other compatible elements.

7.11 · CHAINED EFFECTS

The ordinary Chained Effects are Crash, Ricochet and Chain. Hook has been removed. The catalogue remains limited to the listed Styles.

EFFECT	MIN. GRADE	COST	STYLE	HOW IT WORKS
Crash	d8	2 ST	Striker, Crusher	If the target collides with a surface, obstacle or creature, they take +1d8 damage.
Ricochet	d10	2 ST	Sniper	Second target within 5 m of the first; half damage.
Chain	d12	2 ST	Swordsman, Sniper	Up to three targets in a line: full damage, half, half of the second.

7.11.1 · CRASH

Crash (d8, 2 ST, Striker/Crusher) deals +1d8 damage if the target collides with a surface, obstacle or another creature. It suits a Technique that also has Launch: the additional die requires a valid collision and is not a generic damage purchase.

COMBINATION · LAUNCH + CRASH

HARBOUR IMPACT

Crusher Technique d8 with Launch (1 ST) + Crash (2 ST): total effect cost 3 ST and 2 slots occupied.

Make the normal attack roll. If the attack hits, it deals the normal Damage Die and pushes the target 3 m. If Launch causes a valid collision, it adds 1d8 damage.

Launch belongs to the Displacement family, Crash to Chained Effects. The combination observes the ordinary limit of one effect per family and the d8 Technique's 2 slots.

7.11.2 · RICOCHET

Ricochet (d10, 2 ST, Sniper) allows the shot to reach a second target within 5 m of the first, dealing half damage. It grants no further targets; normal attack and defence conditions still apply.

7.11.3 · CHAIN

Chain (d12, 2 ST, Swordsman/Sniper) reaches up to three targets in a line. Make separate attack rolls; damage is rolled only once.

TARGET	DAMAGE TAKEN
First	Full damage
Second	Half damage
Third	Half the second target's damage

Example: with 16 damage, the targets take 16, 8 and 4 respectively, provided their respective attacks hit. Chain does not automatically extend the weapon's or Source's reach.

7.12 · MUSICIAN MELODIES

The Musician has an exclusive category of Techniques: Songs.

A Song is built by choosing the Song Form and a Melody from its Catalogue.

Each Technique of this type can contain only one Melody.

Songs do not use the normal attack roll.

SONGS RULE

Activation: the Musician spends their Action and the Stamina listed by the Melody.

Allies: automatically receive the effect without making any rolls.

Enemies: make a Save when the Melody requires it.

A Song does not trigger the Musician's Signature through a +4 margin, since the Musician does not make a roll to perform it.

SONG THRESHOLDS

When a Song requires a Save, its Threshold is determined by the musical instrument's Grade actually used.

INSTRUMENT GRADE	THRESHOLD
d4	3
d6	4
d8	5
d10	6
d12	7
d20	11

The instrument's usable Grade cannot exceed Art.

Example: a Musician with Art d8 who owns a d12 instrument temporarily uses that instrument as d8; their Songs therefore have Threshold 5.

The voice is always available as a d4 instrument and therefore normally produces Threshold 3.

The Save uses the Attribute specified by the Melody or applied Status.

If the Melody specifies no Attribute but acts on the target's will, emotions or mind, normally use Spirit.

7.12.1 · MELODY CATALOGUE

MELODY	MINIMUM GRADE	COST	EFFECT
Tune of Vigour	d6	2 ST	An ally who can hear you recovers 1d6 ST. Each character benefits only once per scene; in the same scene, the cost increases by +1 ST for each different target that has already benefited. See Tune of Vigour below.
Call	d6	1 ST	Enemies within 20 metres who hear you must attack you or attack other targets with Disadvantage. Save.
War March	d6	2 ST + 1 ST/turn	Sustained Song: one chosen ally gains +1d4 to attacks while you keep playing.
Counterson g	d8	1 ST	Negates Terror, Slumber or charm on allies.
Mocking Requiem	d8	1 ST	One enemy suffers Disadvantage on their next roll. Save.
Tempo	d8	2 ST	One ally moves their Initiative immediately after yours for the rest of combat.
Crescendo	d10	2 ST	One ally's next Technique costs 2 ST less, to a minimum of 1 ST.
Lullaby	d10	4 ST	Enemies within 20 metres who hear you become Asleep if they fail their Save. Deals no damage.
Overwhelming Solo	d10	5 ST	Listening allies recover 1d6 ST and gain +1d6 to their attack roll. +1 ST for every additional use in the same scene.

MELODY	MINIMUM GRADE	COST	EFFECT
Crew Anthem	d12	5 ST	For the scene, each companion chooses one of their dice and rolls it twice, keeping the better result.
Shipboard Song	d12	4 ST	For the scene, every companion at a naval station adds +1 die to their station's roll.
Funeral March	d12	3 ST + 1 ST/turn	Requires the Funeral March Talent. Sustained Song: every enemy within 10 metres who hears you makes a Spirit Save; those who fail are Terrified while they remain within reach, hear you and you keep playing.
Song of the Soul	d20	6 ST	Supreme Talent · Once per scene: crew members who can hear you, including the Musician, restore Stamina to its maximum. The same crew benefits only once per scene.

Melodies apply only the listed effects. A Song restoring Stamina does not automatically restore Hit Points too.

TUNE OF VIGOUR

d6 · 2 ST

An ally who can hear you recovers 1d6 ST.

The same character can benefit from Tune of Vigour only once per scene, regardless of the number of Musicians present.

If you use the Tune on a new target during the same scene, the cost increases by +1 ST for each different target who already benefited through your previous performances.

Example:

- First companion → 2 ST.
- Second companion → 3 ST.
- Third companion → 4 ST.

The Musician can choose themself as the target, but even then can benefit from the Tune only once per scene.

Recovery cannot exceed Maximum ST.

The Tune of Vigour limit does not apply to Overwhelming Solo: they are different Melodies. Any limits and cost increases for Overwhelming Solo remain those listed on its sheet.

SUSTAINED SONGS

Only a Melody explicitly labelled a Sustained Song, or whose text states it continues while the Musician plays, requires upkeep.

Performing the Song normally requires:

- The Action.
- The initial cost listed by the Melody.

Starting from the next turn, sustaining a Sustained Song normally requires:

- 1 ST per turn.
- The Musician's Action.

Paying upkeep is not a new activation and does not apply the Melody's initial effects again.

Counterpoint · Basic removes the requirement to use the Action to sustain the Song: the Musician can act as normal while continuing to play.

Counterpoint · Improved allows two Songs to be sustained at once.

Counterpoint · Mastery removes the ST upkeep cost.

A Sustained Song ends immediately if:

- The Musician chooses to stop it.
- They do not pay upkeep when required.
- They lose the ability to produce the necessary music.
- They lose the required instrument and cannot continue using that same means.
- They become Unconscious.
- A condition or effect physically prevents them from singing or playing.

Simply being moved, knocked to the ground or involved in combat does not automatically interrupt a Song.

Unwavering Music provides a specific exception: Stunned and being knocked to the ground do not, on their own, interrupt an ongoing Song.

If the instrument used is lost or destroyed, the Song ends. The Musician can subsequently perform a new Song using their voice or another available instrument.

REACH AND HEARING

Unless a Melody specifies a different reach, a Song has an ordinary reach of:

20 metres

Being within that distance is not enough: the recipient must also actually hear the music.

Line of sight is not required.

Thick walls, completely isolated spaces, supernatural silence or other obstacles genuinely preventing sound from reaching the target block the Song.

An open door, window or other opening may instead allow sound to spread as normal.

Underwater, a Song works only if the Musician can actually produce music and the target can perceive it through the means used.

A Den Den Mushi or another means of communication can transmit an ordinary performance, but does not automatically transmit a Song's mechanical effects unless an ability explicitly says otherwise.

7.12.2 · MUSICAL INSTRUMENTS

The Musician's instruments have a Grade expressed by a die.

Unlike weapons, they are not normally used to hit. Their Grade determines the difficulty of resisting Songs.

DIE	INSTRUMENT GRADE
d4	Basic
d6	Competent
d8	Expert
d10	Master
d12	Legend
d20	Mythic

The instrument's usable Grade cannot exceed the Musician's Art Die.

A character with Art d8 who obtains a d12 instrument cannot immediately exploit its full quality. To use the instrument fully, they must develop Art.

The voice is always an available option, with Basic Grade d4.

7.12.3 · INSTRUMENT TYPES

Each instrument type offers a particular amplification.

TYPE	AMPLIFICATION
Strings	Melodies directed at a single target cost 1 ST less, minimum 1.
Wind	Songs' reach increases from 20 to 40 metres.
Percussion	Melodies affecting the whole crew cost 1 ST less.
Bellows	Sustained Songs' upkeep is free for the first two turns.
Voice	You cannot be disarmed and no one recognises the Technique's use before it produces its effect.

Instrument type is independent of Grade: a better instrument does not automatically change its amplification.

Unusual instruments may have an additional special effect, defined by the Game Master.

7.13 · TECHNIQUE DURATION

A Technique producing a persistent effect must specify its duration.

For Area Techniques, the Builder provides the following options. They govern the persistence of Areas and Zones authorised by the Source; they do not replace the specific durations of Guard, Fury and Aim, or Grapple's per-turn upkeep.

DURATION	ADDITIONAL COST	HOW IT WORKS
One turn	0 ST	The Technique sustains the effect for one turn.
Sustain	1 ST per turn	The character pays upkeep to extend the effect.
Three turns	2 ST	The effect lasts three turns.
The whole scene	No surcharge specified	Option reserved for Grade d20 Techniques; Source requirements still apply.

Custom Techniques do not exceed d20. The requirement for the 'Whole scene' duration is d20 and does not grant the Technique a Prestige progression.

A Technique's duration does not automatically change the duration of Haki or Talents linked to it through a Special Move.

Each ability retains its own duration.

Example: a Zone can remain active for three turns, while a Talent used with the Technique may affect only the initial attack. The Zone's persistence does not extend the Talent.

7.14 · WEAPONS, MODULES AND TECHNIQUES

Weapons and Modules are the tools through which a character can perform certain Techniques.

A weapon does not generate a Technique: it performs it. The weapon's own effects are defined by the Weapon Builder and remain distinct from the Technique's effects.

A Style Technique can be linked to a compatible weapon or Module.

It cannot use both simultaneously as the means of performing the same Technique.

WEAPONS

To perform a Technique through a weapon, the character must meet its compatibility requirements, including those for Grade, Attribute and Style.

Striker Techniques are performed unarmed.

Crusher Techniques require a compatible blunt weapon.

Any special weapon effect applies under its own conditions and is not automatically transferred to the Technique merely because their two sheets are linked.

MODULES

A Module must be installed, Intact and Active to perform a Technique requiring its active Function.

A Damaged Module cannot be used to perform the Technique until it is repaired.

If the Module is Inactive, the Cyborg must make it Active under the normal Module switching rules. An ordinary Active Module switch can be made for free once during their turn.

Making a Module Active remains distinct from activating Haki and Talents.

The Module provides the Technique's physical means and any properties specified on its sheet; it does not replace the Technique Die or duplicate effects already present in the Technique.

7.15 · TECHNIQUES AND SPECIAL MOVES

A built Technique can be selected as the basis of a Special Move.

The Special Move is a combination sheet: it links abilities already owned by the character and shows their formulas, costs, conditions and any preparations.

It does not modify the individual components' rules.

7.15.1 · SPECIAL MOVE COMPONENTS

A SPECIAL MOVE CAN INCLUDE:

COMPONENT	FUNCTION
Base Technique	Determines the move performed and its effects.
One active Talent	Adds the Talent's benefits when activated.
Passive Talents	Automatically apply compatible benefits.
Haki	Provides available benefits when active and their costs are paid.
Weapon or Module	Determines the equipment used to perform the move.

The components must belong to the character and meet all their own requirements.

A Special Move can contain at most one active Talent. Multiple active Talents cannot be linked to the same move to use them simultaneously.

7.15.2 · ACTION ECONOMY

Performing an offensive Special Move normally uses the main Action.

Activating an active Talent or Haki instead requires the Bonus Action.

Each turn, the character has only one Bonus Action and must choose how to use it.

It is therefore impossible to activate an active Talent and Haki simultaneously on the same turn.

Passive Talents require no activation and apply when their conditions are met.

7.15.3 · Preparing a Special Move with Haki and a Talent

A Special Move requiring both Haki and an active Talent may require preparation across multiple turns.

EXAMPLE · PREPARED ATTACK

TURN 1

HAKI ACTIVATION

The character uses their Bonus Action to activate Haki, paying the specified cost.

The main Action remains available.

TURN 2

PERFORMING THE SPECIAL MOVE

The character keeps Haki active by paying any upkeep cost.

They use the Bonus Action to activate the Talent specified by the combination.

They use the main Action to perform the Special Move.

They apply the Technique's, active Haki's and compatible Talents' effects, observing their respective costs and limits.

If the Special Move requires Haki but no active Talent, the character can activate Haki with the Bonus Action and perform the Technique with the main Action in the same turn.

Preparing in advance does not allow a Talent to be kept beyond its natural duration.

7.15.4 · COSTS AND AVAILABILITY

Each component retains its own Stamina, PIP and other resource costs.

Haki must be active and have the required PIP available.

The active Talent must be available and observe its usage limit.

The weapon or Module must be usable.

If a component does not meet its own requirements, it cannot contribute to the Special Move.

A character can still perform the base Technique without using an unavailable additional ability, provided the Technique itself remains possible to perform.

7.15.5 · THE SPECIAL MOVE SHEET

A Special Move should clearly list the information needed to use it without consulting all the character's sheets each time.

SHEET · SPECIAL MOVE

TEMPLATE

Name: combination name.

Base Technique: Technique used and its Grade.

Executor: weapon or Module, if present.

Active Talent: at most one.

Passive Talents: compatible abilities possessed.

Haki: Colour, selected effects and required state.

Preparation: any activations to perform on previous turns.

Action: use of the main Action to perform the move.

Costs: Stamina, PIP and other required resources.

Formula: attack roll, Damage Dice and any modifiers.

Conditions: reach, target, equipment and other requirements.

The sheet is not a new source of power: it is a way to prepare and quickly consult the character's combinations during combat.

CHAPTER 8 ·

HAKI

There is a force that depends on neither muscles, weapons nor Devil Fruits. It is an individual's will taking shape, becoming perception, protection and, in the most extraordinary cases, a pressure capable of bending entire armies.

This force is called Haki.

In Grand Line Chronicles, Haki is a power the character develops during their adventure. It has a specific progression, a PIP reserve and abilities that can be used independently or linked to Special Moves.

Haki's power does not remove the need to prepare: a fighter must decide when to activate it, how long to sustain it and which effects to use.

8.1 · THE THREE HAKI COLOURS

There are three forms of Haki, called Colours.

ARMAMENT HAKI

BUSOSHOKU HAKI

Hardens the body and weapons, enhances strikes and allows Devil Fruit defences to be countered.

OBSERVATION HAKI

KENBUNSHOKU HAKI

Allows presences to be perceived, attacks anticipated and, at higher levels, glimpses of the future.

CONQUEROR'S HAKI

HAOSHOKU HAKI

A rare manifestation of will, capable of dominating the battlefield and overwhelming weaker opponents.

Armament and Observation grow through dice Grades. Conqueror's Haki instead has its own progression, divided into three levels.

8.2 · OBTAINING AND DEVELOPING HAKI

At character creation, Haki starts at None.

It may unlock during the campaign when the character's story and training justify it.

The Game Master decides when the character can acquire a Colour and authorises its progression under the advancement rules.

ARMAMENT AND OBSERVATION

These two Colours follow the normal dice scale:

D6

1 PIP

D8

2 PIP

D10

3 PIP

D12

4 PIP

D20

5 PIP

The Grade determines unlocked abilities and the maximum PIP available. The Armament and Observation dice can never exceed the Spirit Die, including Prestige. Raising Spirit increases the attainable limit, but does not automatically increase the Colours. Beyond d20, progression continues under the Prestige Manual; the reserve remains 5 PIP for each Colour.

A character with Armament d10 also has the effects of Grades d6 and d8. They do not lose earlier abilities when developing the Colour.

CONQUEROR'S HAKI

Conqueror's Haki does not use a progression die.

It is an innate power the character must possess to develop. It cannot be obtained simply by declaring a desire to train it.

Its development is measured through three levels:

LEVEL	NAME
1 PIP	Awakening
2 PIP	Dominion
3 PIP	Absolute

Access to Conqueror's Haki and its progression are established with the Game Master. Its Prestige has three distinct stages, assigned by the GM: Prestige I, Prestige II and Saikyō. It uses no die, requires no numerical Spirit thresholds and retains its ordinary maximum of 3 PIP.

8.3 · PIP

PIP represent the reserve of will the character can spend to activate and use Haki.

They are a resource separate from Stamina.

GRADE	MAXIMUM PIP
d4	0
d6	1
d8	2
d10	3
d12	4
d20	5

This progression applies to Armament and Observation.

Conqueror's Haki instead has a maximum reserve of 3 PIP, reached at Absolute level.

Each Colour has its own reserve. Armament PIP cannot be spent to pay for an Observation effect.

RECOVERING PIP

Spent PIP are recovered through a Short Rest.

Some specific effects, such as those of certain foods, may provide further recovery options.

PIP cannot be recovered beyond the maximum value of their reserve.

8.4 · ACTIVATING HAKI

To use Haki when it requires an active state, the character must first activate the corresponding Colour.

HAKI ACTIVATION

1 BONUS ACTION

1 PIP

Activating a Haki Colour requires a Bonus Action and consumes 1 PIP from that Colour's reserve. The Colour Attunement Prestige exception allows two to be activated with the same Bonus Action, or three at Spirit Saikyō: each Colour still pays its own PIP. It does not also grant the use of an active Haki effect in the same turn.

Once active, the character can use its benefits according to unlocked abilities and their costs.

Haki activation does not consume the main Action.

A character can therefore activate Armament with the Bonus Action and make an attack with their Action in the same turn.

ONE BONUS ACTION PER TURN

Activating a Colour, an active Talent and an active Haki effect (⚡) compete for the same single Bonus Action. Activating the Colour and using one of its active effects require two separate Bonus Actions, and therefore different turns.

SITUATION	ALLOWED?
Activate Haki and attack	Yes
Activate an active Talent and attack	Yes
Activate Haki and an active Talent in the same turn	No
Sustain Haki already active and activate a Talent	Yes

Two Bonus Actions cannot be used in the same turn.

If a combination requires both Haki activation and an active Talent, the character must prepare it by spreading the activations across several turns.

8.5 · SUSTAINING HAKI

Once activated, Haki can be sustained on subsequent turns by paying its cost.

ORDINARY UPKEEP

1 ST PER TURN

Sustaining Haki already active does not require a new Bonus Action.

A character sustaining Armament can use their Bonus Action to activate an active Talent.

Upkeep does not involve a new PIP activation cost: that PIP has already been paid.

If Haki ends and the character wants to use it again, they must activate it anew.

EXCEPTION · ARMAMENT D12

From Grade d12, once activated, Armament Haki no longer requires Stamina for upkeep.

It remains active until the character decides to stop it or an ability or condition causes it to end.

8.6 · PASSIVE EFFECTS AND ACTIVE EFFECTS

Each Haki Grade can unlock two types of benefits.

Passive effects apply automatically when their respective conditions are met. They do not require a Bonus Action to be spent for each effect. If they depend on active Haki, the Colour must naturally already have been activated.

Each active effect (⚡) requires a player choice, 1 Bonus Action and payment of the listed PIP cost. It cannot be activated on the same turn as an active Talent, the first activation of a Colour or another active Haki effect.

Active effects must be declared before the roll they apply to, when a roll is required.

Using an effect of already active Haki during an attack does not require the entire Colour to be activated again.

EXAMPLE

A character has Armament d10, and therefore 3 PIP.

On the first turn, they activate Haki with 1 Bonus Action and 1 PIP. They have 2 left.

On a subsequent turn, they sustain Haki by paying 1 ST and use the Bonus Action for Haki Burst, paying 1 PIP. They make the attack with the normal Action; their reserve falls to 1 PIP. They cannot also activate a Talent on the same turn.

If they sustain Haki on subsequent turns, they do not need to spend another activation PIP.

8.7 · ARMAMENT HAKI

BUSOSHOKU HAKI

Armament Haki allows you to coat your body, weapons and attacks with your will.

It can be used both offensively and defensively, and also allows the normally intangible bodies of Logia users to be hit directly, unless specific abilities state otherwise.

When Armament is active, the character can apply their Armament Die to compatible uses.

OFFENSIVE ARMAMENT

When a physical attack is enhanced by Armament, the character adds their Armament Die to damage.

+1 Armament Die to damage

The attack need not be part of a Special Move. Armament can be applied normally to a basic attack, a Technique or any other compatible ability.

A Special Move does not grant a special use of Haki: it simply represents an organised combination of abilities the character already possesses.

DEFENSIVE ARMAMENT

Armament Haki is never rolled together with Passive Defence. Passive Defence remains a fixed value and does not automatically receive the Armament Die.

When the character makes a compatible Active Defence while Armament is active, they add their Armament Die to the roll.

Compatible Active Defence = Active Defence formula + Armament Die

Example:

Strength d10 + Athletics d8 + Armament d8

As with every Active Defence, a tie favours the defender.

Defence ≥ Attack	→	**successful defence**
Defence < Attack	→	**the character is hit**

Simply using the Armament Die requires no additional PIP beyond Haki activation. The special effects listed in the progression instead require their stated cost.

8.7.1 · D6: COMPETENT

1 MAXIMUM PIP

PASSIVE · ARMAMENT CONTROL

Once activated, Armament can be sustained by paying:

1 ST per turn

Normal use of the Armament Die requires no further PIP. PIP are spent for Haki activation and special effects with a specific cost.

No additional active effect is available at this Grade.

8.7.2 · D8: EXPERT

2 MAXIMUM PIP

PASSIVE · CONDENSED ARMAMENT

When the character rolls their Armament Die to determine damage, any result below half the die's maximum value is treated as equal to half.

- Armament d8: results 1-3 count as 4.
- Armament d10: results 1-4 count as 5.
- Armament d12: results 1-5 count as 6.
- Armament d20: results 1-9 count as 10.

ACTIVE · FULL ARMOUR

1 PIP

DEFENCE

On their own turn, with Armament already active, the character prepares Full Armour by spending 1 Bonus Action and 1 PIP. They cannot activate it after being hit on an opponent's turn.

That single attack's damage is halved, rounding up.

Example: 13 damage becomes 7 damage.

The prepared protection applies to the next single attack hitting the character on subsequent enemy turns, while Armament remains active. It is consumed when it halves that damage and does not automatically protect against subsequent attacks. Preparing it again requires paying another Bonus Action and 1 PIP on their own turn.

8.7.3 · D10: MASTER

3 MAXIMUM PIP

PASSIVE · REINFORCED DEFENCE

When the character uses their Armament Die in Active Defence, they roll the Armament Die twice and keep the better result. The other Active Defence dice are rolled as normal.

ACTIVE · HAKI BURST

1 PIP

OFFENSIVE · AREA

After an attack, the character can release a burst of Haki in an area of 5 metres.

Enemies reached by the burst take half the attack's damage.

The main target continues taking the original attack's full damage as normal.

8.7.4 · D12: LEGEND

4 MAXIMUM PIP

PASSIVE · ARMAMENT MASTERY

Once activated, Armament Haki no longer requires Stamina for upkeep.

It remains active until the character decides to stop it or an ability or condition causes it to end.

ACTIVE · ARMAMENT ARMOUR

2 PIP

DEFENCE · 2 TURNS

The character concentrates Armament over their entire body.

+4 Passive Defence for 2 turns

Example: Passive Defence 11 → Passive Defence 15.

The bonus modifies only Passive Defence. It does not add dice to Active Defence.

8.7.5 · D20: MYTHIC

5 MAXIMUM PIP

PASSIVE · PERFECT ARMAMENT

Whenever the character rolls their Armament Die, they roll it twice and keep the better result.

The benefit applies to offensive and defensive uses of the Armament Die. When used in Active Defence, it naturally replaces Reinforced Defence: the die is not rolled additional times.

ACTIVE · RYOU

3 PIP · OFFENSIVE

Armament penetrates outer defences and strikes the target from within. This is narrative and describes Ryou's manifestation: it does not create a separate mechanical category of internal damage.

When you apply Ryou to a compatible physical attack, calculate the attack's total damage as normal, including every die and bonus that actually applies, then multiply the result ×2.

Ryou doubles the total only once. Do not double individual components separately and then multiply the result again.

Ryou does not make the hit automatic or prevent the target from using Passive Defence, Active Defence, Damage Reduction or other normally allowed defences, unless a specific rule states otherwise.

8.8 · OBSERVATION HAKI

KENBUNSHOKU HAKI

OBSERVATION

Observation sharpens the fighter's perception. It allows them to recognise hidden presences, identify hostile intentions and react to dangers others cannot even see.

Observation uses the same Grades and PIP progression as Armament.

Its abilities focus on perception, defence and supporting companions.

8.8.1 · D6: COMPETENT

1 MAXIMUM PIP

PASSIVE · OBSERVATION CONTROL

The character can keep Haki active by paying 1 ST per turn.

Abilities enhanced by Observation require no additional PIP unless a specific active effect is involved.

No additional special effect is available at this Grade yet.

8.8.2 · D8: EXPERT

2 MAXIMUM PIP

PASSIVE · 360° VISION

The character cannot be surprised by ordinary attacks from behind.

Attacks from behind lose the benefit of surprise.

The passive effect does not automatically make the character immune to all forms of supernatural concealment or effects with specific rules.

ACTIVE · ANTICIPATION

1 PIP

DEFENCE

The character anticipates the opponent's movement.

Add two dice of their Observation Grade to a compatible defensive roll made for a Dodge or Active Defence performed with an attacking Technique. The benefit does not automatically grant damage: any retaliatory damage requires a Talent such as Counterblow and observes all its conditions, including exceeding the opponent's roll.

Example: with Observation d8, Anticipation adds 2d8 to the compatible defensive roll.

8.8.3 · D10: MASTER

3 MAXIMUM PIP

PASSIVE · READING THE FIELD

The character perceives the position of every enemy in the scene and roughly recognises their Hit Points.

The GM can describe targets' conditions narratively: unhurt, wounded, badly wounded or near collapse.

The effect gives an approximate assessment, not necessarily every opponent's exact HP value.

ACTIVE · NAKAMA GUIDANCE

1 PIP

SUPPORT · 1 TURN

The character shares their perception of the battlefield with their companions.

For one turn, every companion in the character's line of sight adds that character's Observation Die as a bonus to their own rolls.

Example: a character with Observation d10 uses Nakama Guidance. For one turn, the affected companions receive an additional d10.

8.8.4 · D12: LEGEND

4 MAXIMUM PIP

PASSIVE · FUTURE VISION

ONCE PER SESSION

At the start of a scene, the player can ask the Game Master what is about to happen.

The GM provides a prediction consistent with imminent events.

The ability does not allow arbitrary knowledge of the entire plot or events outside the imminent scene.

ACTIVE · BRIEF FORESIGHT

2 PIP

DEFENCE · 1 TURN

For one turn, ordinary physical attacks cannot hit the character.

Attacks using Haki and Area attacks remain effective under their respective rules.

The effect is therefore not absolute immunity to every kind of damage.

8.8.5 · D20: MYTHIC

5 MAXIMUM PIP

PASSIVE · UNIVERSAL OBSERVATION

The character perceives every living being on the island.

Enemies cannot hide or prepare an ambush without the character perceiving their presence.

The ability concerns perceiving presences, not automatic knowledge of their thoughts or detailed intentions.

ACTIVE · FUTURE FORESIGHT

3 PIP

2 TURNS

For two turns, the character anticipates combat with extraordinary precision.

DURING THIS PERIOD:

Attack: their attacks ignore defence.

Defence: automatically dodges every hit.

The effect lasts two turns and must be activated by paying 3 PIP.

CONFLICT BETWEEN FUTURE FORESIGHTS

When two characters have Future Foresight active simultaneously and their automatic effects directly conflict, the Future Foresight activated first takes precedence.

The effect activated later does not cancel the earlier one.

The second Foresight nevertheless remains active and continues functioning normally against other characters and in every situation where it does not conflict with the earlier one.

Example: if the first character activates Future Foresight and the second subsequently does the same, when the first attacks the second, their effect ignoring defence takes precedence. When the second attacks the first, the automatic dodge of the Foresight activated first takes precedence instead.

8.9 · CONQUEROR'S HAKI

HAOSHOKU HAKI

Conqueror's Haki is a rare power tied to the character's innate will.

Its progression does not follow Armament and Observation dice. It has three levels, each characterised by passive abilities and, where specified, active effects.

Conqueror's Haki has a maximum of 3 PIP.

Its passive effects apply automatically when the listed conditions occur, without spending PIP for each target.

Active effects instead require their costs to be paid. When an active effect requires the Colour to be already active, the normal Haki activation cost also applies.

8.9.1 · LEVEL 1: AWAKENING

1 MAXIMUM PIP

PASSIVE · MASS STUNNING

The character's will overwhelms less resilient opponents.

All minor NPCs in the scene with HP equal to or below 15 are automatically Stunned.

No roll is required.

The effect does not automatically apply to important enemies and bosses simply because they have few HP: the target must belong to the category of minor NPCs specified by the ability.

This level grants no additional active effect.

8.9.2 · LEVEL 2: DOMINION

2 MAXIMUM PIP

PASSIVE · INTIMIDATING AURA

While enemies remain in the scene, those with Spirit below d8 suffer a penalty of:

–2 to their rolls

The benefit is automatic and requires no separate roll against each target.

ACTIVE · EMPEROR'S SHOUT

1 PIP

ONCE PER COMBAT

The character focuses their will on one opponent.

One chosen enemy loses their next Action.

The ability can also be used against a boss.

The usage limit is once per combat.

8.9.3 · LEVEL 3: ABSOLUTE

3 MAXIMUM PIP

PASSIVE · BATTLEFIELD DOMINION

At the start of combat, the character's will overwhelms minor NPCs.

Their current HP are immediately halved, rounding down.

Example: a minor NPC has 15 HP. The effect reduces them to 7.

The ability applies only once at the start of combat, not repeatedly each turn.

ACTIVE · CONQUEROR'S COATING

2 PIP

PHYSICAL ATTACK

The character concentrates Conqueror's Haki on a single physical attack, coating it completely in their will.

The effect must be declared before making the attack roll.

If the attack hits:

- the attack's Damage Dice are not rolled;
- each Damage Die automatically takes its maximum result.

Examples:

- 2d10 → 20 damage.
- 3d12 → 36 damage.
- 2d20 → 40 damage.

Any attack components that are not part of the Damage Dice follow their own rules as normal.

Conqueror's Coating does not guarantee the attack hits: the attack roll and target's defence are resolved as normal.

At Absolute Level, activating Conqueror's Haki costs 1 PIP and Conqueror's Coating costs 2: using both consumes the entire 3-PIP reserve. The character must therefore recover PIP through a Short Rest before using Conqueror's Coating again.

8.10 · HAKI AND DEVIL FRUITS

Armament Haki allows the defences normally offered by Devil Fruits to be countered.

Its most important interaction concerns Logia.

A Logia user can normally allow ordinary attacks to pass through their elemental body.

Armament instead allows their body to be hit, overcoming this ordinary intangibility.

This does not mean every Haki hit automatically cancels all the target's powers.

The Fruit's specific abilities, defensive Techniques and advanced effects explicitly providing different interactions still apply.

Haki also does not remove the rules for other Fruit weaknesses, such as the sea and Seastone.

8.11 · HAKI AND SPECIAL MOVES

A Special Move can use one or more benefits of the character's Haki.

The Special Move does not activate Haki for free or change the costs of selected effects.

To apply a benefit requiring active Haki, the corresponding Colour must have been activated.

To apply an effect costing PIP, the character must have and spend the necessary PIP.

8.11.1 · SPECIAL MOVE WITH HAKI ONLY

If a Special Move requires neither a Talent's activation nor an active Haki effect (⚡), the character can activate the Colour with the Bonus Action and perform the move with the ordinary Action in the same turn. To use a ⚡ effect, the Colour must already be active from a previous turn.

8.11.2 · SPECIAL MOVE WITH HAKI AND AN ACTIVE TALENT

If a Special Move requires both, the character must spread their activations across several turns.

8.12 · USING MULTIPLE HAKI EFFECTS

Passive effects already unlocked apply when their respective conditions are met.

Active effects consume the PIP listed in their descriptions and each requires 1 Bonus Action. Only one effect can be activated in the turn, as an alternative to an active Talent or activating a Colour.

The character must declare which effects they are using and pay their total cost.

An effect from a Grade not yet reached cannot be used.

EXAMPLE · ARMAMENT D20

A character has 5 PIP.

On the first turn, they activate Haki with 1 Bonus Action and 1 PIP. Their reserve drops to 4.

On a subsequent turn, while sustaining Haki, they use the Bonus Action for Ryou and pay 3 PIP. They make the attack with the ordinary Action and are left with 1 PIP. They cannot activate a Talent on the same turn or save Ryou for an attack on a later turn.

Activating other effects requires their PIP and the Bonus Action of another turn. Multiple active benefits can coexist only if prepared separately and still within their duration: for example, an effect lasting 2 turns can accompany a Talent activated on the next turn, provided it has not expired. PIP already spent are not paid again and the duration is not renewed.

The activation cost and special effect costs are separate. Colour activation and an active effect must happen on different turns because each requires its own Bonus Action. Colour upkeep and passive effects, instead, do not require a new Bonus Action.

8.13 · ENDING HAKI AND RECOVERY

An already active Haki Colour does not end merely because its PIP reserve reaches 0, even when the last PIP was spent to activate it.

While the character pays the Stamina required for upkeep, the Colour and its ordinary benefits remain active. If the Grade reached removes the upkeep cost, the already activated Colour can remain active even at 0 PIP without spending ST.

At 0 PIP, you cannot activate an inactive Colour or activate new effects requiring PIP. An effect already paid for retains only the duration and uses specified in its description: exhausting the reserve neither renews it nor automatically cancels it.

A Colour ends when:

- the character decides not to sustain it;
- they do not pay the required upkeep cost;
- they lose consciousness;
- they suffer a Status or effect preventing them from sustaining it, such as Stunned.

When Haki ends, benefits requiring the active Colour cease. Effects with an independent duration follow their own descriptions. Reactivating the Colour normally requires 1 Bonus Action and 1 PIP.

PIP are recovered through a Short Rest or abilities explicitly providing recovery, without exceeding the Colour's maximum. Haki does not replace Stamina: upkeep, Techniques and Talents retain their own costs.

CHAPTER 9 ·

DEVIL FRUITS

A single bite can change a pirate's fate.

Some become rubber, some transform into a legendary creature and others gain the power of a natural element. No Fruit is identical to another, but all share one feature: they grant extraordinary abilities in exchange for permanent vulnerability to the sea.

In Grand Line Chronicles, Devil Fruits are customisable powers. The player defines their concept with the Game Master, while the Fruit Die, Talents and Technique Builder govern their growth.

The Fruit does not replace the character's Combat Style. It adds to their abilities, allowing them to develop a unique way of fighting.

Devil Fruit Manual. This chapter summarises Fruit rules. The Fruit Identity Sheet, the explanation and definitive clarification of every Talent, Trait and Signature, and the guidelines for Combat Form and Awakening are in the Devil Fruit Manual (Library · Volume 04): consult that manual for more detail; it takes precedence in the event of differences.

9.1 · OBTAINING A DEVIL FRUIT

Having a Devil Fruit is optional and requires the Game Master's approval.

The character can start the campaign with a Fruit or obtain one during the adventure.

When acquiring the power, the player must define its fundamental characteristics.

CHARACTERISTIC	DESCRIPTION
Name	Fruit name.
Type	Paramecia, Logia or Zoan.
Description	Nature of the power and its possibilities.
Fruit Die	Grade of mastery over the power.
Trait	Fundamental ability associated with the type.
Signature	Effect triggered under the specified conditions.
Talents	Abilities acquired through growth.

The Fruit need not be combat-oriented.

An apparently modest power may prove useful in exploration, navigation, creating objects or social interactions.

Its effectiveness depends on the applications the character develops.

9.2 · THE THREE FRUIT TYPES

Devil Fruits belong to three categories.

PARAMECIA

THE UNIQUE POWER

Grants an extraordinary property to the body, allows a substance to be produced or modifies matter and the environment.

LOGIA

THE ELEMENT

Allows the user to become and control a natural element, gaining its properties.

ZOAN

TRANSFORMATION

Allows an animal form and a hybrid form to be assumed, changing the body and physical abilities.

Each type has a specific Trait, Signature and Talent Tree.

Mythical and Ancient Fruits belong to the Zoan category, but may gain special characteristics through the abilities in their Tree.

9.3 · WEAKNESSES AND INTERACTIONS

Devil Fruit users share two fundamental weaknesses: the sea and Agalmatolite, known as Seastone.

THE SEA

When they fall into water and remain submerged, the user loses all strength, cannot swim and is left helpless. They cannot take main Actions, Bonus Actions or Reactions, or make voluntary Movement. They need to be rescued.

A Fish-Man or Merman can continue breathing underwater and does not drown, but still loses the ability to swim and remains helpless on the seabed until freed from the water.

AGALMATOLITE · SEASTONE

Contact with Seastone deprives the user of their actions, like immersion. Contact suffered during an opponent's turn makes them lose the actions of their next turn, including their main Action, Bonus Action and Reactions. If contact persists, the character continues losing all actions and cannot move voluntarily until freed.

A single contact does not impose permanent paralysis: once the next turn has been lost, if they are no longer touching Seastone, the character can act again. Continuous contact instead renews the condition.

HAKI AND INTERACTION WITH FRUITS

Haki is not a weakness equivalent to the sea or Seastone. Armament allows Logia bodies to be hit despite ordinary intangibility, under the Colour's rules, but does not automatically remove actions or indiscriminately negate all Fruit properties or powers.

9.4 · THE FRUIT DIE

The Fruit Die represents the character's level of mastery.

It does not determine which power they possess, but how well they can control it.

An inexperienced user might produce their element without being able to shape it precisely. An expert might instead employ it in completely different ways.

PROGRESSION FOLLOWS THIS SCALE:

DIE	MASTERY
d4	The power has manifested.
d6	The character begins to understand it.
d8	Reliable control.
d10	Advanced mastery.
d12	Mastery.
d20	The pinnacle of the power, required for Awakening.

The Fruit Die normally starts at d4.

9.4.1 · HOW IT GROWS

The Fruit Die is not increased by spending Ability Points.

The Game Master determines its advancement when the character's growth justifies it.

An improvement may be linked to training, a discovery about how the Fruit works, a significant defeat or the end of a story arc.

The die should not increase automatically after every combat.

9.4.2 · WHAT IT DETERMINES

The Fruit Die serves two functions.

Limits Fruit Techniques: no Technique using the Fruit as its Source can exceed its Grade.

Unlocks Fruit Talents: each Tree tier requires a minimum mastery.

TALENT PROGRESSION

d4–d6 · The Gift
The character explores the power's initial possibilities.

d8–d10 · Control
The Fruit becomes more versatile and efficient.

d12 · Mastery
The character develops advanced applications.

d20 · Awakening
Reaching the power's highest manifestation becomes possible.

9.5 · BUILDING FRUIT TECHNIQUES

Fruit Techniques use the Builder in Chapter 7, but the Fruit is a special Source. Effects must be consistent with the Power's Core and Identity Sheet. When the Fruit's nature permits it, the GM can authorise effects, Areas, Ranges or Persistent Zones outside a Style's ordinary catalogue. Authorisation does not remove Grade, slots or ST costs: a Fruit must be able to actually produce the result.

To create one, the player selects Fruit as the Source and defines its Attribute, Form, Grade and effects.

The Technique must meet three fundamental conditions:

Its Grade cannot exceed the Die of the Attribute used.

Its Grade cannot exceed the Fruit Die.

The chosen effects must be consistent with the power's nature and the Builder rules.

The Game Master checks the Technique's narrative compatibility.

A Fruit capable of producing wax can create barriers and structures. It cannot freely produce lightning merely because the Catalogue contains an effect suited to an electrical attack.

D4 AND D6 TECHNIQUES

d4 and d6 Techniques have 0 Effect slots and cannot select effects taking slots unless an ability explicitly provides an exception.

Effects taking slots normally become available from Grade d8, observing their requirements. Source-authorised templates take no slots, but retain their own minimum Grade and cost (§7.9).

This limit concerns built Techniques. It does not remove the Fruit's natural Trait or the abilities of Talents already possessed.

COSTS

Fruit Techniques pay the Stamina required by their effects.

Having a Fruit does not automatically make all Techniques derived from it free.

Specific Talents can reduce or remove certain costs.

When an effect included in a Fruit Technique applies a Status granting a Save, its Threshold is determined by the Technique's Grade, not directly by the Fruit Die (§1.4 of the Game Manual).

9.6 · FRUIT TALENTS

Each Fruit type has a dedicated Tree.

Talents are acquired through Upgrades, choosing among those available based on the Fruit Die and observing any prerequisites.

Reaching a Grade unlocks access to Talents, but does not automatically grant all those in the tier.

Talents can represent passive abilities, voluntary activations, Reactions or particular exceptions.

In the V2 system, a Talent requiring voluntary activation normally uses the Bonus Action. When its description specifies a Reaction, free activation or another explicit procedure, that rule takes precedence.

Passive effects apply automatically when their conditions are met.

Every Fruit Talent is explained and clarified in the Devil Fruit Manual, which takes precedence over this summary in case of doubt.

9.7 · PARAMECIA

PARAMECIA

THE UNIQUE POWER

Paramecia include extremely diverse powers. They can alter the body, produce matter or affect the environment.

Their fundamental principle is creative freedom: the player and Game Master define a recognisable power and develop its applications without turning it into an unlimited collection of unrelated abilities.

9.7.1 · TRAIT: THE UNIQUE POWER

ALWAYS ACTIVE

The character alters body, matter or the environment through a power agreed with the Game Master.

The Fruit's nature determines what the character can do.

There is no universal table assigning every Paramecia the same set of effects.

The Trait represents the Fruit's fundamental properties, not an unlock to purchase.

9.7.2 · SIGNATURE: THE POWER'S MARK

CLEAN HIT · MARGIN +4

When the character achieves a Clean Hit with a Fruit Technique, the power leaves an additional consequence consistent with its nature.

It may be an alteration to the terrain, a Status or a zone that remains after impact.

The actual application is defined with the Game Master according to the power possessed.

The Signature does not grant the player permanent access to every Catalogue effect: it represents the Clean Hit's special consequence.

If the Signature's consequence is a Status granting a Save, the Threshold is determined by the Fruit Die (§1.4 of the Game Manual), because the Status is produced by the Signature and not selected as a Technique effect. The Technique's Clean Hit is still required.

9.7.3 · D4–D6: THE GIFT

VERSATILE POWER

PASSIVE

Unlock a new Fruit application.

You might learn to use the power at a distance, apply it to your body or employ it for defence.

The new application allows an entire family of Techniques to be developed that you could not previously build.

The choice must be consistent with the Fruit's original concept.

When the Talent is acquired, the new Application is chosen together with the GM and recorded on the Fruit Identity Sheet: it must follow logically from the Power's Core.

The Talent grants only one new direction, not all of them at once, and does not allow new properties to be invented each time it is used.

FINE CONTROL

PASSIVE · OUTSIDE COMBAT

Add +1 die to appropriate manipulation, traversal, protection and stealth checks when you use the Fruit.

The bonus applies only to activities in which the power actually provides an advantage.

Fine Control grants no new Applications: the character must already be able to perform the action according to their Fruit Sheet.

PASSIVE GIFT

PASSIVE · PERMANENT

The Fruit grants you a permanent property consistent with its nature.

This property requires neither Stamina nor the use of a Technique.

For example, a rubber body does not conduct electricity.

The player and GM agree exactly which property is gained and what consequences it produces.

Once defined, it remains a permanent characteristic of the character.

The property is chosen when the Talent is acquired, recorded on the Fruit Sheet and must follow directly from the power's nature.

It cannot amount to a generic immunity to damage, permanent Attribute bonuses, existing Talents or abilities that do not truly follow from the nature of the Fruit. Once chosen, it does not change from one scene to another.

POWER REFLEX

REACTION

1 TIME PER BATTLE

0 ST

When you or an ally within 5 metres are about to take damage from an attack, the Fruit reacts instinctively.

All of the attack's Damage Dice are reduced by:

1 Grade

Progression:

d20	→	**d12**
d12	→	**d10**
d10	→	**d8**
d8	→	**d6**
d6	→	**d4**

d4 is the minimum.

Power Reflex modifies Damage Dice only.

It modifies the attack's Damage Dice, not the attack roll, and does not cancel Statuses, Displacements or other attack effects unless they expressly depend on damage.

9.7.4 · D8–D10: CONTROL

DUAL USE

2 ST

ACTIVE TALENT · BONUS ACTION

During the same Action, you can perform two different applications of your Fruit.

Only one of the two can be an attack or directly produce an offensive effect.

The second application must be narrative or useful and may, for example, allow you to manipulate an object, produce a small amount of your substance, change an element of the scene or use another non-offensive property of the Fruit.

Dual Use does not grant two attacks, two offensive Techniques or two separate applications of damage during the same Action.

The Talent costs 2 ST only once.

Any Technique used pays its own costs normally.

The second application pays a separate cost only if the ability used already specifies one.

WHAT REMAINS

PASSIVE

The durations of Fruit Techniques improve at no additional cost.

ORIGINAL DURATION	BENEFIT
One turn	Becomes three turns, without paying the additional 2 ST.
Sustain	The first turn of upkeep is free.

The Talent modifies only the durations to which it applies.

What Remains modifies only a mechanical duration specified by the Technique and does not make what the Fruit creates permanent: if the Technique has neither a duration nor upkeep, the Talent provides no benefit.

The natural permanence of matter recorded on the Fruit Sheet remains a separate property.

NONE OF MY OWN

PASSIVE

The Eye of the Storm effect becomes more accessible for your Fruit Techniques. It does not grant the Area Form on its own: it applies only to a Technique that already has a valid Area according to the nature of the power and the Source's rules.

WHEN YOU USE IT:

It takes up no slots.

It costs no Stamina.

It can be selected even before the normal d12 requirement.

The Fruit recognises the character's companions and allows them to be excluded from the effects of their Area Techniques.

The player chooses which targets in the Area are excluded. The Talent protects against the direct consequences of the Technique, not independent environmental consequences that may arise later in the scene.

9.7.5 · D12: MASTERY

NATURAL REACH

PASSIVE

Your Fruit has reached such a level of control that projecting the power becomes more efficient.

YOU GAIN THREE BENEFITS:

Range effects for Fruit Techniques are free and take up no slots.

Area Techniques increase their radius by one step.

The Chain effect costs 1 ST less.

Natural Reach does not create a Range, an Area or a Chain that the Fruit could not produce. The benefits apply only to Fruit Techniques already authorised by the Source; they remove the cost of the Range actually selected without granting it automatically.

Natural Reach modifies Techniques, not the ordinary Reach on the Fruit Sheet, and does not allow free narrative uses beyond that Reach.

Area Techniques increase by one step on the normal template progression; Chain does not fall below the normal applicable minimum.

COMBAT FORM

ACTIVE TALENT · BONUS ACTION

The character continuously uses their Fruit on themselves, turning one of its properties into a personal mode of combat.

When the Talent is acquired, player and Game Master define:

MANIFESTATION

How the power changes the character's body, movements or fighting style.

BENEFIT

The mechanical advantage gained while the Form is active.

COST

The Stamina required to activate or maintain it.

LIMITATIONS

Any conditions required to use the Form.

The benefit must follow from an ability the Fruit already possesses and must primarily concern the character themselves.

For example, it may improve mobility, offensive capability, defensive capability or another personal characteristic consistent with the power.

Combat Form grants no new Fruit Application and does not normally allow the environment to be changed, target categories to be expanded or important structural Limitations to be bypassed.

Once defined, the Form remains unchanged and cannot change its benefit each time it is used.

Normally, the Form can remain active for the entire scene as long as the character pays its cost: if they can no longer pay the required upkeep, it ends.

The complete guideline for building a Combat Form can be found in the Devil Fruits Manual.

NO BACKLASH

PASSIVE

Fruit Techniques cost:

1 ST less

to a minimum of:

1 ST.

In addition, you no longer suffer the natural Backlashes recorded on the Fruit Identity Sheet.

No Backlash does not remove:

- structural Limitations;
- contact or visibility requirements;
- Reach;
- maximum quantities;
- upkeep;
- Technique conditions;
- costs belonging to other Talents;
- the fundamental weaknesses of Devil Fruits.

No Backlash removes what the Fruit involuntarily does to its user: it does not remove costs deliberately specified by the rules or consequences caused by enemies or the environment.

INSTINCTIVE POWER

ONCE PER SCENE

EXCEPTION TO ACTIONS

You can use a Fruit move without spending your main Action, even outside your turn.

The ability modifies the Action cost of the move, but does not automatically remove its Stamina cost.

The move continues to pay Stamina, any PIP or other resources, upkeep, requirements and conditions normally.

Instinctive Power does not grant an additional turn, Movement, a second Bonus Action or a second Reaction: it is only an exception to the Action cost of that single move.

SECOND NATURE

PREREQUISITE: VERSATILE POWER

PASSIVE

The Fruit reveals a second family of applications, completely different from the first.

The new possibility is agreed with the Game Master.

It does not necessarily represent an increase in the numerical power of the Fruit: it expands its possibilities.

Example: a power initially used to change your own body could develop a consistent mode that also acts on external materials, if the concept of the Fruit allows it.

Versatile Power grants a new Application; Second Nature grants a new family of Applications, recorded on the Identity Sheet and usable as a narrative basis for new Techniques.

Second Nature does not automatically grant Catalogue effects, damage, Statuses or bonuses.

9.7.6 · D20: AWAKENING

AWAKENING · PARAMECIA

ULTIMATE

Requirements: Fruit Die d20, Ambition and permission from the Game Master.

Awakening represents the ultimate evolution of the Power's Core.

The fundamental principle of the Paramecia reaches a scale, freedom or depth that is normally impossible.

Awakening must be completely defined before its first activation using the **Awakening Guideline** in the Devil Fruits Manual.

The following must be established:

- Name;
- Awakened Principle;
- Manifestation;
- Families involved;
- Agreed Benefits;
- Area or Reach, where relevant;

- Valid targets;
- Permanence;
- Limitations overcome;
- Limitations still in force.

The available Families are:

- **Origin**
- **Costs / Discounts**
- **Expansion**
- **Domain**
- **Defence**
- **Attack**
- **Control**

The Families do not automatically grant an effect.

They indicate which aspect of the Fruit is taken beyond its normal limits.

Awakening does not replace Techniques.

When a manifestation is intended to produce damage, Statuses, Zones, Displacements or other effects governed by the system, it must use an appropriate Technique or have an Awakening Benefit that expressly specifies that consequence.

Awakening normally lasts:

1 scene.

AT THE END OF THE SCENE:

- **Stamina falls to 0;**
- **the character cannot use the Fruit until their next Long Rest.**

Voluntarily ending Awakening before the end of the scene does not avoid these consequences.

9.8 · LOGIA

LOGIA

THE ELEMENT

Logia allow you to become and control a natural element.

The nature of the element permanently influences the character's body and their possibilities for movement, attack and defence.

9.8.1 · TRAIT: THE ELEMENT

ALWAYS ACTIVE

The character becomes and controls their element.

They can use it to strike, even at range, and their attacks naturally possess its characteristics.

THE ELEMENTAL NATURE OF THE FRUIT:

It costs no Stamina.

Takes up no Effect slots.

Does not have to be purchased through the Builder.

If the character is made of fire, their attacks naturally possess the characteristics of fire. There is no need to buy narrative permission to produce it separately.

INTANGIBILITY

Attacks without Haki or Seastone can pass through the elemental body.

Depending on the nature of the attack and the situation, they may miss completely or deal half damage.

The GM determines which of the two consequences is appropriate.

Intangibility belongs to the initial Logia Trait. You do not need to reach an advanced Grade to gain it.

9.8.2 · SIGNATURE: THE ELEMENT SPREADS

CLEAN HIT · MARGIN +4

When you score a Clean Hit using the Fruit, the element spreads over an entire zone.

The manifestation of the effect must respect the nature of the element and the situation.

The Signature does not automatically assign numerical dimensions or costs that the ability does not specify.

9.8.3 · D4–D6: THE GIFT

SENSE THE ELEMENT

PASSIVE

You perceive whatever comes into contact with your element.

You can recognise the presence, position and movement of anyone within it even without seeing them directly.

Perception works through:

- your elemental body;
- the element you are producing;
- the element you are directly controlling.

An external source of your element does not automatically become part of your perception.

To establish a connection to an external source, you must at least:

be able to see it.

Once you have brought it under your control, you can perceive whatever comes into contact with it as long as the connection remains valid.

Sense the Element does not allow you to perceive automatically through every source of your element in the scene or the world.

ELEMENTAL BODY

PASSIVE

Add +1 die to escape, mobility and breaking-free checks when you exploit the nature of your elemental body.

The bonus applies only when the nature of the element actually provides an advantage. Elemental Body does not grant immunity to Grapples or immobilisation: that ability belongs to Dispersed Body.

ALWAYS IN FORM

PASSIVE

Your intangibility becomes instinctive.

It continues to work even when you are caught by surprise, asleep or unconscious.

The Fruit's weaknesses still apply.

The Talent modifies when intangibility works, not its power, and does not change the normal interactions with Haki, Seastone and the sea.

FEED ON THE ELEMENT

PASSIVE

When you are near a living source of your element, you recover 1d6 Stamina at the start of each scene.

The source must be sufficiently significant and consistent with the Fruit.

A fire user could feed on a blaze or a furnace. An ice user could draw on a glacier.

A mere trace of your element does not necessarily count as a living source.

Recovery occurs only once, at the start of the scene. A source created specifically by the user is not considered valid.

9.8.4 · D8–D10: CONTROL

DISPERSED BODY

PASSIVE

Your elemental body cannot be grabbed, restrained, tied up or immobilised using ordinary hands, ropes and chains.

You can also pass through any opening through which your element could pass.

For example, a smoke Logia could pass through the gaps in a door.

Haki and Seastone remain effective. This Talent does not remove the weaknesses of the Fruit.

It does not allow you to pass through a completely airtight wall: the possibility depends on the properties of the element.

ABSORB

PASSIVE

When you suffer an attack made of your own element, you take no damage.

Instead, you recover 1d6 Stamina.

The Talent requires the attack to actually use the element corresponding to your Fruit.

Mere affinity is not enough: a fire Logia absorbs fire, not automatically magma, explosions or lightning. The Fruit Sheet establishes what truly belongs to the element.

Absorb cannot be deliberately exploited through attacks by the character themselves or an ally made solely to generate Stamina.

OMNIPRESENT ELEMENT

PASSIVE

Your Fruit Techniques no longer have to originate from your body.

They can manifest through a source of your element in the scene.

The source must:

- actually consist of your element;
- be present in the scene;
- **be visible at the moment it is used.**

When you use a source this way, it becomes the point of origin of the Technique.

Where relevant, line of fire, cover, direction, Area and distances are determined from the source.

Omnipresent Element does not automatically grant permanent control of every source of your element in the scene.

The Talent does not remove the costs of the Technique or the requirements of its effects.

You cannot use a hidden source merely because the character knows it exists.

REFORM ELSEWHERE

REACTION · GRADE D10 · ONCE PER ENCOUNTER · 15 METRES

When an immediate, perceptible event occurs to which the character can reasonably react, they can use their Reaction to dissolve their body and reform at a point they can see within 15 metres.

Reform Elsewhere has no single universal trigger. It can be used in response, for example, to a declared attack, a sudden danger, a collapse, an explosion, hostile movement or another event that actually leaves room for a Reaction. The Game Master determines case by case whether the event is immediate and perceptible enough to allow its use.

The displacement does not require the main Action and does not provoke Reactions caused by displacement. The Talent does not consume the Bonus Action: it uses the Reaction.

The destination must be visible and actually reachable by the Logia manifestation; Reform Elsewhere does not automatically allow conditions or obstacles to be crossed that the nature of the element would not allow you to overcome.

9.8.5 · D12: MASTERY

ELEMENTAL DOMAIN

PASSIVE

The character gains advanced control over the element already present in the environment.

They can influence its properties and distribution to change the conditions of the scene.

Applications include manipulating terrain, creating or modifying cover, feeding or extinguishing elemental sources and using environmental resources.

The Talent expands control over the element, but does not automatically assign numerical damage, dimensions or durations.

When an application produces a mechanical combat effect, use the rules of the corresponding Technique or those agreed with the Game Master.

Purely narrative changes can be made through the Talent. Elemental Domain does not allow other matter to be turned into your element.

WHOEVER TOUCHES YOU

PASSIVE · DEFENCE

The nature of your element is dangerous even to those who manage to hit you.

When an enemy hits you in melee bare-handed or using another part of their body, they take:

1D6

DAMAGE FROM YOUR ELEMENT

The damage must be consistent with the nature of the Fruit: burns for fire, freezing for ice, and so on.

The Talent does not automatically apply to an enemy who hits you from a distance or through a weapon without making contact with your body.

The damage applies once for each attack that produces direct physical contact, regardless of the number of blows described.

If contact with that element cannot reasonably cause damage, the Talent may not be appropriate for that specific Logia: the GM does not invent a harmful property the element does not possess.

INEXHAUSTIBLE SOURCE

PREREQUISITE: FEED ON THE ELEMENT

PASSIVE

When you are inside or immediately beside a large source of your element, your Fruit Techniques cost no Stamina.

The benefit concerns Fruit Techniques and requires the source to actually be available.

A small or purely decorative source does not automatically meet the condition.

Example: a fire Logia fighting inside a large blaze could use their Fruit Techniques for free as long as they remain in the required condition.

A source deliberately created by the character does not automatically become valid. The benefit does not remove costs of Talents, Haki or other resources.

LOST FORM

ACTIVE TALENT · BONUS ACTION TO ACTIVATE

The character completely disperses their body into the element.

They can take the form of a cloud, a current, a spreading flame or another consistent manifestation.

The transformation lasts an entire scene.

WHILE IN THIS STATE:

They cannot wield or use objects.

They cannot make attacks.

They can move anywhere their element can reach.

They can pass through barriers that are not airtight.

They cannot be recognised by their normal appearance.

Returning to ordinary form requires a main Action.

Lost Form is a state of dispersion and mobility, not an offensive Technique. It does not allow you to attack while also retaining the benefits of complete dispersion.

Moving anywhere the element can reach describes possible paths, not unlimited movement: the character still respects their Movement. While in Lost Form, they cannot use offensive Techniques.

9.8.6 · D20: AWAKENING

AWAKENING · LOGIA

ULTIMATE

Requirements: Fruit Die d20, Ambition and permission from the Game Master.

Awakening represents the ultimate manifestation of the Logia's element.

During Awakening, the element invades and changes the surrounding environment.

Logia Awakening is built using the normal **Awakening Guideline**.

ELEMENTAL SATURATION

Every Logia Awakening necessarily possesses **Elemental Saturation**.

The element invades the Area defined on the Awakening Sheet and progressively changes the conditions of the environment.

The concrete manifestation depends on the nature of the element.

The Area has no universal size and is defined when the Awakening is built.

HOSTILE ENVIRONMENT

Elemental Saturation makes the environment dangerous for creatures present.

When the Awakening is designed, the **Conditions or environmental consequences appropriate to the nature of the element** are defined.

Where consistent, they may concern:

- visibility;
- movement;
- breathing;
- temperature;
- perception;
- other consequences inherent to the element.

The effects are established before use and cannot be freely changed at each activation.

When a Condition normally allows a Save, it continues to apply.

DEVELOPING AWAKENING

In addition to Elemental Saturation and Hostile Environment, Awakening is developed using the normal Families:

- **Origin**
- **Costs / Discounts**
- **Expansion**
- **Domain**
- **Defence**
- **Attack**
- **Control**

The concrete Benefits are defined beforehand through the Awakening Guideline.

Awakening normally lasts:

1 scene.

AT THE END:

- **Stamina falls to 0;**
- **the character cannot use the Fruit until their next Long Rest.**

Voluntarily ending Awakening early does not avoid the required price.

9.9 · ZOAN

ZOAN

TRANSFORMATION

Zoan allow the character to transform into an animal creature and combine the characteristics of the animal with those of their own body.

Unlike Paramecia and Logia, their strength is primarily physical: strength, resilience, mobility, senses and the natural characteristics of the animal.

Every Zoan has three fundamental forms.

HUMAN

The character's ordinary appearance.

HYBRID

Combines a human body and animal characteristics.

BEAST

Takes the complete form of the animal.

9.9.1 · TRAIT: THE THREE FORMS

FREE

The character can transform into their animal form and hybrid form.

THE FUNDAMENTAL TRANSFORMATION:

It costs no Stamina.

Takes up no Effect slots.

Does not require a Technique to be created.

A normal transformation uses the main Action; you can return to Human Form from Hybrid or Beast Form.

In hybrid or beast form, the body takes on the size and characteristics of the corresponding creature.

Specific additional abilities are determined by the Talents acquired.

The Three Forms Talent further governs free switching between forms during combat.

9.9.2 · SIGNATURE: THE OVERWHELMING BLOW

CLEAN HIT · MARGIN +4

When the character scores a Clean Hit while in hybrid form, they can choose one of the following benefits:

STUN

The target becomes Stunned.

ADDITIONAL DAMAGE

Add a Damage Die to the attack.

The character chooses one of the two effects, not both.

The Signature expressly requires hybrid form: it does not automatically apply to human or beast form.

9.9.3 · D4–D6: THE GIFT

HYBRID FORM

ACTIVE TALENT · BONUS ACTION

Take a form that combines the human and animal characteristics of the Fruit.

FOR THE ENTIRE SCENE YOU GAIN:

+1 die to physical rolls based on Strength and Athletics.

+1 Damage Die to melee attacks.

The damage benefit applies to melee attacks compatible with the form.

The Talent does not automatically modify all of the character's Attributes.

Hybrid Form can be taken even without this Talent: the Talent represents the ability to use it as a true combat configuration.

ANIMAL INSTINCT

PASSIVE

You exploit the instincts of the creature into which you can transform.

During exploration, add +1 die to appropriate Observation, Survival and pursuit checks.

You can also overcome prohibitive terrain that would stop an ordinary character when the characteristics of the animal justify it.

An animal capable of climbing, for example, can tackle surfaces that would require specific equipment for others.

The bonus applies only when the instincts of the creature actually provide an advantage. Animal Instinct does not replace Animal Senses.

THREE FORMS

FREE

1 TIME PER TURN

You can freely switch between human, hybrid and beast form once per turn, without consuming the main Action.

The change can occur even during a sequence of blows.

The Talent grants no new Actions and does not allow unlimited transformations in the same turn.

Changing form uses the Bonus Action and costs no Stamina.

CLAWS AND FANGS

PASSIVE

The natural offensive characteristics of the Zoan become true **Natural Weapons**.

They may include claws, fangs, horns, a beak, a tail, spikes, quills, pincers, stingers or other structures consistent with the creature.

When you acquire the Talent, record the Natural Weapons available in the appropriate forms.

For each Natural Weapon indicate:

- **Name**
- **Anatomical part**
- **Available form**
- **Weapon type**
- **Grade**
- **Attribute**
- **Reach**

The Grade of the Natural Weapon equals the:

Fruit Die.

Each Natural Weapon is associated with one of the normal weapon types:

BLADE

Claws, fangs and cutting structures.

BLUNT

Hooves, headbutts, heavy tails and impact structures.

POLEARM

Long horns, stingers and piercing structures.

RANGED

Quills or projectiles produced directly by the body.

THROWN

Anatomical parts that can be detached and thrown.

SPECIAL

Tongues, prehensile tails, tentacles or other unusual anatomy.

If the Natural Weapon works at range, its Reach must be recorded.

Natural Weapons take up no places in the Arsenal and can be used to make basic attacks even by characters who do not have the Fighter Role.

They do not require a Combat Style to make a basic attack and cannot normally be disarmed.

The Talent does not automatically grant Techniques or Talents belonging to Combat Styles.

The classification is chosen when the Natural Weapon is recorded and does not change from one attack to another. Melee Natural Weapons normally use the reach appropriate to the Form and Size of the Zoan.

9.9.4 · D8–D10: CONTROL

ANIMAL SENSES

PASSIVE

The characteristic senses of the creature reach an exceptional level.

When you acquire the Talent, the senses appropriate to your creature are identified.

They may include:

- smell;
- hearing;
- sight;
- echolocation;
- vibration perception;
- thermal perception;
- other natural sensory abilities.

Through these senses you can locate hidden creatures within:

20 metres

even without seeing them directly, provided the sense used can actually detect them.

You can also follow days-old tracks when your sense allows it.

The Talent does not automatically grant every possible sense.

Use only those consistent with the creature.

BEAST RUN

PASSIVE · BEAST FORM

Beast Form makes full use of its natural mode of locomotion.

When you acquire the Talent, assign the Zoan to a Movement Family.

FAMILY	EXAMPLES	INCREASE
Land sprinter	Felines, fast canines, equines, antelopes, ostriches, bipedal predators	**+4 m on the ground**
Heavy land animal	Bears, bovines, boars, rhinoceroses, elephants, large heavy dinosaurs	**+2 m on the ground**
Climber	Primates, goats, geckos, tree-dwelling animals	**+2 m normally; +4 m when climbing or moving appropriately**
Flier	Birds, bats, winged insects, pterosaurs	**+2 m on the ground; +4 m when flying**
Burrower	Moles, badgers, insects and burrowing creatures	**+2 m on the ground; +4 m when burrowing appropriately**
Serpentine	Snakes and large slithering creatures	**+3 m during compatible displacements**

In addition, you ignore natural Difficult Terrain when the creature's mode of locomotion is appropriate to the situation.

The chosen Family remains associated with the Fruit.

The weaknesses of Devil Fruits continue to apply normally in water.

The Family cannot be freely changed. There is no aquatic Movement Family: a Zoan based on an aquatic creature possesses its anatomy and characteristics, but immersion continues to produce the normal consequences for Devil Fruits.

SIZE

PASSIVE · BEAST FORM

The mass and dimensions of Beast Form become a concrete advantage during combat.

SIZE	INDICATIVE DIMENSIONS	REACH
Small / Medium	up to approximately 2.5 m	**1 m**
Large	approximately 2.5–5 m	**2 m**
Huge	approximately 5–8 m	**3 m**
Gigantic	approximately 8–12 m	**4 m**
Colossal	over 12 m	**5 m**

The dimensions shown are game references.

The actual Beast Form determines the appropriate Size.

When you move through the space occupied by a creature smaller than your Size, you can trample it and make it:

Off-Balance.

A Zoan of Large Size or above can also carry at least one normally sized character without reducing their Movement.

Size does not artificially increase the dimensions of Beast Form.

Melee attacks made through the body or Natural Weapons use the Reach specified by Size when it is greater than the weapon's normal reach.

The Talent does not allow you to trample creatures of the same or greater Size. A naturally Small or Medium Zoan does not gain additional Reach simply by choosing this Talent.

GROWING FEROCITY

PASSIVE

When your HP fall below half their maximum value, the instincts of the creature become more aggressive.

You gain +1 Damage Die to melee attacks until the end of the encounter.

The benefit activates when the HP condition is met.

It does not require a Bonus Action.

Being subsequently healed above half HP does not remove the benefit.

9.9.5 · D12: MASTERY

BEAST RESILIENCE

PASSIVE · HYBRID OR BEAST FORM

The transformed body develops exceptional resistance to wounds.

Once per round, when you take damage from an attack, you can reduce by:

1 Grade

all the Damage Dice of that attack.

Progression:

d20	→	**d12**
d12	→	**d10**
d10	→	**d8**
d8	→	**d6**
d6	→	**d4**

d4 is the minimum.

Beast Resilience does not use the Reaction.

The Talent does not remove Statuses, Displacements, conditions, other secondary effects of the attack or fixed damage not expressed through Damage Dice.

ANCIENT HERITAGE

PASSIVE

Requirement: Ancient Zoan.

The character reaches sufficient mastery to exploit an exceptional characteristic of their ancient creature.

The Zoan was already Ancient from the creation of the Fruit: the Talent does not change the category; it unlocks an advanced ability connected to the ancient nature of the creature.

This can be:

- An exceptional body structure.
- An unusual Natural Weapon.
- A unique physical configuration.
- An extraordinary biological ability.
- An exceptional size.
- Another characteristic of the species.

The potential characteristic is recorded on the Creature Sheet from the creation of the Fruit: the Talent represents the moment when the character learns to exploit it fully.

MYTHICAL HERITAGE

PASSIVE

Requirement: Mythical Zoan.

The character reaches sufficient mastery to manifest one of the supernatural abilities of their mythical creature.

The Zoan was already Mythical from the creation of the Fruit: the Talent does not change the category; it unlocks a supernatural ability not previously mastered.

This can be:

- An element.
- A supernatural phenomenon.
- A regenerative ability.
- A mystical manifestation.
- A property exclusive to the creature.

The ability must be consistent with the Heritage indicated on the Creature Sheet.

An ability unlocked through Ancient or Mythical Heritage can become a narrative Source for new Fruit Techniques, following the normal Builder rules: the Talent does not automatically grant Builder effects, but the ability that allows them to be represented.

SURVIVAL INSTINCT

1 TIME PER BATTLE

WHEN YOU WOULD FALL TO 0 HP

When an attack or another effect would bring you to 0 HP, animal instinct allows you to remain standing.

You remain conscious with 1 HP until the end of your next turn.

The HP gained is temporary and does not represent healing: at the end of your next turn you fall to 0 HP, unless in the meantime you have received genuine healing sufficient to keep you above 0.

INSTINCTIVE TRANSFORMATION

REACTION

ONCE PER SCENE

0 ST

When you are about to be directly affected by an attack, a hostile Technique or another dangerous effect, you can use your Reaction to transform immediately.

The transformation occurs before the effect is resolved.

You can use Instinctive Transformation even when you are:

- asleep;
- Stunned;
- unconscious.

The ability performs only the change of form.

It does not automatically activate other active Talents associated with the form taken.

TRANSFORMATION ECONOMY

- Normal transformation: main Action, 0 ST.
- Three Forms: Bonus Action, 0 ST, once per turn.
- Instinctive Transformation: Reaction, 0 ST, once per scene.

CALL OF THE BLOOD

PASSIVE · NARRATIVE

Animals of your own species, or species close enough to recognise you, consider you a pack leader.

They do not attack you first and normally allow you to cross their territory.

With time and patience, they may come to follow you.

The Talent does not automatically grant mind control over animals or turn them into subordinate combatants without further narrative conditions.

Animals do not automatically become servants, combatants, permanent companions or creatures willing to sacrifice themselves. Risky requests or requests contrary to their natural behaviour may require time, narrative conditions or appropriate checks.

9.9.6 · D20: AWAKENING

AWAKENING · ZOAN

ULTIMATE

Requirements: Fruit Die d20, Ambition and permission from the Game Master.

The character reaches:

Ultimate Form.

The body, instincts and fundamental characteristics of the Zoan reach a manifestation impossible through normal transformation.

Awakening lasts:

1 scene.

AWAKENED REGENERATION

At the start of each turn you recover:

1d10 HP.

You cannot exceed your maximum HP.

AWAKENED NATURAL WEAPONS

Attacks made directly through the transformed body or Natural Weapons gain:

+2 Damage Dice.

The benefit grants no additional attacks.

ABSOLUTE INSTINCT

While in Ultimate Form you cannot be:

Stunned or **Off-Balance.**

DOMINANT CHARACTERISTIC

Every Zoan Awakening also takes one fundamental characteristic of the creature to its extreme.

The Benefit is defined through the normal Awakening Guideline.

It may concern:

- **Movement**
- **Defence**
- **Size**
- **Senses**
- **Body control**
- **Ancient or Mythical Heritage**

There is no universal increase to Strength or Movement.

The Dominant Characteristic must reflect the specific nature of the creature and remains unchanged once defined.

THE PRICE OF AWAKENING

AT THE END OF THE SCENE:

- **Stamina falls to 0;**
- **the character cannot use Zoan transformations again until their next Long Rest.**

Voluntarily ending Awakening before the end of the scene does not avoid these consequences.

CHAPTER 10 ·

WEAPONS AND EQUIPMENT

A sword may be only a piece of iron. Or it may be a blade handed down through generations, forged by a master and capable of accompanying its owner to the end of the Grand Line.

In Grand Line Chronicles, weapons have a mechanical identity distinct from Techniques. The character learns to fight through their Style, develops moves through the Technique Builder and uses weapons as tools to execute them.

A weapon does not generate a Technique: it executes it.

Its Grade indicates the quality of the tool. Any special effect instead represents an additional property, distinct from Grade and subject to Game Master approval.

10.1 · THE STRUCTURE OF A WEAPON

Every weapon is defined through the Weapon Builder.

WEAPON SHEET

CHARACTERISTIC	FUNCTION
Name	Identifies the weapon.
Type	Determines the category and compatible Style.
Grade	Represents the quality of the weapon.
Attribute	Strength or Technique.
Reach	Determines the distance at which it can be used.
Special effect	An additional property, if any.
Conditions	Indicate when the effect can be applied.
Price	Any cost of the special effect.
GM approval	Confirms that the properties have been agreed at the table.

Ordinary weapons do not necessarily need a special effect.

A d8 katana without effects remains a perfectly usable d8 katana, provided the character meets the required conditions.

Grade and special effect are two independent characteristics: increasing Grade does not automatically generate a new effect.

10.2 · THE SIX WEAPON TYPES

The system distinguishes six categories.

BLADE

Katanas, swords, sabres and daggers.

SWORDSMAN

BLUNT

Maces, hammers, clubs and knuckle dusters.

CRUSHER

POLEARM

Spears, staves, halberds and tridents.

VARIABLE

RANGED

Pistols, rifles, bows and crossbows.

SNIPER

THROWN

Knives, javelins, throwing axes and shuriken.

SHARED ACCESS

SPECIAL

Whips, chains and unconventional tools.

TO BE CHECKED

Style assignment determines which weapons can be used to execute the corresponding Techniques and, where allowed, exploit their special effects.

Special-type weapons belong to the original structure of the arsenal, but the Special Style is not currently selectable on the V2 sheet. Their presence in the catalogue therefore does not imply automatic compatibility with the available Styles.

10.3 · POLEARMS

Polearms have a special feature: they must be classified according to how they are used.

The Builder provides two modes.

EDGED

SWORDSMAN

Uses a point or blade as its main element.

BLUNT

CRUSHER

Uses the shaft as an impact weapon.

The mode must be chosen when the weapon is built.

Example: a spear classified as Edged requires the Swordsman Style to exploit its special effect. An iron-shod staff classified as Blunt instead requires Crusher.

The mode cannot be left undefined when weapon compatibility must be established.

10.4 · WEAPON GRADE

Grade represents the quality of the weapon and is expressed through a die.

GRADE	QUALITY
d4	Basic
d6	Competent
d8	Expert
d10	Master
d12	Legend
d20	Mythic

Weapon Grade is distinct from Technique Grade and the Racial Die.

A character could have a d10 katana and a d8 Technique: the two values do not automatically become identical.

10.4.1 · ATTRIBUTE REQUIREMENT

To use a weapon, the die of its reference Attribute must equal or exceed the Weapon Grade.

Attribute Die ≥ Weapon Grade

A character with d8 Technique can use a weapon associated with d8 Technique, but does not meet the requirement for a d10 weapon.

The rule is particularly relevant when a pirate obtains an extraordinary weapon before developing their abilities sufficiently to wield it effectively.

Striker exception: a Striker fights bare-handed and needs no Weapon Grade for their Techniques. They use their Attribute without being limited by the requirement of a wielded weapon.

The Builder records Attribute and Grade as separate fields. The requirement must be checked at the table: merely having the weapon on the sheet does not prove that the character automatically meets every condition.

10.5 · THE WEAPON ATTRIBUTE

Every weapon uses one of the two Attributes provided by the Builder.

ATTRIBUTE	APPLICATION
Strength	Weapons used primarily through power and physical control.
Technique	Weapons used primarily through precision and skill.

The Attribute is chosen during construction and agreed with the GM.

It is not assigned automatically by the name of the weapon.

Two weapons of the same Type can use different Attributes when their design and the way they are wielded justify it.

For example, a particularly heavy sword could be associated with Strength, while a blade designed for precise blows could use Technique.

The GM must approve the association, preventing the Attribute from being freely changed for each attack.

10.6 · WEAPONS AND COMBAT

A weapon can be used to make a basic attack or as a tool to execute a compatible Technique.

The two situations use different formulas.

10.6.1 · BASIC ATTACK

When a character makes a basic attack with a weapon, roll:

ATTACK ROLL

ATTRIBUTE + WEAPON GRADE

The result is compared with the target's Defence.

The Damage Die of the basic attack follows Weapon Grade, unless effects specify otherwise.

EXAMPLE

A pirate with d8 Strength uses a d8 mace.

THEIR ATTACK ROLL IS:

1d8 (Strength) + 1d8 (Weapon)

If they hit, they roll weapon damage, applying only any permitted modifiers.

10.6.2 · TECHNIQUE ATTACK

When the character uses a Technique, the attack roll follows this formula:

Attribute + Technique Die

The Damage Die is that of the Technique.

Weapon Grade does not replace the Technique Die.

A d12 sword does not automatically turn a d8 Technique into a d12 Technique.

The weapon allows the move to be executed and can contribute through a compatible special effect of its own, but does not grant a free increase in Grade.

10.7 · REACH

Reach indicates the distance at which a weapon can reach its target.

Melee weapons in the initial catalogue use the general description Melee.

Actual reach can vary according to the characteristics of the weapon, the character's Race and any specific abilities.

For ranged, thrown and special weapons, the V2 catalogue does not yet assign a universal value in metres.

The value must be recorded on the sheet when it is defined by the GM.

WEAPON TYPE	INITIAL INDICATION
Blade	Melee
Blunt	Melee
Polearm	Melee, with actual reach to be defined
Ranged	Reach to be recorded
Thrown	Reach to be recorded
Special	Reach to be recorded

It is not correct to automatically assign 20 metres to every pistol or 10 metres to every throwing knife. The value depends on the weapon actually designed.

When a Technique specifies its own reach, the rules of that Technique also apply.

10.8 · STYLE COMPATIBILITY

The system distinguishes three aspects: owning a weapon, being able to use it and being able to exploit its special effect.

They are not necessarily the same thing.

10.8.1 · STYLE DETERMINES THE ARSENAL

Weapons are assigned to Combat Styles.

STYLE	ASSOCIATED WEAPONS
Swordsman	Blade, Edged polearm
Crusher	Blunt, Blunt polearm
Sniper	Ranged, thrown
Striker	Bare hands for Style Techniques

Thrown weapons are a shared category for Arsenal places.

However, their compatibility with special effects and Style Techniques follows the association specified for Sniper.

EXAMPLE

A Crusher can have access to a thrown weapon in their Arsenal.

This does not turn them into a Sniper or allow them to execute Sniper Techniques.

To exploit a special effect that expressly requires the Sniper Style, they must possess that Style.

10.8.2 · INCOMPATIBLE WEAPONS

When the character does not possess the Style required by the weapon, they cannot use its special effect.

V2 management distinguishes this case from using the simple Weapon Grade.

Style and Arsenal limitations remain in force: a weapon recorded on the sheet does not automatically become equippable.

10.8.3 · CHARACTERS WITHOUT THE FIGHTER ROLE

In the V2 management system, Arsenal places depend on the Fighter Role and the Styles possessed.

A character without the Fighter Role does not have the corresponding weapon places.

They can possess items in their inventory and use the tools of their profession, but do not automatically gain access to Style Techniques or weapon special effects.

10.9 · ARSENAL PLACES

Each Combat Style normally grants one place for a compatible weapon.

A character who possesses two Styles can have one place for each.

Compatibility is checked across all the weapons present: it is not enough for each weapon to be generically compatible; there must be enough places for all of them.

CONFIGURATION	AVAILABLE PLACES
One Style	1 weapon
Two Styles	1 weapon per Style
Swordsman with More Swords · Basic	Ability to carry 2 blades
Swordsman with two Styles in total	Places determined by the combination of Styles and Talents

10.9.1 · MORE SWORDS

The More Swords · Basic Talent allows the Swordsman a second place for a blade.

It does not grant a generic place for a weapon of any Type.

The second place is therefore reserved for blades.

EXAMPLE

A Swordsman possesses More Swords · Basic.

They can record two katanas in their dedicated places.

They cannot freely replace the second katana with a rifle, because the Talent does not grant compatibility with the Sniper Style.

10.10 · WEAPON SPECIAL EFFECTS

A weapon can have at most one special effect.

The effect is defined separately from Grade and agreed with the Game Master.

A d4 weapon can possess an unusual effect if the story and GM allow it. Conversely, a d20 weapon does not necessarily receive an effect merely because it is Mythic.

The Builder divides effects into five categories.

DISCOUNT

Reduces a cost or the number of slots required by a specific effect.

UNLOCK

Allows a specific requirement to be bypassed within the limits established by the effect.

PASSIVE

Grants a benefit when the weapon conditions are met.

REACTION

Allows intervention in response to a specific event.

CURSE

Offers power accompanied by a price or a negative consequence.

Effects must be worded precisely.

A description such as “the sword is extremely powerful” is not a sufficient rule.

You must specify what benefit it provides, when it applies, how much it costs and what limits it has.

10.10.1 · DISCOUNT

A DISCOUNT EFFECT MUST INDICATE EXACTLY:

The cost being reduced.

The effect or ability concerned.

The amount of the discount.

The conditions for applying it.

Any remaining minimum cost.

A Discount does not automatically reduce all of the character’s costs.

Example of a custom effect: a particular katana could reduce the cost of a specific Technique by 1 ST, to a minimum of 1 ST, once per encounter.

These values are a design example, not a benefit assigned to all katanas.

10.10.2 · UNLOCK

An Unlock effect allows an exception to a defined requirement.

It can make a Builder effect accessible early, when the GM approves.

The description must indicate which requirement is modified.

Unlocking an effect does not automatically remove all other requirements.

If a weapon allows an effect normally available at d10 to be used at d8, the character must still respect the other constraints of the Technique, such as Style compatibility, Source and slot availability, unless exceptions are expressly specified.

10.10.3 · PASSIVE

A Passive produces a benefit without requiring voluntary activation each time.

The benefit is available only when the weapon effect can actually be used.

For example, a weapon could grant a specific bonus while wielded or when a condition is met.

The effect does not automatically transfer to all the character’s other weapons or Techniques.

10.10.4 · REACTION

A REACTION EFFECT MUST SPECIFY:

When: the event that allows it to be used.

Result: what happens when it is activated.

Frequency: how many times it can be used.

Price: any cost required.

If the ability requires a Reaction, the character must have their Reaction available.

A Reaction effect does not automatically grant an additional Reaction.

10.10.5 · CURSE

A Curse associates power with a price.

The description must specify both.

The price can involve Stamina, HP, charges or a particular consequence defined by the GM.

There is no universal penalty assigned to all cursed weapons.

A cursed blade could require a sacrifice to activate, while another could impose particular conditions on its user.

The two weapons must be built separately.

10.11 · EFFECT FREQUENCY AND PRICE

Every special effect must state its frequency.

FREQUENCY	MEANING
Always	The benefit applies whenever the conditions are met.
1×/turn	Can be used once per turn.
1×/combat	Can be used once per combat.
1×/scene	Can be used once per scene.
Charge-based	Consumes a limited resource.

The effect can also specify one of the following prices.

PRICE	HOW IT WORKS
None	Requires no additional resources.
Stamina	Consumes the indicated amount of ST.
HP	Requires the sacrifice of the specified HP.
One charge	Consumes one weapon charge.
Other	Uses an agreed resource or condition.

Simply choosing the category does not determine the numerical value of the cost.

If an effect has a price in HP or Stamina, the amount must be recorded.

10.12 · ORDINARY AND SPECIAL WEAPONS

The Builder distinguishes weapons without a special effect from those with one.

ORDINARY WEAPON

STANDARD KATANA

GRADE D4

TYPE: BLADE

REACH: MELEE

EFFECT: NONE

CUSTOM WEAPON

TWILIGHT KATANA

GRADE D8

TYPE: BLADE

REACH: MELEE

Effect: to be agreed with the GM.

The second weapon does not automatically gain an effect because it has a higher Grade.

The player must design it and the Game Master must approve it (unless the Game Master creates the weapons and their corresponding effects for their own session).

Approval is noted on the weapon sheet. The tick records the agreement; it is not automatic validation of the rules.

10.13 · AMMUNITION AND RELOADING

Ranged weapons use compatible ammunition: bullets, arrows, bolts or other types specified by their construction.

Ammunition and reloading are two distinct elements. Having ammunition does not mean the weapon is already loaded; reloading, conversely, does not create new ammunition.

The weapon sheet must indicate its capacity and any reload conditions. The V2 catalogue does not establish a universal capacity for all weapons: these details must be defined for the specific model, without arbitrarily assigning the same number of shots to pistols, rifles and bows.

ORDINARY RELOADING

Reloading a weapon normally requires an Action when its sheet specifies a reload.

Weapons that can fire several shots before being reloaded follow their own capacity.

SNIPER TALENT · RAPID RELOAD

RAPID RELOAD

d8

Once per turn, the Sniper can reload a weapon without consuming their main Action.

In the V2 system, activating the Talent uses the only Bonus Action of the turn.

The Sniper can therefore reload and attack in the same turn, but cannot also use that Bonus Action to activate Haki or another active Talent.

SPECIAL AMMUNITION

Special ammunition consists of consumables with their own properties, such as modified bullets, bolts or other preparations.

To use one, the character must possess it and the weapon must be compatible. Its effect applies according to the ammunition description.

Special ammunition can be built through the normal Workshop rules when the character has the corresponding blueprint, necessary materials and appropriate Skill.

CHAPTER 11 ·

THE WORKSHOP AND CRAFTING

A pirate ship does not survive through its fighters alone. When a cannon shot destroys the rudder, a weapon jams or a new contraption could turn the tide of a boarding action, it takes capable hands to turn materials and blueprints into something concrete.

The Workshop allows objects to be built, modified and repaired. Crafting is the system used to resolve these activities through Skills, materials, time and Checks.

You do not need to belong to a particular Role to attempt a construction. What matters is having the expertise required by the blueprint and the conditions needed to realise it.

This chapter presents the general construction rules. Particular objects and special blueprints can be introduced by the Game Master during the campaign.

11.1 · WHAT IS A BLUEPRINT?

A blueprint describes an object the character intends to build or work they want to carry out on something that already exists.

It may concern a simple tool, special ammunition, a mechanical weapon or a device intended for the ship.

Before starting, the characteristics of the blueprint must be defined.

BLUEPRINT SHEET

ELEMENT	DESCRIPTION
Name	Identifies the object to build.
Function	Describes what it must actually do.
Skill	Determines the expertise required.
Threshold	Establishes the difficulty of construction.
Tempo	Indicates the working hours required.
Materials	Lists required ingredients and components.
Effect	Describes any mechanical benefit.
Limitations	Specifies uses, maintenance and other conditions.

A blueprint can belong to the equipment normally available or be a special blueprint introduced by the Game Master.

In both cases, Function, Skill, Threshold, Time, Materials, any Effect and Limitations must be established before the construction Check.

A high result does not allow abilities not included in the blueprint to be added to the object.

11.2 · WHO CAN BUILD?

Anyone with the appropriate Skill can attempt a blueprint within their expertise.

The Skill depends on the object and the activity.

SKILL	APPLICATIONS
Crafting	Tools, manual work and ordinary objects.
Mechanics	Contraptions, engines, mechanical weapons and devices.
Carpentry	Wooden structures, hull and ship components.
Medicine	Medical tools and preparations, where appropriate.
Navigation	Nautical charts and instruments requiring knowledge of courses.

The blueprint sheet determines the exact Check. When designing and assembling a contraption, a common formula is:

CONSTRUCTION CHECK

CUNNING + MECHANICS

Or the Skill specified by the blueprint.

Knowing a Skill does not automatically grant the Talents of Roles that use that same expertise.

A pirate with d8 Mechanics can, for example, build or repair a device compatible with their expertise. However, they do not possess Rapid Response or Hands in Oil unless they have acquired those Talents.

THE ROLE OF THE ENGINEER

The Engineer has two specialisations.

SPECIALISATION	MAIN EXPERTISE
Carpenter · Carpentry	Hull, structures and naval repairs.
Mechanic · Mechanics	Machines, cannons, engines and devices.

These specialisations grant their respective Talents, but do not determine who can use Crafting. A character with the appropriate Skill can attempt a blueprint within their expertise, respecting its Threshold, materials, time and requirements.

11.3 · THE STAGES OF CRAFTING

Construction follows a common procedure.

- Define the blueprint
  The player describes what they want to achieve. The GM establishes whether the object can be made and what abilities it can possess.
- Determine requirements
  Identify Skill, Threshold, materials, tools and working hours.
- Obtain materials
  The components must be available. Some can be purchased; others require exploration or salvage.
- Carry out the work
  The character devotes the established hours to the blueprint, using the required tools and conditions.
- Make the Check
  The result determines whether the blueprint succeeds and the quality achieved.
- Record the object
  The completed object is noted in the inventory or appropriate sheet, together with its effects and limitations.

The blueprint must be defined before the roll. You cannot wait for a particularly high result to declare that the object has abilities never agreed upon.

11.4 · ESTABLISHING THE THRESHOLD

Every blueprint requires a Threshold.

The GM determines it by considering the complexity of the object, the precision needed, working conditions and required knowledge.

Use the general scale for Checks.

THRESHOLD	DIFFICULTY
4	Trivial
8	Normal
12	Expert
16	Vice-Admiral
20	Admiral
25+	Legend

Object sheets can state specific Thresholds that do not exactly match these reference values.

The Threshold stated by the blueprint takes precedence over generic difficulty.

An object requiring Threshold 11 keeps Threshold 11: it must not automatically be rounded to 12.

UNFAVOURABLE CONDITIONS

Working without appropriate tools, on a ship in a storm or with components of insufficient quality can make the Check harder.

The GM applies appropriate changes according to the normal rules for Checks.

There is no universal penalty for every missing tool. Some jobs may simply be impossible without the necessary equipment.

11.5 · CONSTRUCTION TIME

Time is expressed in working hours.

Every blueprint indicates how much time it requires under ordinary conditions.

The character can split the work across several days, tracking the hours completed.

If a blueprint requires 20 hours and the character completes 8, 12 working hours remain.

Hours spent working do not automatically count as hours of rest.

WORKING DURING A VOYAGE

The onboard Workshop allows the crew to use voyages to build and repair objects, provided they have the necessary tools and materials.

The GM can interrupt the work when conditions do not allow it.

A workbench may be usable during calm sailing. It could instead become unusable while the ship faces a storm or takes part in a battle.

SEVERAL CHARACTERS ON THE SAME BLUEPRINT

Several characters can collaborate when the work allows it.

The GM establishes how to divide the activities.

Having two workers does not automatically halve every construction time. A process that requires waiting for metal to cool, for example, does not become instant by increasing the number of people.

Specific Talents can instead explicitly modify the hours required.

11.6 · RESOLVING THE CHECK

At the end of the required work, the character makes the Check specified by the blueprint.

Margin = result − Threshold

The result determines whether construction succeeds.

A blueprint completed with a high margin can produce an object of superior quality.

In particular, the system distinguishes a Masterpiece, which allows a workmanship advantage to be chosen.

MARGIN	OUTCOME
Negative	The Check fails.
0	Barely succeeds, with any complications established by the GM.
+1 / +3	Successful.
+4 or higher	Masterpiece.

The specific consequence of failure depends on the blueprint. The current rules do not specify that every failure automatically destroys all materials.

The GM determines whether the character must correct the work, obtain new components or restart a stage of construction.

THE MASTERPIECE

A Masterpiece allows one advantage to be chosen from those specified for the work.

ADVANTAGE	RESULT
Tempo	The hours required are halved.
Materials	Material consumption is halved.
Finishing	The object receives a superior finish appropriate to the blueprint.

The finish must be defined with the GM.

It does not automatically grant a new Damage Die, an Effect slot or an ability not specified by the blueprint.

A Masterpiece improves workmanship quality; it does not introduce new functions or effects into the object.

If you choose the Time advantage after the Check, subtract half the specified hours from the total and make them available again for other activities. For example, a 16-hour blueprint consumes 8 and leaves the other 8 free. The benefit also applies to hours already counted: crafting time is managed as an available resource, without requiring a detailed chronology.

11.7 · MATERIALS

A blueprint requires the materials indicated on its sheet.

The character must obtain them before completing construction.

Materials can be purchased, gathered, extracted from existing objects or obtained through adventure.

MATERIAL AVAILABILITY

SOURCE	EXAMPLE SITUATION
Purchase	Buying iron in a port.
Gathering	Searching for timber on an island.
Salvage	Dismantling abandoned machinery.
Reward	Obtaining a component from an artisan.
Narrative research	Discovering where a unique material can be found.

Not all materials can be purchased.

Seastone, certain abyssal ingredients and other extremely rare components may require a dedicated mission.

Narrative research represents the time needed to discover information, find a place or locate a supplier. It is not a physical material to add to the inventory.

SALVAGING COMPONENTS

Dismantling an object or exploring a wreck can allow usable parts to be salvaged.

The GM establishes the amount and condition of the materials available.

Talents that improve salvage, such as the Carpenter's Lumberjack and the Mechanic's Dismantler, apply their benefits to the corresponding Checks.

Dismantling an object does not automatically return 100% of the materials used to build it.

11.8 · THE MERCHANT AND PRICES

Material prices are expressed in Berry.

The system's economy distinguishes five tiers, useful for establishing how accessible a component is.

TIER	INDICATIVE PRICE	AVAILABILITY
Common	Up to 1,000 ฿	Villages and ordinary settlements
Standard	1,001–5,000 ฿	Ports
Good	5,001–15,000 ฿	Trading ports
Fine	15,001–50,000 ฿	Large ports and orders
Rare	Over 50,000 ฿	Special suppliers or the black market

These tiers are commercial reference points, not the automatic price of any constructed object.

Material sheets state the specific cost per unit or batch.

NEGOTIATIONS AND MARKET CONDITIONS

Good negotiation based on Communication can obtain a 10–20% discount when the merchant is willing to negotiate.

On an isolated island, during a naval blockade or in wartime, the price can double.

A pirate with a high bounty may also face a 25% surcharge or encounter merchants who refuse to serve them.

These conditions do not automatically apply to every purchase: they depend on the location and situation.

The digital Merchant catalogue contains the prices of individual ingredients. The manual uses only the general rules of trade.

11.9 · THE FOUR FAMILIES OF CRAFTABLE OBJECTS

The Workshop includes numerous types of blueprints. Four families are particularly relevant to combat and exploration.

FAMILY	FUNCTION
Ammunition	Consumables intended for weapons and combat.
Field gadgets	Equipment for exploration, mobility and utility.
Mechanical weapons	Weapons that incorporate devices or mechanisms.
Experimental modules	Devices that can be installed according to the Module rules.

The families identify the type of blueprint. They do not automatically grant bonuses.

A grappling hook, for example, allows the physical functions specified by its blueprint to be performed. It does not provide a bonus to Checks merely because it belongs to the Gadget family.

Likewise, a multi-barrelled pistol must specify capacity, conditions and operation on its sheet.

11.10 · CONSUMABLE OBJECTS

A consumable object is used a limited number of times.

Its sheet must state the conditions that determine when it is depleted.

A bomb is normally consumed when used. A kit may instead allow several uses before requiring replenishment.

The available quantity must be recorded in the inventory.

SPECIAL AMMUNITION

Special ammunition follows the rules of Chapter 10.

The Workshop allows it to be built, while the weapon determines whether it can be used.

Each special ammunition type has its own blueprint, establishing Skill, Threshold, Time, Materials, quantity produced and any Effect.

Particular effects, damage modifications or Statuses are not freely obtained during construction: they must already be specified by the ammunition blueprint.

11.11 · MODIFYING AN OBJECT

A character can work on something they already possess.

The work may consist of a repair, replacing a component or a modification specified by a particular blueprint.

The GM treats the modification as a normal Crafting blueprint, establishing Skill, Threshold, Time, Materials and result.

A modification does not automatically increase Weapon Grade or freely add Special Effects.

Weapon Grade represents its quality and continues to follow the normal rules of Chapter 10.

If a modification is to grant a new mechanical benefit, that benefit must be explicitly specified by the blueprint used.

11.12 · REPAIRING OBJECTS

Repairing means restoring a damaged object to a usable state.

Repair requires an appropriate Skill, materials and time.

Machinery is normally handled through Mechanics. A naval structure requires Carpentry.

The simple ability to build something does not remove the requirements of the work.

MALFUNCTION AND DESTRUCTION

Machinery can be in two different conditions.

Malfunctioning. The device is still structurally intact, but part of its operation is blocked, jammed or out of order. A malfunction can be removed through a normal repair or an ability that expressly permits immediate intervention.
Destroyed. The device has suffered serious structural damage, lost essential components or is no longer usable in its current form. Rebuilding it normally requires time, materials and the Workshop rules.
An ability that allows a Malfunction to be removed does not automatically allow a Destroyed device to be rebuilt.

A machinery sheet or specific ability may establish different conditions.

REPAIRS OUTSIDE COMBAT

The GM establishes the Threshold and hours required according to the damage.

A lightly damaged object may require brief work. A destroyed one may instead need complete reconstruction and new materials.

There is no universal percentage of hours or materials applicable to every repair.

REPAIRS DURING COMBAT

A normal Crafting activity does not automatically become executable in an Action.

Immediate repairs require abilities that expressly allow them.

EXAMPLES OF REPAIR TALENTS

Emergency Repair · Carpenter

During a naval battle, you use the Action to repair the hull. A successful Check immediately restores SP to the ship.

Rapid Response · Mechanic

Allows a contraption, cannon or malfunctioning machine to be quickly restored to operation according to the conditions of the Talent.

Hands in Oil · Mechanic

With a Workshop available, you halve repair times. Your tools do not wear out.

When a Talent specifies that the work requires an Action, the V2 Bonus Action rule does not automatically change how it works.

11.13 · THE QUALITY OF ENGINEERS' WORK

Engineers possess abilities that directly modify certain jobs linked to their specialisation.

These benefits are not universal Workshop rules: they belong to characters who have acquired the corresponding abilities.

CARPENTER · A REPAIR THAT HOLDS

When the Carpenter achieves a +4 margin on a Carpentry Check to repair the ship, the repair restores twice the specified SP.

The benefit concerns hull repair, not any object built by the Carpenter.

MECHANIC · RUNNING LIKE A DREAM

When the Mechanic achieves a +4 margin on a Mechanics Check while operating a machine, that machine acts twice in the turn.

The Signature concerns machinery operation; it does not automatically double the quality of every constructed object.

11.14 · SPECIAL BLUEPRINTS

Not all objects craftable on the Grand Line belong to ordinary equipment.

During the campaign, the Game Master can introduce special blueprints: unusual weapons, ammunition, tools, devices, ship improvements or other technologies that characters can build.

A special blueprint uses the same Blueprint Sheet as any other construction:

Name · Function · Skill · Threshold · Time · Materials · Effect · Limitations

The blueprint establishes in advance what the object can do.

Having the blueprint does not mean automatically having the object. To realise it, you must meet its requirements, obtain materials, devote the necessary time and make the specified Check.

A character can attempt construction if they have the required Skill. They do not need to belong to a specific Role unless the blueprint itself states a particular requirement.

Special Effects and other object abilities are established by the blueprint. They cannot be freely added following a particularly high roll.

The GM can use special blueprints as campaign rewards, discoveries or opportunities and may require rare components or particular conditions when the technology justifies it.

Once the blueprint is obtained, construction normally follows all the Workshop rules.

11.15 · MODULE CONSTRUCTION AND INSTALLATION

Modules use the normal Workshop rules, supplemented by the specific rules in the Cyborg Manual.

Technology Tier determines the minimum Mechanics expertise, Threshold and base time required for construction.

A completed Module can exist without being installed. In that case, it is stored as a normal object until the Cyborg has a free slot and sufficient Mechanical Body.

Installing a Module requires:

- a free slot;
- Mechanical Body at least equal to the Module Tier;
- the completed device;
- appropriate tools.

TIER	BASE INSTALLATION TIME
d6	30 minutes
d8	1 hour
d10	2 hours
d12	4 hours
d20	8 hours

Replacing a Module uses the time for the new installation and includes removing the previous one.

Upgrading a Module to a higher Tier constitutes a new blueprint.

11.16 · COMPLETE CRAFTING EXAMPLE

An Engineer wants to build a handmade Log Pose for the crew.

The blueprint sheet specifies Cunning + Mechanics, Threshold 11, 20 working hours and specific materials: refined magnetic iron, a sensitive needle, blown glass and leather.

BLUEPRINT · HANDMADE LOG POSE

- Threshold 11
- 20 hours
- Cunning + Mechanics
- Preparation

The character obtains all materials and has access to a suitable Workshop.

They complete the specified working hours.

Check

The dice result is 15.

15 − 11 = +4

The blueprint achieves a Masterpiece result.

Benefit

The player chooses the time advantage: of the 20 hours counted, the blueprint consumes only 10. The other 10 become available again and can be devoted to another blueprint or activity. It is a subtraction from the available working time: there is no need to reconstruct a more precise chronology.

The Log Pose is completed with the properties specified on its sheet.

Subsequent calibration still requires the time indicated by the blueprint: 2d6 days.

Construction quality does not automatically cancel the operating requirements of the object.

Likewise, achieving a Masterpiece does not turn the Log Pose into an Eternal Pose or give it a new permanent destination.

The blueprint produces what was agreed, with the workmanship benefit actually gained.

CHAPTER 12 ·

MECHANICAL BODY AND MODULES

A steel arm can conceal a cannon. A mechanical leg can contain a thruster. Behind a simple metal plate, there could be a shield capable of saving a companion from a cannon shot.

On the Grand Line, technology is not merely a collection of tools: it can become part of a pirate's body.

In Grand Line Chronicles, Modules are installable devices that provide physical functions and, where specified, a special effect. Their operation is governed by slots, technological requirements, activation and any energy resources.

A Module is not a Technique and is not necessarily a weapon.

Its purpose is to add a concrete ability to the character, usable independently or through compatible Techniques.

This chapter summarises the fundamental rules needed to use Modules during play. The complete Technology Tier tables, Module design, Special Effects, Energy, construction, installation and repair are explored in depth in the Cyborg Manual.

12.1 · WHAT IS A MODULE?

A Module is a mechanical device installed on the character's body.

It can replace an anatomical part, be integrated into a limb or constitute an additional apparatus.

Every Module has a physical function describing what the device is able to do.

It may also have a special effect, provided it is designed and approved by the Game Master.

ANATOMY OF A MODULE

FIELD	CONTENT
Name	Device identity
Technology Tier	d6, d8, d10, d12 o d20
Category	Offensive, Defensive, Mobility, Control or Utility
Structure	Functional or Weapon Module
Weapon Grade	Only for a Weapon Module
Physical function	What the device is built to do
Inactive function	What remains usable when Inactive
Active function	What it can do while operational
Special Effect	Optional; at most one
Energy	Resource type, where specified
Capacity / Consumption / Recharge	Resource management
Compatible Techniques	Any limits as an executor
Limits	Specific blueprint conditions
Integrity	Intact or Damaged
Installation	Installed or Not Installed
Activation	Active or Inactive

Physical function and special effect are distinct.

An extendable arm can stretch and grab objects because that is its function.

If the device must also reduce the cost of a Technique with Attraction, that discount must be recorded as a special effect.

Simply possessing the arm does not automatically grant both benefits.

12.2 · WHO CAN USE MODULES?

The system provides two sources of access to Modules: the Cyborg Race and, where available, access through specific abilities.

12.2.1 · CYBORG RACE

The Cyborg possesses the Mechanical Body Racial Technique.

This Racial Technique allows devices to be installed in their body, progressively increasing the number of available slots.

The ability depends on the Cyborg's Racial Die.

The character can choose Modules compatible with their technological level, respecting blueprint requirements.

12.3 · MECHANICAL BODY SLOTS

Slots represent the body's capacity to house devices.

Each installed Module takes up one slot.

The maximum number depends on Mechanical Body Grade.

RACIAL DIE	AVAILABLE SLOTS
d6	1
d8	2
d10	3
d12	4
d20	5

Slots are unlocked through Racial Die progression.

A Cyborg with d8 Mechanical Body therefore has two slots. When they reach d10, they increase to three.

12.3.1 · INITIAL MODULES

CYBORG CREATION

2 MODULES

At creation, the Cyborg receives two free Modules, with no initial purchase or construction costs.

The two Modules are agreed with the GM. Their installation must respect technological requirements and the slots actually available.

With d6 Mechanical Body, the Cyborg has only one slot: they can install one of the two initial Modules. When they reach d8, there are two slots and they can also install the second free Module. Possessing a Module does not mean it is already installed.

Subsequent installations normally follow the Workshop rules.

12.4 · TECHNOLOGY TIER

Every Module belongs to a Technology Tier.

Tier indicates the minimum Mechanical Body Grade needed to install it and establishes the maximum limit of its technological performance.

TIER	MECHANICAL BODY REQUIRED
d6	d6
d8	d8
d10	d10
d12	d12
d20	d20

Technology Tier and Weapon Grade are distinct values.

A Weapon Module can have a Weapon Grade equal to or below its Technology Tier, never above it.

Example: Module d10 · Weapon d8 is valid. Module d8 · Weapon d10 is not.

12.5 · THE FIVE MODULE FUNCTIONS

During construction, the player assigns the Module the Category or Categories that describe its Function.

OFFENSIVE

Devices intended to attack.

DEFENSIVE

Barriers, shields and mechanical protections.

CONTROL

Tools that grab, restrain or manipulate.

MOBILITY

Thrusters, cables and displacement systems.

UTILITY

Tools and practical functions that are not necessarily combat-related.

A Module can have more than one Category.

An extendable arm, for example, could belong to both Control and Mobility.

Categories classify the function of the device: they do not grant automatic bonuses.

An Offensive Module does not deal damage merely because it is classified as Offensive. To attack, it must have a suitable structure and respect the weapon or Technique rules.

12.6 · FUNCTIONAL MODULES AND WEAPON MODULES

Every Module must be classified as functional or usable as a weapon.

12.6.1 · FUNCTIONAL MODULES

A functional Module performs a task without possessing a Weapon Grade.

It may be a pincer, a tool compartment or a device that lights the environment.

FUNCTIONAL MODULE

MECHANICAL PINCER

Function: grab and manipulate objects.

Weapon Grade: none.

Special effect: optional.

Requirement: as indicated by the blueprint.

Its function can be used when the device is intact and the situation allows it.

The pincer can grab something because it was built to do so. However, it does not automatically grant a bonus to grapples or the Attraction effect.

A further mechanical benefit requires an ability that specifies it.

12.6.2 · WEAPON MODULES

A Weapon Module is a device usable to make attacks.

It possesses a Grade and follows the general weapon rules.

GRADE	QUALITY
d4	Basic
d6	Competent
d8	Expert
d10	Master
d12	Legend
d20	Mythic

The Grade of the Weapon Module is not automatically determined by its technological requirement.

Example: an integrated cannon could require d10 Mechanical Body but have Grade d8.

When used for a basic attack, it follows the weapon attack rules.

When executing a linked Technique, it uses the Technique Die; it does not automatically replace that die with its own Grade.

12.7 · ACTIVATING MODULES

A Cyborg can have several installed Modules, but normally keeps only one Active Module at a time.

The Active Module can use its active Function, Special Effect and linked Techniques.

The other installed Modules remain Inactive and retain only the inactive Functions stated on their sheets.

INITIAL MODULE

Outside combat, the Cyborg freely chooses which Module to keep Active.

At the start of an encounter, they keep the one already Active. If none was declared, they choose one without spending Actions.

CHANGING MODULE

Once during their turn, the Cyborg can change the Active Module for free.

The change consumes no Action, Bonus Action, Movement or Reaction.

The new Module becomes Active immediately and the previous one becomes Inactive.

A second free change cannot be made in the same turn.

OUTSIDE YOUR TURN

Normally, a Module cannot be changed outside your turn. A specific ability may allow it through a Reaction.

12.8 · THE PHYSICAL FUNCTIONS OF INACTIVE MODULES

An Inactive Module retains only the inactive Function recorded on its sheet.

The inactive Function includes physical properties that do not require the system to be operational: for example, a compartment that continues to hold objects or an artificial limb that retains normal mobility.

Propulsion, advanced sensors, defensive benefits, Special Effects and linked Techniques do not automatically remain available.

If the sheet states no inactive Function, the Inactive Module grants no mechanical benefits.

12.9 · SPECIAL EFFECTS

A Module can possess at most one Special Effect. The Effect is optional and grants only one main mechanical benefit.

The available categories are:

Discount · Unlock · Passive · Reaction · Curse

Technology Tier determines the maximum intensity of the Effect according to the Cyborg Manual tables.

A Special Effect cannot conceal several independent benefits and does not automatically grant additional Actions, additional Reactions, Talents, Haki, Devil Fruits, Ultimates, Prestige or infinite resources.

Unless explicit exceptions apply, the Effect requires the Module to be Installed, Intact and Active.

12.10 · ENERGY AND CHARGES

Not all Modules require a separate resource.

Every sheet indicates Energy: None or a consistent source, such as a battery, fuel, pressure, ammunition or other Charges.

When a Module uses Charges, its ordinary capacity depends on Tier:

TIER	MAXIMUM CHARGES
d6	3
d8	4
d10	5
d12	6
d20	8

A normal use consumes 1 Charge unless the blueprint states otherwise.

Charges and Stamina are different resources. If a Technique costs ST and the Module executing it consumes a Charge, both are paid.

Charges are not automatically recovered through Rest.

If the necessary resource is available, a normal full recharge requires 10 minutes outside combat.

12.11 · USING MODULES IN COMBAT

A Module can be used through its physical function, as a weapon or as a Technique executor.

These possibilities remain distinct.

USE	RULE
Physical function	Follows the device description.
Basic attack	Requires a usable Weapon Module.
Linked Technique	Requires the Module to be active and intact.
Special effect	Requires the conditions recorded on the Module.
Reaction	Requires the Reaction, where specified.

12.11.1 · MODULES AND TECHNIQUES

A Technique can be linked to a compatible Module through the Builder.

The link indicates which device is used to execute that move.

A Technique can use a weapon or a Module as its executor, never both simultaneously.

The Module does not generate the Technique.

The Technique must be possessed by the character and respect Grade, Attribute, Form, effects and costs.

If the Module is inactive, it must be activated before executing the Technique.

If it is damaged, the linked Technique cannot be executed until the device is repaired.

12.11.2 · EXAMPLE OF USE

EXAMPLE · MECHANICAL HARPOON

At the start of their turn, the Cyborg has another Active Module.

They change the Active Module for free, choosing the Mechanical Harpoon.

In the same turn, they can use their Action to make an attack or execute a compatible Technique through the Harpoon.

If the Technique costs ST and the Harpoon consumes Charges, they pay both resources.

Changing Module does not use the Bonus Action, which therefore remains available for Haki or Talents.

12.12 · MODULES AND SPECIAL MOVES

A Special Move can use a Module as the executor of its Technique.

The device must already be active and intact when the Special Move is executed.

Any special effect of the Module applies only when its conditions are met.

The Special Move does not grant free activations, additional charges or discounts not specified.

12.12.1 · PREPARATION OVER SEVERAL TURNS

A Special Move that requires Haki and an active Talent may need several turns of preparation because the two share the Bonus Action. The Module does not cause this preparation: it becomes Active through the turn's free change.

EXAMPLE · REACTOR STRIKE

SEQUENCE WITH MODULE, HAKI AND TALENT

TURN 1

PREPARING HAKI

Bonus Action: activate Haki, paying the necessary PIP.

TURN 2

EXECUTING THE MOVE

Maintain Haki, paying any ST cost.

Bonus Action: activate a compatible Talent.

Free change: make the Module Active, if it is not already.

Action: execute the Special Move using the Module.

Pay the Stamina of the Technique and any energy consumption of the Module.

The sequence is valid only when the Module has the necessary resources and all abilities involved are compatible.

The character cannot select a second Module as executor of the same Technique merely to add its effects.

12.13 · DAMAGED MODULES

A Module has two integrity states.

INTACT

OPERATIONAL

Can be used according to its rules.

DAMAGED

NON-OPERATIONAL

Cannot use its function, effect or linked Techniques.

A damaged Module stops working until repaired.

If it was the active Module, it remains recorded as the selected device but is marked as non-operational.

The character can choose to change Module according to the normal activation rules.

12.13.1 · When is it damaged?

Damage is determined by the Game Master as a narrative consequence of an attack, a particular situation or an overload specified by the blueprint.

Modules have no automatic Hit Point threshold.

A character does not automatically lose a Module whenever they suffer a certain amount of damage.

Likewise, reaching half HP does not automatically damage all implants.

Effects that specifically target a device can instead produce appropriate consequences.

12.14 · REPAIRING A MODULE

A Damaged Module must be repaired before becoming operational again.

TIER	REPAIR TIME
d6	10 minutes
d8	20 minutes
d10	30 minutes
d12	1 hour
d20	2 hours

With appropriate tools and spare parts, a normal repair outside combat succeeds without a Check.

If the work takes place in difficult conditions, with insufficient materials or on exceptional technology, the GM may require a Mechanics Check and establish the appropriate Threshold.

Repairing a Module does not restore HP to the Cyborg.

Recovering the body's HP and repairing a Module's Integrity are two distinct procedures.

12.15 · INSTALLING A NEW MODULE

A completed blueprint is not necessarily an installed Module.

Installation follows the procedure specified by the Workshop.

Prepare the blueprint
Define the physical function, requirement and any special effect.

Check slots
The character must have a free slot.

Check compatibility
Mechanical Body must meet the technological requirement.

Obtain materials
Gather the necessary components.

Carry out the work
A competent character works with appropriate tools and conditions.

Record the Module
The device is added to Mechanical Body and becomes available for activation.

Installation requires a free slot, Mechanical Body at least equal to Tier, the completed device and appropriate tools.

Base time depends on Tier:

d6	→	**30 minutes**
d8	→	**1 hour**
d10	→	**2 hours**
d12	→	**4 hours**
d20	→	**8 hours**

Exceptional materials, particular conditions or non-standard technologies may change the procedure at the GM's discretion.

The Cyborg's two initial Modules are the exception to the normal acquisition procedure: they are granted free during creation.

12.16 · EXPERIMENTAL MODULES

Experimental Modules are devices outside the ordinary options.

They can have original functions, but must respect the common structure: physical function, requirement, any Grade, only one Special Effect, resources and integrity.

The Game Master can introduce an experimental Module as a Special Blueprint. Once the blueprint is obtained, any character meeting the construction requirements can attempt to make it through the normal Workshop rules.

A ship Module is not automatically a body Module.

The two device types belong to different systems.

An engine installed in the engine room does not take up a Cyborg slot. A cannon integrated into an arm does not automatically take up a ship slot.

Installation rules and requirements must be applied to the correct system.

12.17 · MODULE OPERATIONAL SHEET

The operational sheet must allow the device's state to be consulted quickly during a session.

MODULE · SHEET

Name:

Technology Tier:

Category:

Structure:

Weapon Grade:

Physical function:

Inactive function:

Active function:

Special Effect:

Energy:

Capacity / Consumption / Recharge:

Compatible Techniques:

Limits:

Integrity: Intact / Damaged

Installation: Installed / Not Installed

Activation: Active / Inactive

The sheet must keep activation state and integrity state separate.

A device can be intact but inactive.

It can also remain selected as the active Module while damaged: in that case it does not work until it is repaired or replaced by another device.

CHAPTER 13 ·

THE SHIP AND NAVIGATION

Every crew needs a ship. It is the means of crossing the seas, but also the characters' home, the place where their treasures are kept and, when cannons begin to thunder, the crew's first line of defence.

In Grand Line Chronicles, the ship has its own sheet, statistics expressed through dice, Structure Points and installable Modules.

During a voyage, the Navigator guides it. In battle, instead, the whole crew must collaborate at the different stations.

A powerful ship without a capable crew remains only a large target.

13.1 · CREATING THE SHIP

Every ship has an identity, a technical sheet and a crew.

The player or Game Master must first define its narrative characteristics.

SHIP SHEET

ELEMENT	DESCRIPTION
Name	The ship's name.
Type	Its category and general structure.
Figurehead	The figure that characterises its bow.
Wood	The main material of the hull.
Statistics	Hull, Sails, Artillery and Structure.
Structure Points	The ship's resilience.
Modules	Installed equipment.
Crew	Characters assigned to stations.
Store	Available materials and resources.
Logbook	Cargo, Berry and voyage notes.

The name, figurehead and appearance do not automatically grant bonuses.

A figurehead may, however, become important to the story or gain specific properties through a Module.

The ship type is described freely and approved by the GM. There is no table automatically assigning different statistics to every vessel model.

13.2 · THE FOUR STATISTICS

The ship has four fundamental statistics.

HULL

Resilience and Structure Points.

SAILS

Navigation, speed, manoeuvres and initiative.

ARTILLERY

Cannon power and naval attacks.

STRUCTURE

Capacity to install Modules and support technical work.

Naval statistics use a different progression from that of characters.

D4

D6

D8

D10

D12

The ordinary maximum Grade for naval statistics is d12.

Unlike personal statistics, ship statistics do not normally reach d20.

A specific ability can nonetheless temporarily or permanently increase a statistic, respecting its description.

13.3 · THE STARTING SHIP

AN INITIAL SHIP NORMALLY HAS:

INITIAL CONFIGURATION

One statistic at d8.

The other three statistics at d6.

The crew chooses which statistic to raise to d8 in agreement with the Game Master.

A ship designed to withstand encounters could begin with d8 Hull.

A crew interested in speed could instead choose d8 Sails.

The default configuration in the Ship Portal uses d8 Hull and the other statistics at d6, but represents only an initial model.

13.4 · STRUCTURE POINTS

Structure Points (SP) represent the ship's resilience.

They function like a character's Hit Points, but belong exclusively to the vessel.

The maximum value depends on the Hull die.

HULL	MAXIMUM SP
d4	20
d6	30
d8	40
d10	50
d12	60

A Module or a specific ability can modify the maximum.

MAXIMUM STRUCTURE POINTS

HULL SP + MODIFIERS

When a ship takes damage, it is subtracted from its current SP.

When repaired, it recovers SP up to its maximum, unless effects specify different conditions.

The ship's SP are not transferred to characters.

A cannon shot can damage the hull without automatically dealing the same damage to every pirate on deck.

The GM determines any consequences for characters exposed to the explosion separately.

13.5 · SHIP CONDITIONS

Conditions depend on the percentage of current SP relative to the maximum.

HULL CONDITIONS

INTACT

OVER 75%

The ship is in operational condition.

DAMAGED

OVER 50% UP TO 75%

The hull has significant damage.

SEVERE

OVER 25% UP TO 50%

The ship risks losing essential components.

CRITICAL

OVER 0% UP TO 25%

A component may fail. The ship is close to sinking.

SUNK

0 SP

The ship can no longer continue normal navigation or combat.

The condition updates when SP change.

A ship can therefore go from Severe to Critical after a cannon shot, or improve its condition through repairs.

Some Modules modify sinking rules. Watertight Compartments, for example, allows the ship to withstand going below 0 SP and sink only at -10 SP.

This ability is an exception to the ordinary rule.

13.6 · DAMAGE TO COMPONENTS

A ship is not a single block of Structure Points.

When a ship enters Critical condition for the first time during a naval battle, roll 1d6 on the Components table.

D6	COMPONENT	CONSEQUENCE
1	Mainmast	Sails -1 die and speed halved.
2	Rudder	You cannot perform an Evasive Manoeuvre.
3	Cannon battery	Artillery -1 die.
4	Hold	Cargo damaged or lost.
5	Engine room	The ship cannot move actively.
6	Hull below the waterline	Maximum SP -10 permanently, until the damage is repaired.

The indicated component suffers the specified consequence.

Remaining in Critical condition does not trigger new automatic rolls each round.

If the ship is repaired above the Critical threshold and later enters it again due to new damage, make a new roll.

A Clean Hit against the hull does not automatically damage a component.

An attack can hit a component directly only if:

- An ability expressly permits it.
- The component is physically exposed and the Game Master considers it possible to target.

COMPONENT ALREADY DAMAGED

If the d6 indicates a component already damaged, reroll once.

If the second result also indicates a component already out of order, the Game Master can:

- Worsen its condition consistently.
- Or apply the damage to another exposed component.

REDUCING MAXIMUM SP

If damage reduces the ship's Maximum SP and Current SP exceed the new maximum, Current SP immediately fall to the new maximum value.

If they were already lower, they remain unchanged.

13.7 · CREW STATIONS

During a naval battle, characters take up stations.

Each station uses a specific Attribute and contributes to an aspect of navigation or combat.

STATION	ATTRIBUTE	TASK
Captain	Spirit	Coordinate and support allies.
Helmsman	Cunning	Navigation and manoeuvres.
Gunner	Technique	Use Artillery.
Lookout	Cunning	Spot dangers and ambushes.
Engineer	Cunning	Repairs and technical management.
Onboard fighter	Strength or Technique	Boarding and ship defence.

The station must be assigned to a crew member.

The benefits of Role Talents apply only when their respective conditions are met.

An experienced Navigator does not automatically grant their Navigation die to manoeuvres if they are not at the helm or do not possess the ability that allows it.

13.7.1 · MANOEUVRE FORMULA

MANOEUVRES NORMALLY USE:

MANOEUVRE ROLL

SHIP DIE + ATTRIBUTE

The ship statistic and Attribute depend on the station.

For example, a cannon shot uses Artillery and the Gunner's Technique.

An Evasive Manoeuvre uses Sails and the Helmsman's Cunning.

Abilities that add dice to the formula are applied separately.

13.7.2 · CREW AND MANOEUVRES

A station indicates who can make the Check required by the Manoeuvre.

Having several sailors at the same station does not automatically multiply the ship's number of Manoeuvres.

NPC crew members can:

- Occupy vacant stations.
- Make the rolls specified on their sheet.
- Execute an available ship Manoeuvre.

Any "one or two rolls per turn" granted by an NPC crew sheet indicate how many Checks that group can make within allowed activities, not how many additional naval Manoeuvres the ship gains.

A character may be able to reach several stations, but with only one main Action they can normally perform only one.

Available Manoeuvres and available Actions are required.

CANNONS

The Artillery die represents the overall power of the battery used for that Cannon Shot, not the exact number of physical cannons on deck.

An ability that makes "a cannon act twice" refers to the Artillery system or Module actually used; it does not automatically multiply the Cannon Shot by every decorative cannon on the ship.

13.8 · NAVIGATION

Navigation does not simply mean proceeding in the desired direction.

The crew must find a course, exploit the wind, recognise dangers and keep the ship operational throughout the voyage.

The Navigator is the character responsible for these activities.

13.8.1 · THE VOYAGE ROLL

The voyage uses the ship's Sails die and the Helmsman's Cunning.

VOYAGE ROLL

SAILS + CUNNING

Nautical instruments and compatible Talents can add dice.

The GM establishes the Threshold according to the course, weather and dangers.

There is no need to make a roll for every hour of sailing.

A Check can represent a significant part of the journey or a single particularly difficult passage.

13.8.2 · THE NAVIGATOR AT THE HELM

The Hand on the Helm Talent allows the Navigation die to be added to the voyage.

Any instruments can add further dice according to their descriptions.

13.9 · NAVIGATION INSTRUMENTS

Nautical instruments can improve the voyage.

Their effect depends on quality and intended use.

INSTRUMENT	BENEFIT
Standard compass	+d4 to Navigation rolls in the Blue Seas.
Handmade Log Pose	+d6 to Navigation rolls on the Grand Line.
Updated nautical chart	+d6 to the next roll on the charted course.
Detailed nautical chart	+d8 to rolls on the course; reusable for three voyages.
Handmade Eternal Pose	+d10 to rolls towards the set island.

Instruments must be usable in the region being crossed.

An ordinary compass does not replace a Log Pose on the Grand Line.

13.9.1 · LOG POSE

A Log Pose allows an island's magnetic field to be followed.

Once the destination is reached, it must be calibrated according to the conditions specified by the device and the course.

The handmade catalogue model requires 2d6 days of calibration.

This value belongs to the specific model and does not automatically constitute the universal time for every Log Pose in existence.

13.9.2 · ETERNAL POSE

An Eternal Pose permanently points to a single island.

It requires no calibration during the journey.

However, it is not an instrument that allows any destination to be freely chosen: its direction remains the one for which it was prepared.

13.10 · DANGERS DURING THE VOYAGE

The GM determines which obstacles arise during navigation.

They may include storms, unpredictable currents, shoals, fog, sea creatures or other dangers.

A Navigation Check allows them to be tackled, but the consequences depend on the situation.

The system has no universal table imposing a random encounter on every voyage.

13.10.1 · THE CHECK MARGIN

The margin indicates how well the crew handled the course.

MARGIN	OUTCOME
Below −3	Serious failure
−3 / −1	Partial failure
0	Barely successful
+1 / +3	Success
+4 or higher	Full success

A success allows the relevant section to be crossed.

A failure can cause a complication consistent with the journey, such as a diversion, a delay, ship damage or exposure to a danger.

There is no fixed damage for a failed voyage. The GM must determine the consequence according to the obstacle faced.

NAVIGATOR SIGNATURE · PERFECT COURSE

When you achieve a margin of at least +4 on a Navigation Check related to a crossing, you find a particularly favourable route.

You gain both of the following benefits:

Prepared course. Until the destination is reached, the crew keeps 1d6 of Course. Before making a Check directly related to the same crossing, the Navigator can consume this die and add it to the Check.
For example, this could involve:

- Overcoming a current.
- Facing a stretch of storm.
- Avoiding a shoal.
- Staying on course during an unexpected event.
- Making another crossing Check required by the voyage.

The die must be declared before the roll.

Only one Perfect Course can be kept at a time. Gaining the Signature again before using the die replaces the previous one.

Anticipated danger. The Game Master also reveals a real danger further along the route, if there is one that the course could reasonably allow you to foresee.
If the entire crossing is resolved with a single Check and no further Checks are required before arrival, the Course Die simply goes unused. The Signature's informational benefit still applies.

13.11 · NAVIGATOR TALENTS AT SEA

Some Talents modify how the crew tackles the voyage.

TALENT	BENEFIT
Eye of the Sky	Predict the weather with Advantage; if you anticipate a weather danger, the GM indicates its nature, origin and one concrete consequence.
Master Course	Anticipate a danger when planning the course, even without achieving a +4 margin.
Cartographer	Your charts count as detailed charts: +d8 and reusable.
Sound the Depths	Exploit shoals and shallow waters to take passages inaccessible to larger ships.
Impossible Course	Cross extreme routes that other ships must go around.
Harness the Storm	At the helm, you and the ship ignore penalties to Navigation and Manoeuvres due to rain, natural fog, rough seas, strong winds and storms; physical effects remain.
Never Lost	You always know where you are and can find places you have already visited again.

These abilities do not automatically require a new naval statistic to be introduced.

They modify Checks, consequences and possibilities for the voyage according to their descriptions.

13.12 · NAVAL COMBAT

When two ships enter a conflict, naval statistics are used.

The reference unit is no longer the individual character, but the ship with its crew.

FUNDAMENTAL RULE

ONE MANOEUVRE PER TURN

Every ship normally performs one manoeuvre during its naval turn.

Talents that explicitly grant additional manoeuvres are an exception.

During combat, the crew chooses whether to attack, avoid cannon shots, ram, flee or perform an emergency repair.

Individual stations determine who makes the Check.

ADDITIONAL MANOEUVRES AND CREW ACTIONS

An ability that grants an additional Manoeuvre to the ship increases the maximum number of naval Manoeuvres the ship can perform in that round.

However, it does not automatically grant an additional Action to characters.

Each Manoeuvre must be executed by a character or crew member who:

- Occupies a compatible station.
- Can actually execute the Manoeuvre.
- Has the necessary Action, unless the ability expressly says otherwise.

If two characters occupy different stations, each can therefore spend their Action to execute one of the available Manoeuvres.

A single character cannot use two Manoeuvres in the same round merely because the ship has two, unless they also have the necessary Actions.

An ability that grants an additional roll does not instead amount to an additional Manoeuvre. The roll modifies or completes the Manoeuvre indicated by the ability.

13.13 · NAVAL DISTANCES

Naval battles use four bands.

TIER	DISTANCE	OPTIONS
Alongside	0–20 m	Boarding and personal combat.
Under Fire	Up to 200 m	Cannon shots at full effectiveness.
In Sight	Up to 600 m	Long-range cannon shots.
On the Horizon	Beyond 600 m	Pursuit and navigation.

A manoeuvre normally allows one distance band to be gained or lost when the situation permits.

Distance in metres remains important to determine the possibilities of a character who directly attacks another ship through a Technique.

Naval bands do not automatically increase the reach of personal weapons.

13.14 · NAVAL MANOEUVRES

The five fundamental manoeuvres are Cannon Shots, Evasive Manoeuvre, Ramming, Escape and Emergency Repair.

Reference Thresholds are normally 8, unless firing distances or other conditions differ.

13.14.1 · CANNON SHOTS

CANNON SHOTS

OFFENSIVE

Station: Gunner.

Roll: Artillery + Technique.

Damage: 1 Artillery Die, unless Modules or abilities modify it.

TIER	DISTANCE	THRESHOLD
Alongside	0–20 m	8
Under Fire	over 20 m up to 200 m	8
In Sight	over 200 m up to 600 m	12
On the Horizon	over 600 m	Normally out of reach

In Sight represents long-range fire and therefore applies the normal increase of +4 to the ordinary Threshold of 8.

Beyond 600 metres, a Cannon Shot is not normally possible unless a Module or ability expressly grants greater range.

If the roll meets or exceeds the required Threshold, the cannon shot hits.

The enemy ship loses SP equal to the Artillery die result.

Example: a ship with d8 Artillery hits an opponent.

The Gunner rolls 1d8 to determine damage. They get 6.

The enemy ship loses 6 SP.

Any Modules, such as a heavy battery, may modify damage when used.

TARGET

An ordinary Cannon Shot targets the ship, not an individual character on deck.

Deliberately aiming at a person requires a situation in which the target is actually identifiable and exposed, and is resolved as an attack against a character, not a normal Cannon Shot against SP.

13.14.2 · EVASIVE MANOEUVRE

EVASIVE MANOEUVRE

DEFENSIVE

Station: Helmsman.

Roll: Sails + Cunning.

Ordinary Threshold: 8.

Success: the Threshold of the next enemy cannon shot against the ship increases by 4.

The Evasive Manoeuvre does not make the ship permanently harder to hit.

The benefit concerns the next cannon shot against it.

BORN HELMSMAN

The Navigator can improve the Evasive Manoeuvre through their Talents.

TALENT	BENEFIT
Born Helmsman · Basic	Adds the Navigation die to evasive manoeuvres.
Born Helmsman · Improved	Once per naval battle, completely cancels an incoming cannon shot.
Born Helmsman · Mastery	The ship can manoeuvre and fire in the same turn without penalty.

Cancelling the cannon shot is a specific effect of the improved Talent, not an automatic consequence of every Evasive Manoeuvre.

13.14.3 · RAMMING

RAMMING

OFFENSIVE

Station: Captain.

Roll: Hull + Strength.

Damage dealt: the Hull die result.

Backlash: your own ship still loses 1d4 SP.

Ramming requires the ships to be in a position that physically allows the collision.

The roll determines whether the manoeuvre succeeds.

On a success, the enemy ship takes the Hull damage.

The ramming ship still loses 1d4 SP.

STEEL RAM

The Steel Ram Module increases ramming damage by one step.

The benefit belongs to the Module: it does not apply to ships without it.

13.14.4 · ESCAPE

ESCAPE

MANOEUVRE

Station: Helmsman.

Roll: Sails + Cunning.

Failure: the enemy gains a cannon shot of opportunity.

Escape allows an attempt to move away from the opponent.

The result determines whether the ship manages to gain distance or remains exposed.

If the manoeuvre fails, the enemy ship gains the specified cannon shot of opportunity.

No personal Reaction attack is introduced: the cannon shot of opportunity is an effect of the naval manoeuvre.

13.14.5 · EMERGENCY REPAIR

EMERGENCY REPAIR

SUPPORT · NAVAL BATTLE

Station: Engineer.

Requirement: the Carpenter's Emergency Repair or another ability that expressly allows hull repair in battle.

Check: Structure + Cunning.

Threshold: 8.

Emergency Repair is a naval manoeuvre and uses the Action of the Carpenter executing it.

Repair tools and materials must be available onboard.

If the Check succeeds, the ship recovers 1 Carpentry Die in SP.

Recovery cannot exceed Maximum SP.

If the Check result exceeds the Threshold by at least +4, the Signature A Repair That Holds may activate.

Using Emergency Repair normally counts as the ship's manoeuvre for that turn, unless abilities grant further manoeuvres.

Ordinary repairs outside battle instead continue to use the Shipyard tables and are not replaced by this procedure.

13.14.6 · CHARACTERS, SHIPS AND TWO DAMAGE SCALES

HP and SP represent two different scales, but use the same numerical values when an attack can actually damage its target.

Personal attack against a ship. A character can deal SP only if their weapon, Technique or ability is physically capable of damaging a naval structure.
If it can, damage is rolled normally and the result is subtracted from SP at a 1:1 ratio.

A blow unable to seriously damage wood, metal or the structure concerned may deal no SP even if it would be perfectly effective against a creature.

Cannon Shot against a character. An ordinary Cannon Shot against the ship does not automatically deal HP to characters on deck.
If an individual artillery shot actually targets a character, roll Artillery + Technique against their normal Defence and, if it hits, deal 1 Artillery Die in HP.

Cover, Active Defence and abilities able to intercept the shot work normally when compatible.

Hull damage and people. Losing SP does not automatically deal the same amount of HP to the crew.
Explosions, splinters, collapses and other dangers can nevertheless produce separate consequences for characters, determined by the concrete source of the attack.

13.15 · NAVAL BATTLE EXAMPLE

Two ships meet on the open sea.

THE CHARACTERS' SHIP HAS:

THE NORTH STAR

EXAMPLE SHIP

HULL

D8

SAILS

D6

ARTILLERY

D6

STRUCTURE

D6

Structure Points: 40/40.

Module Slots: 2.

The enemy ship opens fire.

The Navigator decides to perform an Evasive Manoeuvre.

They roll Sails d6 + Cunning d8 and get a total of 11.

The ordinary Threshold is 8: the manoeuvre succeeds with a +3 margin.

The next enemy cannon shot against the North Star will have its Threshold increased by 4.

When the enemy ship fires, the difficulty is therefore higher.

On the next turn, the crew decides to use its cannon shots.

The Gunner rolls Artillery d6 + Technique d8.

If they reach the Threshold required by the distance, the shot hits and deals the Artillery die result.

If the North Star possessed Fair Winds, it could gain an additional manoeuvre per round when the conditions of the Talent are met.

13.16 · SHIP MODULES

The ship can be improved by installing Modules.

These devices are distinct from the body Modules in Chapter 12.

A naval Module takes up a certain number of ship slots and grants a specific property.

It can improve Artillery, increase resilience, support manoeuvres or provide equipment for the crew.

13.16.1 · MODULE SLOTS

Slots depend on the Structure statistic.

STRUCTURE	AVAILABLE SLOTS
d4	1
d6	2
d8	3
d10	5
d12	7

Each Module indicates how many slots it takes up.

Not all Modules require only one slot.

An onboard Workshop, for example, takes up two.

SLOT RULE

You cannot install a Module if its slot cost exceeds the capacity still available.

Improving the Structure statistic can increase the ship's slots.

13.16.2 · MODULE PROPERTIES

Naval Modules have effects defined by their sheets.

SOME EXAMPLES:

MODULE	EFFECT
Twin Cannons	One extra cannon shot per scene.
Armoured Hull	Reduces damage taken from cannon shots by 2.
Twin Rudder	+1 die to the Evasive Manoeuvre.
Navigator's Cabin	+1 die to Navigation rolls.
Onboard Workshop	Repairs: −25% hours and +1 die.
Watertight Compartments	The ship sinks only at −10 SP.

The complete catalogue remains in the Ship Portal.

Installing a Module does not automatically modify ship statistics unless the effect expressly specifies it.

13.16.3 · COMPLETE NAVAL MODULE SHEET

Every naval Module must explicitly indicate:

Name · Slots · Activation · Target or affected system · Numerical value · Duration or frequency · Any consumption · Limitations

Formulas such as "+1 die", "+initiative", "+cargo" or "automatic escape" must be completed before use.

- A dice bonus must indicate which die is added and to which Check.
- A Cargo bonus must indicate how many Hold Units are added.
- An Initiative bonus must indicate the value or die added.
- An automatic Manoeuvre must specify which Manoeuvre it replaces and which conditions it must still respect.

"Automatic escape", for example, means the normal Escape Check is not required; it does not allow you to pass through dry land, a physical barrier, a ship completely blocking the passage or another condition that makes moving away physically impossible.

13.17 · THE SHIPYARD

The Shipyard allows the ship to be repaired and its statistics improved.

The four statistics are upgraded separately.

Improvement requires materials, a Check and an appropriate Threshold.

THE ORDINARY CHECK USES:

SHIPYARD CHECK

CUNNING + CARPENTRY

The materials required depend on the statistic being improved and the new Grade.

13.17.1 · IMPROVING A STATISTIC

IMPROVEMENT	THRESHOLD
d4 → d6	8
d6 → d8	10
d8 → d10	12
d10 → d12	14

When the blueprint succeeds, the relevant statistic increases by one step.

Example: the crew wants to improve Sails from d6 to d8.

The blueprint requires Threshold 10 and the materials specified for the new Grade.

The Engineer rolls Cunning + Carpentry.

If successful, Sails increases to d8.

The increase does not automatically modify Hull, Artillery or Structure.

13.17.2 · PERMANENT SHIP IMPROVEMENTS

When a Carpenter Talent permanently modifies a ship through structural work, the benefit belongs to the ship, not the character.

Once the work is completed:

- The Carpenter does not have to remain onboard for the benefit to continue working.
- Selling the ship also transfers its improvements.
- Changing ships does not automatically transfer improvements to the new one.
- The permanent loss or destruction of the ship means losing its corresponding improvements.

Two characters possessing the same Talent cannot apply a benefit declared unique to the same ship several times.

Naval statistics retain the normal maximum of d12 unless an ability expressly declares it can exceed it.

Repairing or restoring the same ship normally preserves its already-installed improvements. If the vessel is completely rebuilt as a new ship, it is treated as a new hull.

13.18 · NAVAL REPAIRS

Repairs can concern the hull or a specific component.

The work sheet indicates hours, Threshold, materials, success result and consequences of a serious failure.

13.18.1 · REPAIRING THE HULL

WORK	HOURS	THRESHOLD
Light damage, 1–10 SP	8	7
Damaged condition	16	8
Severe condition	32	10
Critical condition	48	12

Ordinary repair requires the specified work and materials.

Light damage allows lost SP to be recovered according to the corresponding sheet.

With a +4 margin, light damage repair also recovers 2 additional SP, without exceeding the maximum.

For work on conditions, the sheet indicates improvement in the state and, where specified, additional SP recovery.

The GM must record SP and condition consistently, since the latter follows from the percentage of SP remaining.

13.18.2 · REPAIRING COMPONENTS

COMPONENT	HOURS	THRESHOLD	RESULT
Mainmast	24	10	Restores the full Sails die.
Rudder	16	9	Restores normal manoeuvres.
Cannon battery	20	10	Restores the full Artillery die.
Hold	12	8	Stops the consequences of a damaged hold.
Engine room	20	9	Restores normal movement.
Hull below the waterline	32	12	Restores the ordinary maximum SP.

The required materials are stated on the repair sheet in the Ship Portal.

A serious failure can worsen the damage: for example, a failed cannon-battery repair may cause an explosion dealing 1d6 SP to the ship.

Consequences depend on the specific work.

13.19 · ENGINEER TALENTS IN NAVAL BATTLE

Engineer Talents can radically change the ship's ability to withstand damage.

TALENT	BENEFIT
Emergency Repair	With the Emergency Repair manoeuvre, the ship recovers 1 Carpentry Die in SP.
Hands on Wood · Basic	Emergency Repairs recover +1 Carpentry Die in SP.
Hands on Wood · Improved	With the same Action, repair the hull and a damaged Module.
Hands on Wood · Mastery	Once per battle, restore a destroyed Module.
Reinforced Hull	The Damage Dice of cannon shots suffered by the ship decrease by one step.
Travelling Shipyard	Repair and upgrade the ship on the open sea, in half the time.
Module Master	The ship gains one additional Module slot.

These benefits require possession of the respective Talents.

The Engineer does not automatically gain them merely by occupying the technical station.

13.20 · BOARDING

When the ships reach the Alongside band, the crew can attempt to board the enemy vessel.

Boarding connects naval combat to personal combat.

Characters use the rules of Chapter 6 once the encounter on the decks begins.

13.20.1 · PREPARING TO BOARD

The crew must create a concrete opportunity to cross.

They can approach, use grappling hooks or exploit an appropriate Module.

Boarding Harpoons grant +1 die to boarding and allow the enemy ship to be held.

The Carpenter's Boarding Bridge Talent instead allows gangways and grappling hooks to be prepared through an Action.

The crew can cross them without making rolls and without provoking Reaction attacks during the crossing specified by the Talent.

13.20.2 · COMBAT ON THE DECKS

Once onboard, every character uses the normal personal rules.

Movement depends on Race, not the Sails die.

A pirate can use Techniques, Talents, Haki and Special Moves, respecting their Action economy.

The naval manoeuvre does not automatically grant an additional Action to every fighter.

The GM manages the sequence between ship actions and character actions according to the situation.

13.21 · NAVAL COMBAT ORDER

When two ships face each other, combat is organised into naval rounds.

Every ship has its own turn and can normally perform one manoeuvre per round. Talents and Modules that expressly grant additional manoeuvres are an exception.

13.21.1 · NAVAL INITIATIVE

At the start of the encounter, each ship's Helmsman makes a roll:

SHIP INITIATIVE

SAILS + CUNNING

The ship with the highest result acts first.

This formula uses the characteristics already associated with initiative and naval manoeuvres.

On a tie, the GM establishes which ship acts first considering position and the initial situation. No additional numerical modifier is specified.

The order remains unchanged during the encounter unless specific effects apply.

13.21.2 · THE SHIP'S TURN

During its turn, the crew chooses a manoeuvre and assigns its execution to the appropriate station.

The procedure is as follows:

- Declare the manoeuvre. The crew chooses Cannon Shots, Evasive Manoeuvre, Ramming, Escape or Emergency Repair.
- Identify the station. The assigned character uses the required Attribute.
- Make the roll. Add the naval statistic die and the Attribute die, applying any bonuses.
- Resolve the effect. Apply damage, displacements, repairs or other specified results.
- Pass to the next ship. The crew waits until the next round to choose another manoeuvre, unless exceptions apply.

Having several characters at stations does not grant an additional manoeuvre to each.

A Gunner and a Helmsman can both be ready, but the ship normally chooses only one manoeuvre.

Exception: Born Helmsman · Mastery allows manoeuvring and firing in the same turn without penalty. Other abilities may grant further exceptions according to their descriptions.

13.21.3 · MIXED COMBAT

When ships fight at range and no character is directly involved in a personal encounter, the ship's turn is normally used.

When the following begin simultaneously:

- Boarding.
- Fighting on deck.
- Displacements between ships.
- Personal attacks against crews or structures.

the scene switches to a shared personal Initiative.

All characters normally roll **Technique + Cunning**.

Each personal combat round also counts as a naval round.

Within that round, each ship normally retains 1 naval Manoeuvre, plus any additional Manoeuvres granted by Talents or Modules.

A Manoeuvre is executed during the personal turn of the character occupying the appropriate station and uses their main Action.

The character does not receive an additional Action because they are operating a station.

Effects lasting "one turn" or "one round", including Haki, Statuses and upkeep, use the normal personal round.

An ability allowing a jump, movement or intervention between two ships is therefore resolved during the character's normal turn or through the Reaction indicated by the ability.

For ships controlled mainly by NPCs, the Game Master can use a single crew turn to resolve the naval Manoeuvre without assigning an individual Initiative to every sailor.

13.22 · APPROACH AND PURSUIT

A naval battle is not necessarily a static exchange of cannon shots.

One ship may try to catch another to board it. Another may try to escape combat, exploiting the wind and its manoeuvrability.

Distances are represented through the four naval bands.

DISTANCE BANDS

- Alongside · 0–20 m
  The ships are close enough to attempt boarding.
- Under Fire · Up to 200 m
  Cannon shots can be made at ordinary distance.
- In Sight · Up to 600 m
  Cannon shots require greater precision.
- On the Horizon · Over 600 m
  The ships are far apart. The scene is primarily a pursuit.

13.22.1 · CHANGING BAND

A successful movement manoeuvre normally allows the distance to change by one band.

An approaching ship can move from In Sight to Under Fire.

An escaping ship can move from Under Fire to In Sight.

The manoeuvre does not automatically allow several bands to be crossed in the same turn.

A Talent or Module can modify this limit when expressly specified.

13.22.2 · PURSUIT BETWEEN TWO SHIPS

When one ship tries to escape and the other wants to prevent it, both make an opposed Check:

Sails + Cunning

The escaping ship uses its Helmsman. The pursuing ship uses its Helmsman to maintain contact.

The highest result determines who manages to impose their manoeuvre.

OUTCOME	CONSEQUENCE
The escaping ship wins	Distance increases by one band.
The pursuing ship wins	Escape is prevented; distance does not increase.
Tie	The ships remain in the current band.

This procedure makes the resolution of opposed manoeuvres explicit, which previously had no dedicated formula.

CANNON SHOT OF OPPORTUNITY

If Escape fails, the pursuing ship gains the cannon shot of opportunity specified by the manoeuvre.

The cannon shot can be made only if the enemy ship is within a distance reachable by Artillery.

The cannon shot of opportunity does not automatically allow a ship already out of reach to be hit.

13.22.3 · ENDING A PURSUIT

Reaching the On the Horizon band does not necessarily end pursuit: the two ships could still see each other.

The GM determines when contact is permanently lost, considering visibility, sea conditions, navigation instruments and actual possibilities of continuing.

No fixed number of rounds is required to disappear over the horizon.

An immobilised ship cannot gain distance through a normal Escape manoeuvre. If the Engine Room is destroyed or other damage prevents active movement, the crew must first solve that problem or exploit an ability that expressly allows movement.

13.23 · SINKING AND RESCUE

When the ship reaches 0 Structure Points, it enters the Sunk state.

It can no longer continue normal navigation or combat.

This state does not mean that all characters onboard die instantly.

The GM describes the consequences according to the nature of the damage: a ship could split during Ramming, take on water through a breach or progressively lose the ability to float.

13.23.1 · WHEN THE SHIP REACHES THE SINKING THRESHOLD

When a ship reaches its sinking threshold, the Game Master immediately declares what type of failure is occurring.

Slow failure · 3 rounds. The ship takes on water or gradually loses buoyancy. The crew has three complete rounds to evacuate or attempt intervention. **Rapid failure · 1 round.** A serious breach or structural failure leaves only one complete round before the ship is lost. **Catastrophic failure · immediate.** The ship is split, explodes or instantly loses the ability to stay afloat. Characters can use only Reactions or abilities that declare they can intervene at that moment.
The GM chooses the profile according to the cause of the damage and must communicate it clearly when the ship reaches the threshold.

A repair that brings the ship above its sinking threshold before failure can stop the process if the physical cause allows it.

13.23.2 · ABANDONING SHIP

If sinking leaves time to react, characters can attempt to save themselves.

The possibilities depend on the tools available and the situation.

A lifeboat can allow the vessel to be left. A character could reach a nearby ship, cling to a wreck or use a mobility Technique.

When the outcome is uncertain, the GM requires an appropriate Check, such as Athletics, Acrobatics or another relevant Skill.

Distances and Movement follow the ordinary rules.

Devil Fruit users remain subject to their weakness to the sea. They cannot ignore it merely because they are trying to abandon a ship.

EVACUATION

During each available round, a character can normally use Movement and Action to:

- Reach a lifeboat.
- Free a companion.
- Retrieve an object.
- Jump onto another ship.
- Attempt a repair.
- Use a mobility ability.

Passengers not managed individually are evacuated through crew actions and available resources; if the outcome is uncertain, the GM requires an appropriate Check.

13.23.3 · WATERTIGHT COMPARTMENTS

MODULE · WATERTIGHT COMPARTMENTS

The ship withstands going below the ordinary threshold of 0 SP.

It sinks only when it reaches −10 SP.

The Module modifies only the sinking threshold.

It does not restore SP or automatically repair damaged parts.

A ship at −4 SP with Watertight Compartments is not intact: it is severely compromised, but the Module allows it to stay afloat until the specified threshold.

The sinking threshold becomes −10 SP. From 0 to −9 SP, the ship is still afloat but remains in Critical condition and severely compromised.

13.23.4 · LIVING FIGUREHEAD

The Living Figurehead Module allows the ship to withstand a fatal blow.

Once per adventure, when a blow would bring it to the sinking threshold, it remains at 1 SP.

The benefit applies to the single fatal blow.

It does not automatically protect the ship from all subsequent attacks.

Living Figurehead prevents one fatal blow and leaves the ship at 1 SP. It does not initiate sinking. If a subsequent blow brings it to the threshold again, the normal rules apply.

13.23.5 · Carpenter Ultimate: She Will Not Sink

SHE WILL NOT SINK

Ultimate

Frequency: once per naval battle.

When the ship would fall to 0 SP or less:

- It stays afloat with 1 SP and, until the end of the battle, cannot fall below 1 SP.
- It can continue to perform manoeuvres made possible by the situation.
- All Destroyed Modules temporarily become operational again.

If active, it takes precedence for its duration: the ship remains at 1 SP and does not enter the sinking process until the end of the battle.

At the end of the battle

The ship remains at 1 SP, in Critical condition; Modules return to their actual previous condition and a real Shipyard is required for structural repairs.

The Ultimate is not a permanent repair. Its complete description is in the Carpenter Talent (§ 4.9.1).

13.24 · VOYAGES AND RESOURCES

A journey on the Grand Line may require a few hours or entire weeks.

Its duration depends on the course, sea conditions, ship and Navigator's abilities.

The system does not assign a universal speed in kilometres per day for every Sails Grade.

13.24.1 · ESTABLISHING JOURNEY DURATION

Before departure, the Game Master gives the crew a voyage estimate when the characters have the necessary information.

The estimate considers distance, course, weather conditions, ship characteristics and available instruments.

The Navigator can use the Navigation Skill to assess conditions along the route.

A Log Pose allows the destination's direction to be identified, but does not automatically remove storms, currents or other obstacles.

DIVIDING THE JOURNEY INTO LEGS

A long voyage can be divided into several significant legs.

For example:

EXAMPLE · JOURNEY TO AN ISLAND

- Departure from port
  The crew prepares the ship and puts to sea.
- Crossing the current
  The Navigator tackles a dangerous section with a Check.
- Open-sea navigation
  The voyage proceeds normally until a new obstacle emerges.
- Approaching the island
  The crew must recognise the landing place and overcome any coastal dangers.

There is no need to roll dice for every calm day.

Checks are required when the result can significantly change the journey.

13.24.2 · PROVISIONS AND CARGO

Provisions are recorded in the Ship's Logbook, together with cargo and other ship resources.

They include what the crew has actually taken onboard for the voyage.

To avoid excessive bookkeeping, the GM can record supplies relative to the expected journey duration and check whether they remain sufficient when the voyage experiences a significant delay.

The initial amount of provisions must be agreed before departure, not determined retroactively solely to make things difficult for the players.

HOLD UNITS

The Hold uses abstract Units to represent cargo, barrels, crates, materials and bulky provisions.

Ordinary capacity depends on Structure:

STRUCTURE	HOLD UNITS
d4	8
d6	12
d8	16
d10	20
d12	24

Small personal items, weapons carried by characters and normal individual equipment do not take up Hold Units.

One Unit approximately represents a crate, a barrel or an equivalent amount of cargo.

PROVISIONS

One Provision Unit supports up to 5 people for one week.

Crew and passengers are added together to determine consumption.

Example: a ship with 10 people consumes 2 Provision Units per week.

Fractions are rounded up at the end of each week of travel.

An ability that reduces provision consumption modifies this value before rounding.

CARGO AND MODULES

Hold Units and Module slots are completely separate resources.

Module slots represent the ship's structural capacity to house installations.

Hold Units represent the space available to transport resources and goods.

Installing a Module does not automatically occupy Hold Units unless its sheet declares it.

EXPANDED HOLD

The Expanded Hold Module allows more cargo and provisions to be carried.

It does not automatically produce new supplies.

The benefit increases the ship's carrying capacity; resources must still be purchased or obtained.

Expanded Hold must expressly indicate how many Units it adds. A generic description such as "increases cargo" is not sufficient for a usable sheet.

13.24.3 · DELAYS AND UNFORESEEN EVENTS

Failure during a Navigation Check can change the voyage.

The GM chooses a consequence consistent with the obstacle faced: a delay, a diversion, ship damage or exposure to a new danger.

Failure does not necessarily have to cause all these consequences simultaneously.

If the ship takes damage, it is managed through Structure Points and hull conditions.

If the journey becomes longer, the GM updates the estimated duration and checks provision availability.

13.24.4 · RUNNING OUT OF SUPPLIES

When provisions run out, the crew must find a solution through available resources and abilities.

They can try fishing, searching for food on an island, reaching a port or using appropriate Talents.

Survival, Nature and Exploration Checks can be used when relevant.

Running out of provisions does not automatically deal a fixed amount of damage: the rules do not yet define a universal numerical progression for hunger and dehydration.

The GM describes the consequences and uses the survival rules agreed for the campaign, taking the crew's concrete possibilities into account.

CHAPTER 14 ·

GALLEY AND COOKING

A crew may possess a formidable ship and legendary weapons, but after days of sailing, battles and sleepless nights, even the hardiest pirate needs a hot meal.

In Grand Line Chronicles, Cooking allows ingredients to be turned into dishes capable of restoring Hit Points (HP) and Stamina (ST). Results depend on the recipe and the skill of whoever prepares it.

The Cook is the specialist in this system: they can tackle more ambitious recipes, improve meal benefits and prepare banquets for the whole crew.

The complete recipe book remains in the digital Galley. This chapter contains only the rules needed to use it and create new dishes.

14.1 · THE COOKING CHECK

Preparing a dish requires a Check using:

PREPARATION CHECK

SPIRIT + COOKING

The result is compared with the recipe's Threshold.

Every dish states its own Threshold. Simple recipes can be prepared with ordinary ingredients, while more ambitious ones require greater experience and unusual raw ingredients.

THRESHOLD	PREPARATION TYPE
6	Simple recipe
8	Ordinary recipe
10	Ambitious recipe
12	Particularly ambitious recipe

These values represent the Thresholds in the recipe book, not a rule forcing every new recipe to use only these four numbers.

The Game Master can approve recipes with different requirements.

THE ROLE OF THE COOK

The Heart and the Engine Trait reserves ambitious dishes, generally those with Threshold 10–12, for the Cook.

A character with the Cooking Skill but not the Cook Role can attempt preparations within their expertise.

Having a high Cooking die does not automatically remove this distinction between Skill and Role Trait.

14.2 · PREPARING A DISH

Before making the Check, the player chooses a recipe and checks that they have the necessary ingredients and conditions.

Choose the recipe. Select an official dish or use a custom recipe approved by the GM.

Check ingredients. The Galley must have the required raw ingredients.

Devote the necessary time. Preparation must occur under conditions compatible with the recipe and any Talents possessed.

Make the Check. Roll Spirit + Cooking against the dish's Threshold.

Record the result. The prepared dish retains the outcome achieved, which determines its benefits when consumed.

A dish is prepared before being served. During combat, you cannot declare that you have cooked a recipe that was not prepared.

The Battlefield Service Talent allows an already-prepared dish to be served during the encounter, not cooked instantly.

PORTIONS

Ingredient quantities stated by a recipe normally represent the ingredients required for one portion.

Preparing several portions proportionally multiplies the ingredients required.

The Check can be made once for a batch of the same dish prepared simultaneously; every portion of that batch retains the same outcome.

Cook's Hand · Improved is an exception: a single portion prepared by the Cook can benefit two companions.

War Banquet still requires enough ingredients to actually feed the crew, but uses a single preparation Check for the entire banquet.

14.3 · THE FOUR COOKING OUTCOMES

The Check value is compared with the Threshold to determine the margin.

Margin = result − Threshold

Every recipe states four possible results.

NEGATIVE MARGIN

FAILURE

The dish produces the benefit indicated in the recipe's Failure entry. It may recover nothing, but some recipes retain a minimal effect.

MARGIN 0

BARELY SUCCESSFUL

Preparation barely succeeds and produces the reduced benefit stated in the recipe.

MARGIN +1 / +3

SUCCESS

The dish produces its ordinary benefit.

MARGIN +4 OR HIGHER

CRITICAL

The dish achieves the maximum result specified by the recipe. For the Cook, the Signature The Pinnacle also activates.

A Critical depends on a margin of at least +4, not simply rolling the maximum result on a single die.

FAILURE IS NOT ALWAYS IDENTICAL

The dish sheet establishes the effects of every outcome.

Some recipes state no recovery on failure. Others may retain a small benefit.

The GM must not replace the recipe's Failure entry with an invented penalty.

14.4 · RECOVERING HP AND STAMINA

Dishes can recover HP, ST or both resources.

The amount depends on the outcome achieved during preparation.

RESOURCE	HOW IT WORKS
HP	The character recovers the indicated Hit Points.
ST	The character recovers the indicated Stamina.
HP and ST	Both recoveries stated in the recipe apply.

Recovery cannot exceed the ordinary maximum value of the resource unless an ability expressly specifies increasing its maximum.

A dish restoring 4 ST does not permanently increase the character's maximum Stamina.

A Talent such as The Legendary Banquet, however, can explicitly modify that limit.

ONE RECIPE, DIFFERENT RESULTS

A DISH COULD STATE:

OUTCOME	HP	ST
Critical	2d6+2	+3
Success	1d8+2	+2
Barely successful	1d4	+1
Failure	None	None

This is a structural example taken from the recipe book, not a universal table applicable to every dish.

A fruit-based dish, for example, could mainly recover Stamina, while other recipes might favour HP.

MEAL BENEFITS

A character can gain HP and ST recovery from only one ordinary meal per scene.

Consuming further dishes in the same scene is possible narratively, but does not grant HP or ST recovery again.

The limit resets when a new significant scene begins or after a Rest.

Abilities that expressly declare they can serve a new meal during the encounter — such as Legendary Second Fire — are an exception and produce their effects according to their descriptions.

Two dishes granting the same temporary bonus do not stack that benefit: use the higher value.

Different bonuses can coexist when their rules allow it.

14.5 · DISH CATEGORIES

The Galley organises recipes into categories.

Each category describes a family of preparations and makes appropriate ingredients easier to identify.

CATEGORY	CHARACTERISTICS
Meat	Substantial meat-based preparations.
Fish	Dishes based on fish and seafood.
Vegetables	Vegetable preparations, soups and side dishes.
Fruit	Fresh fruit, fruit salads and drinks.
Sweets	Desserts and sweet preparations.
Broth	Broths, light soups and liquid preparations.

Exotic ingredients also form a particular sourcing category.

The category alone does not determine how many HP or how much ST a dish recovers. The recipe's values always establish this.

CATEGORY BONUSES

Certain ingredients and categories can provide supplementary benefits.

The Galley reference includes, among others, these cases:

CONDITION	STATED BENEFIT
Fresh fish	+1 bonus die.
Fresh tropical fruit	+1 ST to the outcome.
Exotic ingredients	+1 bonus die and increased bonuses.

For benefits that do not specify which roll or recovery the die is added to, the GM must define its application before preparation.

Do not assume "+1 bonus die" automatically means +1 Hit Die, +1 Damage Die or +1 die to any Check.

The recipe and ingredient description remain the main reference.

DICE GRANTED BY INGREDIENTS

A die granted by an ingredient is never added to the Cooking Check unless the sheet expressly says it modifies the Check.

If it modifies a recovery, it must indicate which resource it modifies and which die is added.

14.6 · SPECIAL INGREDIENTS

Some ingredients possess properties that modify the dish's result.

The bonus applies according to the conditions stated by the ingredient.

EXAMPLES OF NOTABLE INGREDIENTS

BANANAWANI MEAT

RARE

+1d6 extra HP on any outcome.

SEA KING MEAT

UNCOMMON

+1d4 HP and +1 ST on any outcome.

DEEP-SEA SQUID

RARE

+1d4 extra ST only on a Critical or Success.

GLOWING SEA MUSHROOM

RARE

+2 ST on any outcome.

The description “on any outcome” also includes Failure when the ingredient can actually be used in the recipe.

An ingredient working only on Success or Critical does not instead grant its benefit on a barely successful outcome.

Ingredient bonuses do not cancel the requirements for obtaining them.

A rare sea creature could require a fishing expedition, while a legendary ingredient might be available only on a particular island.

EXTRA INGREDIENTS

A preparation can normally use only one Extra Ingredient beyond the ingredients required by the recipe.

Mandatory recipe ingredients do not count towards this limit.

An Extra Ingredient is consumed during preparation and applies only the benefit stated on its sheet.

Two copies of the same Extra Ingredient cannot be used to stack the same benefit several times unless a recipe expressly declares otherwise.

Different ingredients can produce different effects only when they are already part of the recipe or an ability expressly permits more than one to be used.

AVAILABILITY AND STORAGE

The Galley reference distinguishes common, uncommon, rare and legendary ingredients.

Some products can be purchased in ports. Others must be caught, gathered or obtained during adventure.

The GM checks that the crew actually possesses the required ingredients.

Cooking does not create raw ingredients from nothing.

STORAGE

Unless the recipe states otherwise:

- A freshly prepared dish retains its benefits for 24 hours.
- A fresh ingredient normally keeps for 3 days.
- Dried, salted, canned or specially preserved ingredients follow the duration stated on their sheets and can normally last for weeks.

A refrigerated Galley, suitable container or another preservation system can extend these times according to its description.

When food exceeds its storage time, it does not automatically retain the mechanical effects recorded during preparation.

14.7 · THE COOK’S SIGNATURE: THE PINNACLE

THE PINNACLE

SIGNATURE · MARGIN +4

When the Cook achieves a Critical on a Cooking Check, the dish becomes a masterpiece.

Apply the recipe’s Critical result and also activate the specified Category Bonus.

The Signature does not automatically double all recipe values.

Recovery is as specified for the Critical, modified only by the benefits actually applicable.

The Battle Cook Talent can bring Category Bonus activation forward to a normal Success.

14.8 · CREATING A CUSTOM DISH

To create a new recipe, first choose an official reference recipe with a similar Threshold and function.

The new recipe uses that sheet as its power limit.

Define:

FIELD	DESCRIPTION
Name	Dish name.
Category	Meat, Fish, Vegetables, Fruit, Sweets or Broth.
Ingredients	Necessary raw ingredients.
Threshold	Preparation difficulty.
Time	Time required.
Critical	Maximum recovery.
Success	Ordinary recovery.
Barely successful	Reduced recovery.
Failure	Any minimal recovery or absence of benefits.
Bonus	Additional ingredient and category properties.

A custom recipe can redistribute its recovery between HP and ST, but should not exceed the overall value of an official recipe of the same tier without requiring rarer ingredients or a higher Threshold.

An ingredient's rarity alone does not grant a universal numerical value.

A rare ingredient produces only the bonus stated on its sheet.

Benefits belonging to Cook Talents — for example:

- More recipients.
- Automatic Status removal.
- Multiplied recovery.
- Quick service in battle.

cannot be included in a custom recipe for free.

Any original effect must be defined and approved before the Cooking Check.

The Check result decides which of the four recorded outcomes applies: it does not allow new effects to be chosen after the roll.

14.9 · COOKING DURING A VOYAGE

A ship with a working Galley allows meals to be prepared during navigation when conditions permit.

The crew must have enough ingredients and the time required by the recipes.

There is no universal duration applicable to every dish.

Some preparations require little time. Elaborate recipes and banquets may require hours.

EXPRESS COOKING

The Express Cooking Talent allows the Cook to prepare a dish during a short break that would normally require hours.

The ability reduces preparation time according to its effect.

It does not make ingredients free or turn cooking into a combat Action.

THE COUNTER

The Counter Talent allows the Cook to set up a field kitchen anywhere they have a fire and a work surface.

They suffer no normal penalties due to a lack of equipment.

The Talent does not remove the need for ingredients.

14.10 · SERVING FOOD DURING COMBAT

Normally, preparation takes place before the encounter.

The Battlefield Service Talent is an exception allowing the Cook to quickly distribute an already-prepared ration.

CONSUMING A MEAL

A normal meal is not a combat item.

Outside an encounter, consuming a portion normally requires a few minutes and the benefit applies at the end of the meal.

During combat, a character cannot freely consume a normal dish with a simple Action unless an ability expressly permits it.

Battlefield Service, Sovereign Service and similar abilities are exceptions.

BATTLEFIELD SERVICE

D8 TALENT

Action · Conscious target within 5 metres.

Requirement: possess an already-prepared portion.

Serve an already prepared portion to a conscious companion within 5 metres.

Delivery and consumption are part of the Cook's same Action.

The recipient does not spend their own Action.

This ability does not include any Displacement by the Cook: the target must already be within 5 metres.

There must also be a physically possible way to deliver the food; a closed wall or another impassable obstacle prevents service.

The recipient must be conscious and physically able to eat or drink.

An Unconscious character cannot receive the benefits of a normal meal through this ability.

Serving the dish does not require a second Cooking Check: the result was already determined when the recipe was prepared.

Using the Talent does not create an additional portion or allow a different outcome to be chosen.

SECOND FIRE

The Cook's Second Fire Talent, available in the d12 tier, allows a ration to be thrown to a companion within 5 metres when they fall below half their HP.

The ability uses a Reaction, can be used once per encounter and immediately restores 1d6 ST to the companion.

It does not require a Bonus Action.

14.11 · TALENTS THAT IMPROVE DISHES

Cook Talents modify preparation, number of recipients and meal benefits.

TALENT	EFFECT
Cook's Pantry · d8	Add the Cooking die to rolls to search or fish for ingredients.
Never on an Empty Stomach · d8	Your dishes perform at least as well as a barely successful outcome, even if the Check fails.
Cook's Hand · Basic · d8	Add a die to the resource recovered by the dish, HP or ST, according to the effect. If the dish recovers both, choose only one resource at preparation.
Battle Cook · d10	The Category Bonus already activates on a Success.
Speciality · d10	Choose a dish from the catalogue and reduce its Threshold by 2.
Cook's Hand · Improved · d10	One preparation can be consumed by two companions; both receive the outcome.
Cook's Hand · Mastery · d12	Your dishes also remove one removable negative Status from whoever consumes them.
War Banquet · d12	Prepare a meal before the encounter and apply the outcome to all companions taking part in the banquet.

Talents with prerequisites retain their progression.

Cook's Hand · Improved requires the Basic version. Cook's Hand · Mastery requires the Improved version.

PORTIONS

Under ordinary conditions, a preparation benefits one recipient according to its recipe.

Cook's Hand · Improved allows the result to be extended to two companions.

War Banquet instead allows the same outcome to be distributed to all crew members taking part in the prepared meal.

These Talents explicitly modify the number of recipients: they are not benefits automatically granted to every preparation.

14.12 · THE LEGENDARY BANQUET

THE LEGENDARY BANQUET

ULTIMATE · D20

The Cook prepares a banquet capable of restoring the strength the crew needs to face an entire adventure.

Frequency: once per adventure.

Requirements: the Cook's Ambition and the Game Master's permission.

Preparation requires hours of work, real ingredients and a crew that sits down to eat.

IMMEDIATE EFFECTS

No Cooking Check is required.

The banquet automatically counts as a Critical for every companion participating.

HP and Stamina recovery effects are doubled.

EFFECTS UNTIL THE END OF THE ADVENTURE

EACH CHARACTER WHO ATE RECEIVES:

+2 MAXIMUM ST

The bonus temporarily modifies maximum Stamina.

THE WILL TO RISE AGAIN

The first blow that would bring the character to 0 HP instead leaves them at 1 HP.

When the adventure ends, the maximum Stamina bonus ends.

Protection from the fatal blow can intervene only once for each character who took part in the banquet.

The Legendary Banquet cannot be declared retroactively after the crew has been defeated.

It requires real preparation and a dedicated narrative moment before its benefits can apply.

14.13 · PREPARATION EXAMPLE

The crew's Cook decides to prepare a Battle Stew before setting sail.

The official recipe requires game meat, potatoes, onions and broth. It has Threshold 10 and uses Spirit + Cooking.

BATTLE STEW

THRESHOLD 10

SPIRIT + COOKING

MEAT

The Cook has d8 Spirit and d10 Cooking.

They make the roll and get 13.

The dish achieves a normal Success.

STEW BENEFIT

1D8+2

HP RECOVERED

+2

ST RECOVERED

IF THE COOK POSSESSES SPECIALITY

If they chose the Stew as their Speciality, the Threshold falls from 10 to 8.

With the same result of 13, the margin becomes +5.

Preparation therefore achieves a Critical and uses the corresponding recipe benefits.

The Cook can record the preparation in the Session Log through the Galley, noting the dish made and the result achieved.

NAKAMA BONDS

15.1 · THE NAKAMA BOND

A Nakama Bond represents the trust and understanding developed between two companions.

Every Bond begins at 0.

At 0, the Bond exists narratively but does not yet grant a die.

When it grows, it follows the progression:

0 → d4 → d6 → d8 → d10 → d12 → d20.

The Bond does not grow through Ability Points. The Game Master establishes when shared events justify an increase.

15.2 · NAKAMA AID

A character can use their Bond to help a companion when their contribution is concretely possible.

A single roll can receive the Nakama die of only one companion.

DURING AN ENCOUNTER

Each character can provide Nakama Aid once per encounter.

OUTSIDE COMBAT

Each character can use Nakama Aid once per scene.

The helped companion adds to their roll the Bond die the helper has towards them.

During combat, helping uses the helper's Action. If help is provided outside their turn, the character gives up their next Action.

Outside combat, this Action economy does not apply unless the scene expressly uses a turn structure.

The Game Master always checks that intervention is actually possible in the situation.

CHAPTER 16 ·

ADVANCEMENT AND UPGRADES

No pirate is born a legend.

You become stronger by surviving encounters, learning from your mistakes and crossing seas that seemed impossible. But growing does not just mean dealing more damage: a Navigator can learn to read unfamiliar currents, a Doctor can perfect their healing and a Captain can find the courage to lead the crew against a much stronger enemy.

In Grand Line Chronicles, character growth follows different paths:

Ability Points (AP) allow Attributes, Skills and abilities that expressly declare they use them to be developed.

Custom Techniques follow the limit of the Attribute used.

Upgrades represent major moments of growth in the story and grant resources, AP and Talents.

Fruit and Haki follow their respective narrative progressions.

These systems work together, but are not the same thing. A pirate can perfect their abilities through experience without waiting for an Upgrade. Conversely, an Upgrade grants benefits not obtained simply by accumulating AP.

16.1 · PROGRESSION DICE

Attributes, Skills and Techniques use the same ordinary advancement scale. The Prestige Manual extends Attributes and Skills beyond d20: d20+d4, d20+d6, d20+d8,

d20+d10, d20+d12 and d20+d20 (Saikyō). Each progression remains independent. The ordinary Technique catalogue retains its Grades, slots, costs and requirements.

PROGRESSION SCALE

d4 → d6 → d8 → d10 → d12 → d20

An advancement increases the die by one step.

You cannot jump directly from d4 to d10 by paying only the cost of the final step.

When a Skill die increases, that improvement applies to all Checks using the Skill.

Techniques have no AP of their own. For Custom Techniques: their Grade can be increased when the Grade of the associated Attribute allows it.

When a Technique's Grade increases, its Technique Die, Damage Die and available Slots grow.

Increasing the die does not automatically add new effects to the Technique: the character must modify it through the Builder, respecting its requirements.

16.2 · ABILITY POINTS

AP represent mastery gained through experience and training.

They are distributed among Attributes, Skills and any abilities that expressly declare they use AP.

Techniques, both racial and Custom, neither accumulate nor spend AP of their own.

Every Attribute and Skill has an individual progression.

A pirate can therefore have many AP accumulated in Athletics and few in Navigation.

AP are not Berry and cannot be used to buy weapons, materials or Modules.

How are they gained?

There are two sources.

Experience during the story. Using a Skill in significant situations can cause it to accumulate AP. The Game Master determines how many to award.

Upgrade reward. When granting an Upgrade, the Game Master also awards an amount of AP the player can freely distribute between Attributes and Skills. Racial and Custom Techniques receive no AP.

There is no fixed amount of AP for each successful roll. Their award must reflect the pace of the campaign, without forcing players to continually repeat irrelevant Checks to accumulate points.

16.3 · ADVANCEMENT THRESHOLDS

To increase a die, the character must accumulate the AP required for the next step.

STEP	AP REQUIRED
d4 → d6	10
d6 → d8	25
d8 → d10	60
d10 → d12	150
d12 → d20	400

These are the manual's reference values. The Game Master can modify them according to the expected campaign duration.

AP thresholds apply to Attributes, Skills and abilities that expressly declare they use Ability Points.

They do not apply to Custom Techniques.

Spending AP

When a character has enough AP on an ability, they can spend them to increase its die by one step.

The necessary points are subtracted from that ability's progression.

Any remaining AP are kept.

EXAMPLE · IMPROVING A SKILL

A pirate has Athletics d6 and has accumulated 32 AP on that Skill.

Reaching d8 requires 25.

BEFORE

ATHLETICS D6

32 P.A.

AFTER

ATHLETICS D8

7 AP REMAINING

The character has reached the new Grade.

To later advance from d8 to d10, they must reach the new Threshold of 60 AP.

AP already spent are not recovered if the character decides to train a different ability.

16.4 · IMPROVING ATTRIBUTES

THE FOUR ATTRIBUTES ARE:

ATTRIBUTE	SCOPE
Strength	Physical power and resilience.
Technique	Precision, coordination and execution.
Spirit	Will and determination.
Cunning	Reasoning, strategy and mental readiness.

Attributes increase by spending AP according to the normal thresholds.

They do not automatically increase when the character receives an Upgrade.

The player must choose to invest part of their AP in them.

This choice involves a sacrifice: points spent on Strength cannot simultaneously be used to increase a Skill or a Technique.

ATTRIBUTES AND TECHNIQUES

The Attribute Grade determines the maximum Grade achievable by Techniques using it.

When an Attribute increases, linked Techniques do not automatically increase: the player can decide which to raise to the new Grade and which to keep at a lower Grade.

This increase requires no additional AP for the Technique.

For example, a character has d6 Technique and a personal d6 Technique. If the Technique Attribute rises to d8, the player can raise that personal Technique to d8: the Technique gains the Technique Die, Damage Die and Slots specified by the new Grade.

16.5 · IMPROVING TECHNIQUES

Racial and Custom Techniques do not grow through Ability Points of their own.

Its limit is determined by the Attribute used.

When that limit increases, the player can voluntarily increase the Technique's Grade up to the new available maximum.

Improving a Technique:

- increases the Technique Die;
- increases the Damage Die;
- increases available Effect Slots;
- makes the new Grade's effects accessible.

A Technique is not required to reach the permitted maximum.

Increasing Grade does not automatically add new effects: the Technique must be modified through the Builder.

16.6 · UPGRADES

An Upgrade represents a decisive moment in the character's growth.

UNIQUE TRAITS AND UPGRADES

When an Attribute and Skill meet the requirements of a Synergy, the corresponding Unique Trait becomes available. Unlocking is not acquisition. An available Unique Trait can be acquired using the normal Talent choice granted by an Upgrade. If several Traits unlock simultaneously, all become available, but each must be acquired separately (§16.9).

It can be granted at the end of a narrative arc, after an important feat or following an event that profoundly changes the pirate.

It is not automatically awarded after a predetermined number of combats.

The Game Master establishes when the story justifies an Upgrade.

16.7 · CAMPAIGN PACE

The total number of Upgrades is not fixed.

The Game Master establishes it considering the campaign duration and the main moments of the crew's growth.

In a long campaign, Upgrades can be distributed across many narrative arcs and accompanied by smaller amounts of AP.

In a short campaign, the GM can grant more AP with every Upgrade, allowing characters to reach high Grades in fewer sessions.

AP thresholds can be adapted at the start of the campaign and are editable in pirate management.

It is important for players to know the expected pace: investing 400 AP to reach d20 is a different choice in a campaign intended to last years than in a story lasting a few sessions.

16.8 · RECORDING GROWTH

Pirate management allows AP, dice, Upgrades and acquired Talents to be tracked.

SYNERGIES IN GROWTH

When the Grade of an Attribute or Skill increases, check whether the new value meets the requirements of one or more Synergies. Traits meeting the requirements are recorded as available. A Trait is recorded as acquired only after a valid choice is spent. If a Trait is an Evolution, the new benefit replaces the previous one and does not stack with it (§16.9).

When a character advances, update the relevant values and check whether the new die makes further options available in the Talent Tree or Technique Builder.

Opening new options does not mean automatically acquiring them. Prestige Talent choices open at Prestige I, III and V of the Role Skill; at Saikyō, possessed Talents improve without a fourth choice. Spirit has three separate choices. Enhancements of other Attributes follow their respective compatibility and do not consume Role choices.

A Technique can reach d12 without d12 effects having been selected yet. A Role Skill can reach d20 without the character having obtained the Ultimate.

The sheet must represent what the pirate has actually learned, not everything they could theoretically learn. When an evolved version of a Role Talent is acquired, even in ordinary progression, the previous version is no longer separately usable. It remains acquired as a prerequisite and retains only benefits incorporated in the evolution; bonuses, costs and limits do not stack. For Haki effects, however, the basic alternatives expressly specified by the Prestige Manual remain.

"It does not matter how far away the next island is. As long as there is a dream to chase and a crew to share the sea with, the journey continues."

16.9 · UNIQUE TRAITS AND SYNERGIES

Unique Traits reward the development of the sixteen Skills through Synergies between Attribute and Skill. They are distinct from Role Talents and unlock automatically when the stated requirements are met.

16.9.1 · SYNERGIES

A Synergy is a specific combination of an Attribute and a Skill. Each Unique Trait directly states the pair and Grades needed to make it available.

16.9.2 · UNLOCKING AND ACQUISITION

When both Attribute and Skill reach the required Grades, the Unique Trait unlocks automatically. No narrative feats, special Game Master authorisations or use counters are required.

Unlocking a Unique Trait does not mean acquiring it automatically. An unlocked Unique Trait can be acquired using the normal Talent choice granted by an Upgrade.

A Skill does not have to be a Role Skill to participate in a Synergy. A higher Grade automatically meets a lower requirement. If several Traits unlock simultaneously, all become available; each must be acquired separately.

16.9.3 · STACKING AND EVOLUTIONS

Unique Traits can stack with one another, even when using the same Attribute or Skill. If a Trait is indicated as an Evolution of another, the new value replaces the previous one rather than adding to it.

Normal limits on Advantage and Disadvantage continue to apply. Traits grant no additional Actions, Bonus Actions or Reactions unless expressly stated.

16.9.4 · RELATIONSHIP WITH TALENTS

A Unique Trait must not fully reproduce the effect of an existing Talent, Signature, Role Trait, racial ability, Haki effect or Prestige ability unless exceptions are expressly allowed in the catalogue. If a future revision creates a direct overlap, the Unique Trait is modified. Perfect Shadow's overlap with the Sniper's Shot from the Shadows is expressly allowed.

16.9.6 · DETAILED CATALOGUE

ATHLETICS

MONSTROUS BODY

Type: Passive · Requirements: Strength d12, Athletics d10

Your Passive Defence increases by +2.

The bonus stacks with other applicable modifiers to Passive Defence.

LIVING FORTRESS

Type: Passive · Evolution of Monstrous Body · Requirements: Strength d20, Athletics d12, Monstrous Body acquired

The Passive Defence bonus granted by Monstrous Body becomes +4.

The +4 replaces the previous +2 and does not stack with it.

ACROBATICS

SUPERHUMAN REFLEXES

Type: Passive · Requirements: Technique d12, Acrobatics d10 · Limit: once per round

When an attack against you misses your Passive Defence, you can immediately move 2 m.

The displacement is part of the Trait, uses no Reaction and does not provoke Reaction attacks caused by moving away.

GHOST STEP

Type: Passive · Requirements: Technique d20, Acrobatics d12

When your Active Defence succeeds, you can immediately move up to half your Movement.

The displacement is part of the Trait and does not provoke Reaction attacks caused by moving away.

OBSERVATION

EYE OF THE OPPONENT

Type: Passive · Requirements: Cunning d12, Observation d10 · Limit: once per round

After a creature you can see makes an attack, you gain +2 to your next Active Defence against that creature before the start of your next turn.

The bonus applies to the Active Defence result, not Passive Defence.

OPENING PREDATOR

Type: Passive · Requirements: Cunning d12, Observation d12 · Limit: once per turn

When an enemy consumes their Reaction, your next attack against them before the end of the turn gains Advantage.

IMPREGNABLE MIND

Type: Passive · Requirements: Spirit d12, Observation d10

You gain Advantage on Spirit Saves made to resist fear, intimidation or mental coercion.

The Trait does not create a Save against effects that do not allow one.

STEALTH

SILENT STEP

Type: Passive · Requirements: Technique d12, Stealth d10

When a Stealth Check is required while you are moving at no more than half your Movement, make the Check with Advantage.

PERFECT SHADOW

Type: Passive · Requirements: Cunning d12, Stealth d12

When you make an attack against a creature that has not detected you, that attack gains Advantage.

Limit: once per turn.

SURVIVAL

WILD TOUGHNESS

Type: Passive · Requirements: Strength d12, Survival d10

You gain Advantage on Saves required by heat, cold, exposure and other physical environmental dangers.

The Trait does not automatically cancel environmental effects that do not allow a Save.

NOT YET

Type: Passive · Requirements: Spirit d20, Survival d12 · Limit: once per encounter

When you fail a Strength or Spirit Save against a Status, you can increase the result by +2 after seeing the roll.

If the new result reaches the Threshold, the Save succeeds.

COMMUNICATION

SILVER TONGUE

Type: Passive · Requirements: Cunning d12, Communication d10 · Limit: once per scene

When you fail a Communication Check made to persuade, negotiate or deceive, you can repeat the full roll.

You must accept the second result.

OVERWHELMING PRESENCE

Type: Passive · Requirements: Spirit d12, Communication d12

Make Communication Checks used to command or intimidate with Advantage.

MEDICINE

CLINICAL EYE

Type: Passive · Requirements: Cunning d12, Medicine d10 · Limit: once per scene

When you achieve a success with a +4 margin on a Medicine Check made on a creature, your next Medicine Check on the same creature in the scene gains Advantage.

The benefit ends after the Check or at the end of the scene.

SURGICAL HAND

Type: Passive · Requirements: Technique d12, Medicine d12 · Limit: once per treatment

When a medical effect you use requires one or more dice to be rolled to determine HP recovered, you can reroll one of those dice.

You must accept the new result.

MECHANICS

MECHANICAL GENIUS

Type: Passive · Requirements: Cunning d12, Mechanics d10

Make Mechanics Checks used to identify a malfunction or understand how machinery works with Advantage.

WATCHMAKER'S HAND

Type: Passive · Requirements: Technique d12, Mechanics d12

When a Mechanics Check uses Technique as its Attribute, add +2 to the Check result.

The bonus applies only to Mechanics Checks actually based on Technique.

NAVIGATION

SENSE OF COURSE

Type: Passive · Requirements: Cunning d12, Navigation d10 · Limit: once per voyage

When you fail a Navigation Check, you can repeat the full roll.

You must accept the second result.

NO SEA CAN STOP ME

Type: Passive · Requirements: Spirit d12, Navigation d12 · Limit: once per voyage

When you fail a Navigation Check with a margin between -1 and -3, you can treat the margin as 0.

The Check is then treated as a barely successful result.

EXPLORATION

PERFECT ORIENTATION

Type: Passive · Requirements: Cunning d12, Exploration d10

Make Exploration Checks used to orient yourself, find a route again or determine a direction with Advantage.

EXPLORER'S STEP

Type: Passive · Requirements: Technique d12, Exploration d12 · Limit: once per turn

You can ignore up to 3 m of natural Difficult Terrain for Movement purposes.

The ignored stretch of terrain is crossed as normal terrain. Remaining Difficult Terrain follows the ordinary rules.

NATURE

NATURALIST INSTINCT

Type: Passive · Requirements: Cunning d12, Nature d10

Make Nature Checks used to recognise animals, plants, weather phenomena or natural dangers with Advantage.

CRAFTING

MASTER ARTISAN

Type: Passive · Requirements: Technique d12, Crafting d10

When you achieve a success with a +4 margin on a Crafting Check to make an object, the time required for that creation is halved.

The Trait does not reduce the object's materials, costs or requirements.

INVENTOR

Type: Passive · Requirements: Cunning d12, Crafting d10

Make Crafting Checks used to design or modify an object with Advantage.

CARPENTRY

HEAVY HAND

Type: Passive · Requirements: Strength d12, Carpentry d10

Make Carpentry Checks in which moving, holding in position or working heavy components is the main difficulty of the work with Advantage.

STRUCTURAL EYE

Type: Passive · Requirements: Cunning d12, Carpentry d10

Make Carpentry Checks used to identify damage, failures or weak points in a structure with Advantage.

COOKING

ABSOLUTE PALATE

Type: Passive · Requirements: Cunning d12, Cooking d10

Make Cooking Checks used to identify ingredients, spoilage or preparation errors with Advantage.

COOKING OF THE SOUL

Type: Passive · Requirements: Spirit d12, Cooking d12

When a dish you prepared recovers Stamina, every creature receiving that recovery gains +1 additional ST.

A creature can receive this bonus only once from the same meal.

ART

PERFECT HAND

Type: Passive · Requirements: Technique d12, Art d10

When an Art Check uses Technique as its Attribute, make the Check with Advantage.

STAGE PRESENCE

Type: Passive · Requirements: Spirit d12, Art d10

When you achieve a success with a +4 margin on an Art Check before an audience, the first Communication Check you make towards that same audience in the scene gains Advantage.

The benefit ends after the Check or at the end of the scene.

ARCHAEOLOGY

HISTORICAL CONNECTION

Type: Passive · Requirements: Cunning d12, Archaeology d10

Make Archaeology Checks used to connect an artefact, location or inscription to information the character already knows with Advantage.

The Trait does not provide knowledge the character does not possess.

16.9.7 · REFERENCE TO PRESTIGE

Synergies do not gain new Traits at individual intermediate Prestige Grades. When both components of the same Synergy reach Saikyō, that pair can make only one Prestige Unique Trait available according to the Prestige Manual rules. The Prestige Unique Trait catalogue will be defined separately; this rule does not automatically assign a new effect.
